Revue canadienne des sciences de l'administration

Canadian Journal of Administrative Sciences

The Canadian Journal of Administrative Sciences **is a bilingual (English and French) multidisciplinary quarterly which publishes refereed scholarly articles and book reviews in all areas of business administration. It is the publication of the Administrative Sciences Association of Canada and the only journal in administration linking the Canadian academic community across disciplines.**

CJAS **is interested in publishing empirical, theoretical and conceptual papers which represent a significant contribution to knowledge in all areas of administrative science. Manuscripts reporting research findings from both the private and public sectors are considered appropriate and, although preference is given to those dealing with Canadian data, other manuscripts deemed to be of interest to Canadian academics will also be published. Manuscripts are accepted for review with the understanding that they have not been submitted for publication elsewhere. Presentation of a paper at a professional conference does not disqualify it from consideration.**

Manuscripts should be sent to:

Journal of Literary Semantics

An International Review

ISSN 0341-7638

Editor: Trevor Eaton
Academic Headquarters:
Language Centre,
University of Kent
at Canterbury/England

The aim of the **Journal of Literary Semantics** is to concentrate the endeavours of theoretical and applied linguists upon those texts traditionally classed as 'literary' in the belief that such texts are a central, not a peripheral, concern of linguistics.

The journal publishes articles on all aspects of literary semantics; articles of a philosophical nature attempting to relate the study of literature to other disciplines, such as psychology, neurophysiology, mathematics, history; articles dealing with the educational problems inherent in the study of literature.

The journal will also publish reviews of books whose subject matter is germane to literary semantics. Books for review should be sent to the Editor.

J.L.S. appears in annual volumes, each volume consisting of an April and an October issue.

LEGAL STUDIES FORUM: An Interdisciplinary Journal

The *LEGAL STUDIES FORUM*, the official journal of the American Legal Studies Association, is published to promote humanistic, critical, and interdisciplinary research and teaching in legal studies, with a non-exclusive focus on common law. Published quarterly and employing a blind review selection process, the *FORUM* presents imaginative, provocative articles that approach the study of the legal system from a non-technical and value-conscious viewpoint. Articles are predominantly essays about the legal system, but space is allocated to articles about legal pedagogy in non-professional legal studies programs. Occasional thematic issues address topics in the *Forum's* range of interests; recent symposia have included "Law and the South African Legitimacy Crisis" and "Legal Reelism: The Hollywood Film as Legal Text." This journal also reviews recent books that seek to present philosophical, historical, linguistic, and critical perspectives on law and the operation of the legal system.

Manuscripts and other submissions should be sent to David Ray Papke, Editor, *Legal Studies Forum*, Indiana School of Law - Indianapolis, 735 W. New York Street, Indianapolis, IN 46202.

Reviews and books for review should be sent to James Foster, Review Editor, *Legal Studies Forum*, Dept of Political Science, Social Science 307, Oregon State University, Corvallis, OR 97331.

Requests for subscription should be sent to Leonard G. Buckle, Managing Editor, *Legal Studies Forum*, 341 Cushing Hall, Northeastern University, Boston, MA 02115. Subscription rates are $50 US in North America and $60 US for overseas delivery.

Applications for membership in the American Legal Studies Association should be sent to Suzann R. Thomas-Buckle, Executive Director, American Legal Studies Association, 339 Cushing Hall, Northeastern University, Boston, MA 02115. Members' dues (including a copy of the *Forum*) are $32 for one year, $60 for two years and $84 for three years.

(Incorporating the Journal of Research Communication Studies)
An International Journal for all Quantitative Aspects of the Science of Science, Communication in Science and Science Policy

Aims and scope
This periodical aims at publishing original studies, short communications, preliminary reports, review papers, letters to the editor and book reviews on scientometrics. The topics covered are results of research concerned with the quantitative features and characteristics of science. Emphasis is laid on investigations in which the development and mechanism of science are studied by means of (statistical) mathematical methods. The journal also intends to provide the reader with important up-to-date information about international meetings, schedule of events in scientometrics and related fields. Appropriate bibliographic compilations are published as a separate section.

he view that acceptance of a psychological theory is a matter of rhe- cal analysis instead of evidential justification is examined & found nting. Distinctions are made between: (1) a to-be-validated theory & theory underlying evidential data, (2) prior & evidential data, (3) experimental research vs theory-corroboration experimentation, & a descriptive characterization & the criteria underlying the charac- ization. Acceptance of a scientific theory should not be determined by nconceptual criteria. The idea that observation is theory-dependent or it a descriptive characterization may be culture-dependent does not der impossible (A) objectivity, (B) science's being value-free, or (C) dependent justification for accepting a theory or using a descriptive aracterization. Nor should unqualified intelligibility be the criterion of good explanatory theory. 2 Tables, 1 Figure, 52 References. AA opyright 1993, Sociological Abstracts, Inc., all rights reserved.)

There is a well-established tradition in structural semiotics to stress two levels of meaning–surface & deep-structural–the latter of which is discussed here. At the deep-structural level of meaning, topological localization of formal symbols is used as an ansatz for the development of a formalization of syntagmatics & paradigmatics. The topology of the localization of the symbols imposes well-defined constraints on the semantic schemes. Here, some remarkable consequences are developed in the domain of "ultimate meaning" in the field of human behavior & social sciences. The development of the theory stresses denegation as a necessary step in the syntagmatic process that leads from actual understanding toward a higher level of understanding. It would follow that the furthest point one can reach in a search for the ultimate meaning will have the character of a "neutral term." 2 Figures, 19 References. ¶ Through a critique of psycho-oncology, it is argued that social science has lost awareness of the fact that it is a moral discourse, presenting claims about the nature of suffering & the proper response to suffering. The discourse of psycho-oncology is contrasted with that of first-personal illness narratives to suggest what is missing in (1) the aggregation of ill persons' experiences as data, & (2) therapeutic practice that is ancillary to medical treatment. A hermeneutic stance in both research & therapy is advocated over scientific objectivism, & narrative is proposed as a basis of reconstituting research & therapy. 37 References. ¶ The poor state of methodology in cultural sociology is deplored. The absence of common underlying principles forces schools in this area to rely on their own individual understanding of basic principles. Methodology should best be seen as the implementation of concepts. An example of the meaningful combination of various research methods is provided in *Forschungsarbeiten in den Sozialwissenschaften 1990: Dokumentation* ((Research Works in the Social Sciences 1990: Documentation) Bonn: Informationszentrum Sozialwissenschaften, 1991), describing a comparative study of youth culture in Austrian, German, & Hungarian villages. Key variables include local history, standard of living, values, & integration into local & national structures. Adapted from the source document. ¶ The accuracy of children's self-reports & parent reports on academic achievement during grades 1-12 is examined, drawing on questionnaire & archival longitudinal test data for a sample of 1,118 children & adults in Iowa as part of a larger family study on dyslexia. The validity of retrospective reports about the self, & parental reports about offspring, were tested by comparing survey responses to actual test scores. Analyses indicate that historical information on school achievement was adequately valid, but the accuracy of such information varied with Ss' gender, age, & whether they had been low or normal achievers in school. Multiple-regression analyses suggested that for self-reports, accuracy was higher for females, normal achievers, & people in the middle age range. For parent reports on offspring, accuracy improved if the child was in the middle age range & was a normal achiever. Implications of these findings for future clinical practice & developmental research are discussed. 6 Tables, 21 References. Adapted from the source document. ¶ Though quantification is increasingly important in sociological analysis, its use remains limited. The relation between social study & the power of numbers is not clear. Analyzed here are epistemological & ethical applications of the production of quantitative knowledge: in the classification of persons, in the analysis of their work or consumption, & in opinion polls. Harding, Sandra (U Delaware, Newark 19716), **Rethinking Standpoint Epistemology: What Is "Strong Objectivity?"**, UM *The Centennial Review*, 1992, 36, 3, fall, 437-470.

¶ Standpoint epistemology is one of the striking contributions that has emerged from reflection on the research processes through which some of the most important feminist work in the natural & social sciences has been produced. Here, standpoint is distinguished first from empiricist theories of knowledge, & then from several alternatives to empiricism to which it is often wrongly linked: ethnocentrism, relativism, pluralism, & identity politics research. The subject/agent of knowledge & the "strong objectivity" generated by standpoint epistemology are contrasted with the subject of knowledge & only weak standards for maximizing objectivity characteristic of empiricist epistemology. ¶ Rhetorical reference points, most of which can be categorized as either moralist or instrumental, help make sense of the world & also make manageable the information available to us. Here, moralist & instrumental rhetorics are compared with respect to how they shape political debates. It is argued that both types of rhetoric share common values, including economic well-being, a sense of moral worth, & confidence in the survival of future generations. However, both are also dangerous because they close off discussion. It is suggested that both be taken into account when setting up political institutions, letting all parties have their say. L. ¶ Reflections are offered on the criteria used in assessing scientific work. Ten commonplace theses (eg, that capitalism, &/or socialism, &/or industrialism are causing the present planetary crisis, not science) regarding science are examined, & the degree to which the relationship between science & its public varies over time is discussed. Strategies for democratizing science are offered. 47 References. W. Howard

¶ Explored is the possibility of grounding psychological research in Husserlian phenomenological epistemology. It is shown that mainstream academic psychology privileges natural-scientific descriptions of the world over subjective experience, which explains why much psychological research is carried out using a physicalist framework. Here, it is maintained that the natural-scientific description of the world is a construction, which presupposes a subjective life-world experience. A phenomenological analysis of consciousness (ie, intentionality) as the subject matter of psychological research is offered, along with a phenomenologically based approach to decision making. It is concluded that psychology ought to eschew attempts to explain conscious experience in terms of causal laws. 57 References. Adapted from the source document.

¶ The use of quantitative data & multiple tests of hypotheses in political science causes chance to play a significant role in shaping the results. Here, recent statistical work on the likelihood of coincidences is reviewed, & findings are applied to common problems of data analysis in political science, eg, significance testing, model specification, & dummy variable analysis. Several ways that statistical results can appear to be meaningful when they are not are illustrated, & remedies that aid in the assessment of the true probability of the improbable in research results are suggested. 3 Tables, 42 References. ¶ The standard representation theory of measurement takes real numbers as a pregiven numerical domain. Here, an alternative approach is presented based on an abstract concept of a procedure of measurement, & "values of measurement" are understood in terms of such procedures. The resulting "type approach" makes use of elementary model-theoretic notions & emphasizes the constructibility of scales. It is used to ground discussion of issues typically neglected by the standard framework, eg, the relation between measurement & computation. The approach is, however, perfectly compatible with the modern representational theory of measurement & helps elucidate issues central to that theory, eg, the role of Archimedean axioms. 39 References. Schick, Frederic (Rutgers U, New Brunswick NJ 08903), **Liberty, Equality, and Diversity: Some Reflections on Rorty**, UM *Social Research*, 1992, 59, 2, summer, 297-314.

¶ Though Richard Rorty's work is abstruse & focused on the writings of his fellow philosophers, it has a vast nonphilosophical following. Here, questioned is what general message his nonprofessional readers draw from him, how closely this approximates Rorty's intentions, & how persuasive the message is when it becomes clear. Rorty claims that no language is better suited for reporting the world than any other. Some readers may find in this idea a kind of relativism, but Rorty explicitly rejects that. The heart of his appeal seems rather to be his conviction that languages are incommensurable & that no genuine argument is therefore possible about the issues that most divide people. Rorty's theory of irony is meant to counter the fear that communication between the users of different languages is also rendered impossible. However, though languages are, in one sense, incommensurable, neither communication nor argument is thereby excluded, & the new concept of irony is fortunately not needed. AA

(GER)

¶ To investigate how the problem of nonresponse complicates data analysis, a secondary analysis is performed on interview data (N = 2,355) from an ALLBUS study conducted in 1980 in the former West Germany. Nonresponse, especially refusal, is a key methodology problem in surveys. Weighting procedures are often used to make up for the resulting bias; however, they assume that the weighting classes are homogeneous. Moreover, these assumptions are seldom stated explicitly, much less tested. It is shown that quota sampling & "proofs of representativeness" share similar assumptions. Examination of the ALLBUS study shows that the central assumptions behind the weighting procedures are not tenable. Simulations of mechanisms that generate missing data illustrate the impossibility of making adjustments for the nonresponse bias with standard procedures. 2 Tables, 10 Figures, 47 References. Stivers, Camilla (Graduate Program Public Administration Evergreen State Coll, Olympia WA 98505), **Reflections on the Role of Personal Narrative in Social Science**, UM *Signs*, 1993, 18, 2, winter, 408-425.

¶ In an examination of relationships among personal narrative, feminism, & postpositivist social science, it is argued that the existence of competing social science paradigms has several implications: (1) The observer cannot be removed from the knowledge process; if so, the subjective knowledge in personal narratives is respectable even in social science. (2) Awareness of paradigms validates the contextuality of personal nar-

rative & supports feminism's case against universalization. (3) The boundary between fact & interpretation is permeable; therefore, personal narrative is not an anomaly in social science. (4) Paradigms do not make knowledge a matter of personal whim; knowers are members of knowledge communities whose rules they must respect. (5) Although paradigms imply that there is no "truth" that transcends all sets of definitions, there can be "better" knowledge in the sense of stronger support for the projects of feminism. Feminists should aim for more inclusive knowledge communities rather than truth. AA

¶ A substantial proportion of current research on the experimental psychology of time is conducted with animals, & a large body of data & theory derived from animal studies has been collected. Here, the usefulness of such data & theories for understanding human timing is considered. Limitations include: some human timing phenomena are outside the scope of investigations with animals, for both psychological & methodological reasons; & even when data from humans & animals are similar there is no guarantee of similarity of psychological processes. Nevertheless, some examples of the fruitfulness of animal/human timing comparisons have been found in areas of interval production, judgements of stimulus duration, & memory for duration. 1 Figure, 48 References. Barsh, Russel Lawrence (American Indian Studies Center U Washington, Seattle 98195), **Measuring Human Rights: Problems of Methodology and Purpose,** UM *Human Rights Quarterly,* 1993, 15, 1, Feb, 87-121.

¶ In 1991, the UN Development Program unveiled a ranking of countries by "human freedom," based on scales compiled by Charles Humana (*World Human Rights Guide,* New York & Oxford: Facts on File Publications, 1986). The resulting storm of diplomatic criticism forced the agency to discontinue formal ratings for the present, but stimulated interest in human-rights measurement. After reviewing the conditions for reliability & validity in social science measurement, & critiquing a number of comparative studies based on "freedom" or "democracy" scores, it is argued that satisfactory objective measures for human rights cannot be constructed, & that subjective scales based on perceptions of freedom & participation would be more useful in dealing with practical concerns, eg, improving the quality & effectiveness of international aid. ¶ Three studies of differences in the frequency estimates obtained from interval & noninterval measures are reported. In Study 1, 774 shoppers were asked to give both interval- & noninterval-based estimates of their shopping frequency; the former yielded significantly higher estimates. In Study 2, 1,112 credit card holders from a large department store completed mail surveys of their frequency of credit purchases. Interval & noninterval measures over 3 time frames were obtained, & the former consistently yielded significantly higher mean estimates. In Study 3, 426 undergraduate business students were asked to use interval & noninterval measures to estimate cookie purchases. Direct & indirect measures, measures using different operationalizations of the interval measure, & estimates over a 1-month & a 3-month time frame were obtained. Overall, interval measures produced significantly higher estimates of mean frequency than did noninterval measures. 3 Tables, 17 References. D. Generoli

¶ The survey behavior of a group of women was compared across 2 mail surveys to examine the possibility that refusers may have different predispositions toward mail survey participation than other types of nonresponders or responders. The sample for the second survey, on survey participation, included all the nonreturners (N = 108), refusers (N = 43), & 50% of the respondents (N = 191) to a previous survey about personal finances. Results suggest that refusers do indeed differ from both responders & other nonrespondents with regard to survey participation. Almost 90% of previous responders responded again, while 55% of previous refusers refused again. Of the previous nonresponders, almost 60% responded to the second survey, while approximately 30% again did not. 2 Tables, 4 References. Modified AA

¶ Personal experiences of researching affinal relationships between women are drawn on to explore the dynamics of the research interview. A critique of feminist literature on interviewing is offered, focusing on the participatory model as a research method that seeks to tap subjective knowledge. Assumptions pertaining to friendship between women researchers & respondents are challenged, & power & control in interviews are examined, arguing that interviews are fluid encounters in which the balance of power shifts as the interaction unfolds. It is concluded that the subjective experience of women researchers is crucial to the research process. Implications for feminist research are discussed. 27 References. ¶ Examined is how an experiment is qualitatively affected when the interviewer & interviewee know, or come to know, each other during the extensive interviewing process. A topology of potential social relations in intensive interviewing is defined: (1) the stranger dyad, which assumes unfamiliarity; (2) the web of relevance, in which participants know each other indirectly; & (3) the web of group affiliation, in which participants are part of the same primary group. It is concluded that, although valid data can be produced through intensive interviews, the effects of familiarity are often problematic, & therefore should be subjected to closer scrutiny. 1 Figure, 42 References. ¶ Results of a mail survey of 790 owners of small construction subcontracting companies are used to examine whether large monetary incentives can significantly increase the response rate. The sample was divided into 7 groups, each of which received either a cash amount or an offer of a $50 check to be sent once the questionnaire was returned. These groups were compared against each other & against a control group that received no incentive. Results indicate that: $1 markedly response rate over the no incentive control condition; the response rate increased as the incentive amount increased; there was an insignificant difference in response rates between the $5 check & $5 cash groups; & the promise of $50 did not result in a significantly higher response rate than the control group. A cost-benefit analysis of the incentives is offered. 3 Tables, 29 References. Adapted from the source document.

¶ Despite substantial methodological differences, cognitive psychologists & survey researchers, prompted by the call for research on memory in more naturalistic settings & the paradigm shift that gave cognition prominence over behavior, began to collaborate in the late 1970s & early 1980s. Their collaboration gave rise to research such as autobiographical frequency & magnitude estimation, cognitive interviewing techniques, experiential memory, influence of response alternatives on responses, memory for dates & events, question comprehension, question order & wording effects, & response order. The collaboration benefited cognitive science by providing ecologically valid conditions for theory testing & creating opportunities to replicate laboratory findings in field surveys. ¶ The response strategy of providing satisfactory, but not the best, responses to survey questions requiring substantial mental effort is examined. The practice, termed "satisficing," can take the form of selecting the first response alternative that seems reasonable, agreeing with assertions, endorsing the status quo, not differentiating in the use of rating scales, having no opinion, & mental coin flipping. Conditions that encourage "satisficing" include task difficulty, lack of respondent ability (including cognitive sophistication), experience, preconsolidated attitudes, & motivation. A formula for combining the main effects of task difficulty, ability, & motivation is discussed. 151 References. D. Generoli

¶ Donald B. Rubin's method for subjectively estimating the effect of nonignorable nonresponse in sample surveys ("Formalizing Subjective Notions about the Effect of Nonrespondents in Sample Surveys," *Journal of the American Statistical Association*, 1977, 72, 538-543), sometimes called the mixture modeling approach to drawing inferences from self-selected samples, is reviewed & applied to real survey & experimental data on community standards for sexually explicit material. Because respondents of 2 experiments (N = 109 & 75, respectively) were asked to judge the video material's appeal to prurient interests & patent offensiveness, it is crucial to ascertain whether the sample self-selection process through which individuals express willingness to participate in the experiment effectively ensures that the results are biased & inaccurate. The application of the mixture modeling approach illuminates the possible extent of such experimental biases. 4 Tables, 19 References Adapted from the source document.

Special attention is paid to the motivation of respondents (Rs), including situational effects, external influences, interactions, timing, allocation of resources, & pinpointing of responsibilities. Application of oral history techniques reveals inconsistencies among Rs as to the time & conditions of the educational expansion. The movement toward educational expansion goes back to the era of great coalition governments & a consensus between two powerful parties. Unintended effects on responses to 4 knowledge items on the NES resulted when "Don't Know" responses were probed. ¶ To conduct more efficient telephone surveys, a commercial file of directory-listed residential telephone numbers can improve sampling depending on characteristics of the file. Two designs (a dual-frame & stratified frame) have increased telephone contact with residents. Examined are characteristics of commercial lists at the national & several regional levels. Proportions of duplicates in list frames, comparisons between list frame & RDD (random digit dialing) residential numbers, %s of missing data in list frames, & distribution of zip codes are examined. List-assisted designs in rural areas are problematic. Specific primary sampling units had listing rates that were lower than expected. 9 Tables, 15 References. Adapted from the source document.

¶ An investigation of the impact of macrosocial structures on microsocial phenomena, eg, personal networks. The extent to which personal networks are shaped not only by private decisions, but also by the political & economic environment, is addressed, illustrated by describing ego-centered networks in the former German Democratic Republic & their changes after the political turnover, & relating them to macrosocial conditions under the former regime & the new political system. Results of a 1991 pilot study are presented, & plans for research in 1992 & 1993 are described. It is concluded that the structure & functions of personal networks will change drastically. ¶ Cognitive processes involved in responding to surveys are examined via health survey questionnaire data from 24 Ss recruited through newspaper advertisements & flyers. Problems encountered in the questionnaire include: (1) inability of S to understand terminology; (2) attentional & comprehension problems produced by long lists of response categories, (3) variability in encoding or interpretation of key terms; (4) biasing of S's decision processes, due to effects of question ordering; & (5) requests for information or beliefs the Ss did not have or could not retrieve. Specific examples of problems discovered & changes made to alleviate them are discussed. 2 Tables, 1 Figure, 26 References. D. Generoli

¶ In spite of the importance of photography to industrial societies, there have been no attempts to include photographers in the development of visual sociology. Here, a new qualitative method of photo-inquiry is used in an experiment in which 15 young workers were asked to take pictures of objects in their homes that they valued either positively or negatively. The photographed objects were classified by content analysis & classified by correspondence analysis. Examples with matching verbal utterances were placed into aesthetic, utilitarian, or symbolic groups. The results provide a good beginning for the development of a sociology of objects. 2 Tables, 1 Figure, 11 Photographs, 57 References. Adapted from the source document.

¶ The Dutch Central Bureau of Statistics recently devised a new statistical measure of community urbanness, based primarily on the degree of concentration of social & economic activity in a given area. The degree of intensity of activity is determined by the number of addresses per unit area. The first publication to appear using this new index was C. J. den Dulk's, H. van de Stadt's, & J. M. Kang, Heejoon (Graduate School Business Indiana U, Bloomington 47405), **A Composite Model for Deterministic and Stochastic Trends**, *International Journal of Forecasting*, 1990, 6, 2, July, 175-186.

¶ While it is the conventional practice to detrend for deterministic trends or to difference for stochastic trends in order to induce stationarity in nonstationary macroeconomic time series, a composite model incorporating a special case transfer function (TF) analysis is required when these time series contain both classes of trends. Inputting either linear or quadratic trend variables into a TF will produce an accurate forecast of nonstationary trended time series. A comparison of such a TF with a univariate autoregressive integrated moving average (ARIMA) technique applied to 14 US economic series shows that the TF analysis is a better forecasting & representation technique. In another empirical test in Monte Carlo, the forecasts resulting from the application of ARIMA accounting for trending/differencing together are less indicative of a trend than the TF model. 3 Tables, 15 References. An estimation procedure that can fit both one- & two-factor latent riable models for binary & polytomous variables is presented. Two examples composed of four categorical variables are provided that illustrate the applicability of two-factor latent variable models in small data sets, & comparisons with latent class models are drawn. Two additional examples include two large data sets with 40 binary & 29 five-category variables, which generate interpretations demonstrating that latent variable models are capable of analyzing large data sets for both binary & polytomous variables. It is concluded that the new algorithm is much faster given careful & efficient programming, & that latent variable models with higher latent dimensions can also be fitted by straightforward generalizations. 2 Tables, 6 Figures, 36 References. A recent survey of simulation studies (Hauck, W. W., & Anderson, S., A Survey Regarding the Reporting of Simulation Studies," *The American Statistician*, 1984, 38, 214-216) concluded that most do not report rationale for the decision regarding the number of Monte Carlo iterations, & many studies are conducted with an insufficient number of iterations to achieve satisfactory statistical conclusion validity. Here, hypothesis-testing logic is applied to objectively determine the exact number of iterations necessary to confidently detect departures from robustness in Monte Carlo results. A list of the number of iterations necessary to detect departures from a series of nominal Type I error rates is included. 1 Table, 10 References. Adapted from the source document. ¶ It is argued that traditional ANCOVA assumptions beyond those required for ANOVA are unnecessary. The problem posed by the most common violation of traditional ANCOVA–heterogeneity of dependent variable on covariate regression coefficients across treatments–is considered, as is the relationship between linear modeling & ANCOVA. A hypothetical experiment involving the comparison of memory performance for differently encoded words is used to describe & illustrate the amelioration of problems due to covariate-treatment covariation by heterogeneous regression ANCOVA. Various parametric alternatives to the traditional ANCOVA are also presented, & the relationship between the psychological & the mathematical model is considered. 2 Tables, 3 Figures, 75 References. Comments, 179-197, **Reply**, 199-201.

¶ It is argued that while recent reports point to significant gaps in economic statistical data, a longer historical view of the statistical system demonstrates that the problem is not new & that recent factors–budget cuts, lack of coordination & leadership, & noncompetitive federal salaries–account for only a small part of the problem. Corrective actions that can be taken by agencies are explored: (1) increase capabilities for research & analysis; (2) construct better mechanisms to integrate disparate data sets; (3) use professional advisory groups more effectively; & (4) improve both the quantity & quality of measurement research. In three **Comments on "The Federal Statistical System's Response to Emerging Data Needs" by Jack E. Triplett**, F. Thomas Juster (U of Michigan, Ann Arbor) argues that Triplett's solutions are inappropriate because he fails to appreciate just how difficult rational decision making about resource allocation on statistics has become; Burton Singer (Yale U, New Haven, Conn) applauds & extends Triplett's analysis by describing current controversies that could be solved if Triplett's policy suggestions were implemented, & by listing items that should be part of an academic research agenda; & Fritz Scheuren commends Triplett for pointing out that statistical agencies should accept the blame for at least some of their shortcomings & considers Triplett's prescriptive suggestions from the viewpoint of a data producer. In **Reply**, Triplett contends that, while Scheuren's & Singer's arguments are wholly compatible with his own, Juster's seeming disagreements are more apparent than real because he is arguing a different dimension of the same problem. Triplett agrees with Juster that the ability to foresee data needs is by definition impossible, yet he cautions that the limits of what can be done have not yet been approached. 18 References. M. Comment, 31-34, **Reply**, 35-36.

¶ Previous sociological research on earnings has emphasized the "control & command" properties of jobs, meaning that reward-relevant properties of jobs derive from a particular position in a hierarchical structure that dispenses authority rights according to human & capital assets. Here, several leading specifications of ownership & domination dimensions of jobs, including Erik Olin Wright's Marxist class typologies (eg, see *Classes*, London: Verso, 1985), are tested using a version of the Cox specification test for comparing separate, nonnested models. The dimensional specifications & Wright's typology are all found to be inadequate. Results point to a newer, more plausible & parsimonious alternative model–the incentive contract specification. In **Typologies, Scales and Class Analysis: A Comment on Halaby and Weakliem's "Ownership and Authority in the Earnings Function"**, Wright (U of Wisconsin, Madison) states that the choice of a dimensional or scalar strategy vs a typology strategy for predicting earnings depends on the precise analytical question that is being asked. Categorical variables, as in typologies, are generally better-suited to the theoretical objectives of class analysis. In **Reply to Wright**, Halaby argues that Wright's typology specifications do not fully account for the explanatory power in the earnings-generating relational properties of the classes of capital & labor. 3 Tables, 25 References. ¶ In Masahiko Aoki's *Economic japonaise. Information, motivation, et marchandage* ([The Japanese Economy. Information, Motivation, and Marketing] Paris: Economica, 1991), two business organization models are contrasted: the hierarchical model (A) characterizing US business, & the cooperative model (J) representing Japanese business. Rather than take a culturalist approach to organizational differences, it is suggested that classical contingency theories underlie his analysis. Model A performs better in either a stable or extremely turbulent environment, while model J is best in a relatively turbulent setting. In contrast to his use of *deterministic contingency theories, which detract from* the overall framework, his theoretical explanations of the cooperative model are a valuable contribution to business sociology. Factors necessary to the cooperative model are discussed. It is also argued that the ideal societal-based business organizational model will feature a bureaucratic & a cooperative model. 34 References. AA Tr & Modified by J. ¶ A response to the criticism by Grant Blank (see SA 40:4/92Y9472) that sociological computing has not yet demonstrated its potential. A review of the literature in the field easily refutes the claims that sociological computing ignores learning outcomes & substantive problems in research & teaching, offers little evidence of its efficacy over other traditional learning methods, & has not convinced other sociologists of its potential. Sociological computing gets little respect, not because it has not proven its benefit, but because of the difficulty of assessing learning achievement. In Rejoinder to George H. ¶ An evaluation of automatic forecasting software, reviewing the features of 13 forecasting packages that perform single-equation methods on time-series data. It is contended that though the software can provide substantial & reliable assistance to the practitioner in the selection of appropriate specifications for extrapolative models, it provides little assistance in tasks involving the evaluation & presentation of forecasts & the appropriateness of introduction of causal variables. Studies in Philosophy and Education is an international quarterly journal that focuses on the philosophical, normative and conceptual problems and issues in educational research, policy and practice. As such, *Studies in Philosophy and Education* is not the expression of any one philosophical school or cultural tradition. Rather, the journal promotes exchange and collaboration among philosophers, philosophers of education, educational and social science researchers, and educational policy makers throughout the world. Contributions that address this wide audience, while clearly reflecting standards of philosophical excellence, are encouraged. In this regard, the journal also welcomes contributions of philosophical interest from non-philosophers in the educational and social science community. Topics may range widely from important methodological issues in educational research as shaped by the philosophy of science to substantive educational policy problems as shaped by moral and social and political philosophy.
In addition, single issues of the journal are occasionally devoted to the critical discussion of a special topic of educational and philosophical importance. There is also a frequent Reviews and Rejoinders' section, featuring book review essays with replies from the authors.

Studies in Philosophy and Education is indexed/abstracted in *Sociology of Education Abstracts, Revue Philosophique de Louvain, Australian Education Index, Sociological Abstracts, Philosopher's Index, the International Bibliography of the Social Sciences.*

Preface, 697-699.
In Preface, Gary T. Marx (U of Colorado, Boulder) reflects on the val-: of thirty years of sociological methods, concepts, & research findings the current state of the field. Gans suggests that sociology does not ave much of a collective memory, & what it has is predominantly theo-tical, evidenced in the worship of Emile Durkheim, Karl Marx, & Max Veber. A bibliographic analysis of sociological research in 4 fields from e 1920s to the 1980s suggests that researchers' attention span is very ort the majority of references date from the decade immediately prior publication, & only about 20% are 3+ decades old. Various explana-ions for this are proffered, & it is concluded that sociology is not grow-ng as it should & must incorporate a disciplinewide historical emphasis. Table, 15 References. ¶ Introduced is a diagram designed to help students distinguish between categories, attributes, values of variables, & variables themselves. Two examples are offered: (1) statement of association between values (eg, "old people are conservative"), with the implicit variables of age & political ideology, & (2) statement of hypothesis linking variables in a specific relationship (eg, "age is relatively related to conservativism"). The first example points out to the students that the association between vaviables implies nothing about the relationship between any other values of either of the variables. A graphic presentation of possible hypothesized relationships between variables is presented. 2 Figures, 2 References. I. Shagrir (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ The critical theory of the Frankfurt school is examined, with focus on its dialectical conception of history & method of critique, which is analytically separated into five dimensions: descriptive, immanent, defetishizing, crisis theory, & utopian. The analysis reveals that this method of critique is amenable to a variety of pedagogical approaches & is an excellent procedure for generating critical thinking about society. Through the process of critique, students are able to view their own personal lives as connected to the historical development of society & are thus prepared to meaningfully participate in it as citizens. 28 References. ¶ The writing-across-the-curriculum approach proposes that writing is an integral part of the thinking & learning process. Based on teaching experience in an introduction community/human services class, the effectiveness of the approach is examined. The main tool used in the class was the dialogue notebook, a personal binder divided into 4 sections: (1) freewrites, (2) lecture notes & notes on readings & site visits, (3) letters, & (4) newspaper articles with commentaries. Students used the dialogue notebook in group discussions & for final papers. Despite initial resistance, over time most students found the method advantageous. ¶ An organizing framework that links theories to a common concern or explanatory logic is often useful in sociology courses that present a large number of theoretical models & concepts. Through a discussion of how an integrating theme can be used in courses in complex organization & organizational theory, it is shown how the unique capacities & nature of the human (or labor) factor of production–as a conscious, reflective, & reactive organizational input–have posed difficulties & dilemmas for both organization theories & managerial strategies of control. ¶ In a discussion of how an "AIDS (acquired immune deficiency syndrome) & Society" course might be structured, examined is: (1) how to introduce the topic to students on the first class meeting, (2) the course requirements, & (3) how each requirement is designed to address the pedagogic goals. Potential pitfalls in teaching about AIDS in the sociology classroom are reviewed. A brief critique of the course's success in past semesters is provided, based both on the professor's perceptions of the course & on students' comments in their end-of-the-semester evaluations. 1 Appendix, 48 References. ¶ Scale data obtained at 2 times (pre- & mid-semester) from 421 students at a southeastern college were used to examine whether violations

that are incongruent with student expectations are significantly different than congruent violations of expectancy in relation to student ratings of instruction. Analysis using the Scheffe' post-ANOVA test revealed that Ss having high expectations/high experiences evaluated teachers more favorably than those with low expectations/high experiences, low expectations/low experiences, & high expectations/low experiences. Reasons why these findings do not coincide with the expectancy violation model are offered. 3 Tables, 25 References. Adapted from the source document. ¶ Methods of teaching & learning gender politics in the college classroom are explored. Most of the strategies require a class with fewer than 35 students. Assignments include requiring students to keep a class journal, small group discussions, role play, & drawing pictures. Magazine articles, other popular culture media, & newspapers help students explore issues of the course content, eg, language & communication, love, friendship, division of labor, eating disorders, pornography, & violence against women. Promoting understanding of power & authority, trust, & solidarity in the classroom are also discussed. 27 References. Adapted from the source document. ¶ An experimental strategy used in an introductory sociology course is described that aimed to combine the basic premises of Buddhism with an ethnomethodological strategy of decoding ordinary societal norms. Students were asked to stand & do nothing for ten minutes in busy places. The experiment targeted the central sociological question of where society ends & the self begins. Students' experiences during the exercise are described. The experiment was conducted in conjunction with readings on basic sociologial concepts, eg, the social construction & accomplishment of human identity & social order. 17 References. I. ¶ An "Un-TV" experiment was conducted in an introductory sociology course to teach the concepts of mode of consumption, socialization, & media & culture consumption. Students were asked to: (1) count TV technical events for 10 minutes; (2) watch 10 minutes of any show without sound; & (4) watch TV for 30 minutes without turning it on. Students' viewing experiences are described, & it is concluded that TV serves mainly as an advertisement-delivery system, & that its most important message is the medium itself. 11 References. I. ¶ Ways in which organizational environments vary & influence students in graduate professional school are examined, using interview data from 25 US sociology graduate program advisors & questionnaire data from 566 graduate students. The analysis employs human capital, social integration, & tournament models to assess that impact of the graduate program on students' grade point averages (GPAs), standardized test scores, & professional success. Findings indicate substantial variation in the contributions of the 3 student outcomes. Ethnicity, GPA, program interruptions, rates of participation in doctoral programs, & level of professional aspirations add to group variations & become important filters in graduate training. Individual ability models only partially predict student success, with the prestige level of the department & student grades having no consistent effects. Department resources are apparently crucial in understanding graduate student professional activity & aspirations for academic & private-sector careers. 7 Tables, 37 References. ¶ Three approaches to teaching the sociology of food, eating, & nutrition are disussed: (1) teaching sociological theories & methods applicable to these topics; (2) teaching critical thinking on dilemmas of food production, consumption behaviors, & nutritional outcomes; & (3) teaching nutritional sociology courses designed for professionals. In each group, a volunteer keeps discussion in focus & another volunteer records the group's work. A whole class reflection follows the group discussion. Students are required to select a text, read & analyze a portion each day for a month, & write a summary of norms. Examples of analysis of Bible & Koran passages on norms & moral authority are discussed. ¶ Alfred Cort Haddon was one of the academically trained natural scientists who became involved with anthropology in the 1890s in GB. His background in zoology allowed him to introduce into British anthropology a new style of ethnographic research, which incorporated data collection techniques & analytical methods from biology. Here, it is argued that Haddon used biological metaphors as heuristic models to understand anthropological problems. He took exemplars or puzzle-solutions from biology & applied them metaphorically to what he considered analogous situations in anthropology. Thus, he compared, eg, the life cycle of species with the life history (ie, origin, evolution, & decay) of artistic designs. Through these comparisons Haddon attempted to approach anthropological puzzles on the basis of his practical experience as zoologist, using similar fieldwork techniques & analytical principles. 18 References Modified AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Baba, Yasuo, Transliterated title not available (Dialogue: A Reexamination of the Habermas-Luhmann Discussion), *Soshioroji*, 1988, 32, 3, Jan, 43-62. (JPN)

¶ An attempt is presented to clarify Niklas Luhmann's theory of self-referential systems in *Soziale Systeme* ([Social Systems] Frankfurt: Suhrkamp, 1984) & other works. In *Der philosophische Diskurs der Moderne* ([The Philosophical Discourse of Modernity] Frankfurt: Suhramp, 1985) & other works, Jürgen Habermas argues that Luhmann misuses the concept "reduction of complexity," & that what Luhmann actually refers to is systems of cultural meaning. Habermas's criticism, however, is invalid, because any system achieves contact with its environment only through a process of circular closure. Luhmann's theory also functions self-referentially as its own object through this same process of closure. Ultimately, it may be concluded that a theory cannot see what it cannot see. Science can only deliver more knowledge, not better knowledge. Thus, science must operate within the framework of a dialogue instead of dictating in the forms of a monologue. Habermas was also incorrect in maintaining that Luhmann's theory is nothing but social technology. 5 Figures, 30 References. Adapted from the source document. ¶ A view of anthropological history is advocated that takes into account the historical perspectives of its protagonists. An examination of Alfred Reginald Radcliffe-Brown's history of anthropology (eg, see *Method in Social Anthropology: Selected Essays of A. R. Radcliffe-Brown*, Chicago. U of Chicago Press, 1958) reveals that he saw anthropology as having two origins: one in the eighteenth-century Enlightenment & the other among the nineteenth-century evolutionists. He saw his own place in history in contrast to the German geographical tradition transplanted to the US by Franz Boas. He was not as much a follower of the French sociological tradition as is often supposed. Rather, he sought to reconstruct the history of anthropology in order to establish his own, earlier lineages. 71 References. ¶ The recent development of an analysis of gender in the sociology of economics draws on reactionary trends in ideological & cultural studies. Using a selective reconstruction of some US theories of sexual difference, & the primarily English debate on class & gender, discussion is focused on the explanatory power of the gender variable in the collective identity formation of working women & the gendered division of labor. These theoretical models for the sociology of work usually limit themselves to standard conceptions of female (F) identity, suggesting that the F pattern is defined as a departure from the male norm. An outline of future study issues is proposed that embodies a modified theory of gender. 50 References. Adapted from the source document. D'Amico, Robert, Karl Popper and the Frankfurt School, UM *Telos*, 1990-1991, 86, winter, 33-48.

¶ The infamous "methodology dispute" between Karl Popper & Theodor W. Adorno is examined. Popper's writings on political theory, philosophy of social science, & philosophy of history are reviewed, & it is shown that the most significant distinction between Popper & Adorno is that the former finds a distinction between truth & ideology. Popper, moreover, argues that social theory produces explanations that maintain agency against physiological, biological, or behaviorist reduction. Adorno's position on the methodology of social analysis is examined via an analysis of critical theory's original formulation as spelled out in Lukácsian Marxism. It is concluded that the basic difference between Adorno & Popper is that Adorno sees critical theory as a fetter from which humanity will ultimately be freed, whereas Popper views critical thinking as the single variant of rationality & as a strategy against the appeals of utopianism, dogmatism, & absolutes. ¶ In "Philosophie des Geldes" ([Philosophy of Money] in *Gesamtausgabe* [Collected Works], Frankfurt: Otthein Rammstedt, 1989 [see IRPS No. 16/83c00220]), Georg Simmel remarked that in a money-oriented society, the value attached to various things is largely a function of their monetary value. This would imply that cheap things are accorded little value, while expensive items are held in high esteem. The value quality of an object for a given culture also bestows a value on the owner of the object. A higher price tends to lend a certain aesthetic quality to possessions, & permits the owner to join a more respected, exclusive circle. This principle can be seen today by the middle-pricing techniques of many merchandise chains. Many shoppers cannot afford items at the higher end of the price spectrum, yet they do not want to pay the lowest price possible because they think that the low price indicates low quality or low social esteem. Thus, paying a mid-level price represents a compromise. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

The second phase of TAS was sponsored by the American Sociological Assoc (ASA), under the successive guidance of several editors, each with differing priorities regarding the nature of the journal. Amid increasing conflict regarding content, *TAS* was dropped by the ASA Council in 1982. In 1987, *TAS* resumed publication under the sponsorship of Transaction Periodicals. Hahn, Alois, Überlegungen zu einer Soziologie des Fremden (Considerations on the Sociology of the Foreign), *Simmel Newsletter,* 1992, 2, 1, summer, 54-61. (GER)

¶ Proceeding from Georg Simmel's *Soziologie: untersuchungen über die Formen der Vergesellschaftung* ([Sociology: Studies on the Forms of Socialization] in *Gesamtausgabe* [Collected Works], Frankfurt: Otthein Rammstedt, 1992), attention is focused on the concept of what is considered by society to be foreign or alien. Foreignness is not an objective relationship between two persons or groups, but rather, a special type of attitude. It is not objective factors, eg, race or religion, that lead to the perception that someone is alien, but rather, historically changing meaning structures leading to labeling. Foreign is perceived as unknown, untrustworthy, new, & undiscovered. Although foreigners are often perceived negatively, that can also be viewed as a helpful resource. The category of the foreign continues to both fascinate & inculcate fear in the minds of the native population. Special attention is given to the way that alien categories, eg, foreigners, the handicapped, sexual minorities, other races, people with different belief structures can be perceived as a threat. M. ¶ In *The Protestant Ethic and the Spirit of Capitalism* (see SA 7.1/595444), Max Weber incorrectly interpreted the English word "calling" in his attempt to elucidate Puritan ideology. He did not consult original seventeenth-century English Bibles, but rather, the Biblical examples available in the *Oxford English Dictionary.* Moreover, he included an error from the dictionary exactly as printed, which could easily have been avoided by consulting an original Bible. Additionally, his interpretation of calling was based only on "I Corinthians" 7:20, inconsistent with his original claim of the influence of Martin Luther's translation of German *Beruf* (calling) that is found instead in "Ecclesiastes" 11:21, 22. As a result, Weber's argument became too abstruse. 16 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ That Indian sociology has remained fundamentally dependent on the

concepts of *varna, arama & purusartha*–which are supposed to encompass all Indian thinking about man & society, as well as to describe the actual lived reality of man & society in India from vedic times to the present–is undeniable. However, the question is raised of whether concepts are primarily descriptive, theoretical, or prescriptive, or some hopelessly intermixed combination. In addressing this question, it becomes clear that Indian sociology has failed to overcome the Western constructs that British attempts to "understand" Indian society inadvertently imposed on the empirical data. A contemporary counterscenario might explore who the Brahmans, Ksatriyas, Vaisayas, & Sudras are in modern Western society–an exploration that would render Western societies' theoretical & prescriptive constructs visible by suggesting that caste & varna, like class, are universal. 16 References. ¶ Proceeding from Hans Kelsen's *Der soziologische und der juristische Staatsbegriff: Kritische Untersuchung des Verhältnisses von Staat und Recht* ([The Sociological and Juridical Concept of the State: A Critical Study of the Relationship between the State and Law] Aalen: Scientia, 1981), a contrastive analysis is made with Georg Simmel's concept of society in *Soziologie: Untersuchungen über die Formen der Vergesellschaftung* ([Sociology: Studies on the Forms of Socialization] Berlin: Duncker, & Humblot, 1983). For Simmel, it was a fundamental fact of socialization that there exist many elements within a given unity; naturally, this includes pairs of opposite qualities. Special attention is given to the categories of attraction & repulsion & to the positive role of the negative. Simmel found argumentation & struggle to be just as important to society as are agreement & unification. ¶ An attempt is presented to provide a new definition of the modern discourse from the standpoint of sociology of knowledge. Special attention is given to Jürgen Habermas's *Der philosophische Diskurs der Moderne* ([The Philosophical Discourse of Modernity] Frankfurt: Suhrkamp, 1985) & his criticisms of Niklas Luhmann's *Soziale Systeme* ([Social Systems] Frankfurt: Suhrkamp, 1984) & Jacques Derrida's *L'Ecriture et la différence* ([Writing and the Difference] Paris: Minuit, 1967). Habermas's antipostmodernism & antifunctionalism, however, mask the agreement of his critical theory with Luhmann's systems theory & Derrida's deconstructionalism. Antipostmodernist criticism is also a social theory fitting within the postmodern sociocultural configuration. Habermas's theory of the communicative act should be compared with theories of autopoiesis & writing (French *écriture*) to search for basic conceptual & metasemantical similarity previously ignored in the literature. This would presuppose a recognition of the homogeneity engendered by the inner relationship of subjectivity & time. 38 References. Adapted from the source document.

¶ In 1989, the collapse of the former East German regime & of other communist governments & the resulting reunification of Germany drastically changed politics & society. After a short lag, changes could also be observed in sociology. The preoccupation with postmodernism gave way to the reconstruction of sociology at former East German universities, & raised issues of social inequality & other problems tied to the transformation process. In accordance with Volker Meja's, Dieter Misgeld's, & Nico Stehr's *Modern German Sociology* (New York: Columbia U, 1987), three national traits are distinguished: (1) the importance of theory, (2) criticism of modern society, & (3) persistent sociological self-reflection. This frame of reference is applied to theoretical discourse & empirical research, & the current crisis is shown to be the result of the transition from the impasse of working society to the uncertainty of a risk society. Concluding remarks concern the end of postmodernism & the return of history. 37 References. M. Meeks

Nedelmann, Birgitta, Ambivalenz als vergesellschaftendes Prinzip (Ambivalence as a Social Principle), *Simmel Newsletter*, 1992, 2, 1, summer, 36-47. (GER)

¶ An excellent example of Georg Simmel's analysis of ambivalence as a special form of social interaction is found in his "Die Koketterie" ([Flirtation] in *Philosophische Kultur* [Philosophical Culture], Berlin: Wagenbach, 1986 [1909]. First he analyzes female flirtatious behavior. Next, he shows how flirting is a special type of game. Finally, the level of abstraction of analysis is increased to show how flirting fits within the general framework of interactional forms. The role of emotions in regulating ambivalent interactional forms is investigated. One of the mechanisms for stabilizing primary emotions lies in the implementation of norms & social control. Flirtation provides examples of normalized standards attached to the display of primary emotions. 29 References. M. Meeks

¶ A survey of Italian sociology of economics studies, published 1950-1969, notes gender bias in the infrequent use of gender as a variable. The problem of a specifically feminine element in the cultural construction of social inequality was ignored. The women's issues addressed in research centered on their marginality in the job market & collective action. The changes in the forms of cultural legitimization for male dominance in the division of labor caused by industrialization compensated for the lack of change in gender-based family roles. While Italian economic sociology has increasingly incorporated gendered analysis, earlier studies suggested that women were subjected to the forces of industrialization & urbanization, & not considered on ability to act autonomously. 17 References. ¶ Questionnaire data from 168 sociologists representing 41 different specializations, randomly selected from the American Sociological Assoc's 1990 *Biographical Directory of Members*, are used to examine the degree to which sociologists adopt a theoretical perspective (eg, functionalism, Marxism) & to identify the kinds of factors that determine a sociologist's theoretical stance. The factors of age, gender, institutional affiliation, & political outlook are considered. Findings indicate that political outlook is the most powerful predictor of theoretical stance, with age a fairly close second. While there may be a slight tendency for women to be more attracted than men to symbolic interactionism, both women & men are equally likely to be conflict theorists, Marxists, functionalists, or eclectics, & to either embrace or reject biological factors as important determinants of behavior. Results support the view of those feminists who argue against essentialism & claim that there are no irreducible differences between women & men. 5 Tables, 23 References. Sulek, Antoni (Instit Sociology U Warsaw, PL-00-325 Poland), **The Rise and Decline of Survey Sociology in Poland**, UM *Social Research*, 1992, 59, 2, summer, 365-384.

Translated by Barbara Mlynarz-Pomorska.

¶ The survey method was absent in Polish sociological studies immediately after the war. However, in the late 1950s, after the breakdown of Stalinism, the method was imported from the West as the most scientific sociological method, suitable for studying subjective phenomena–the main subject matter of sociological research. The domination of the survey persisted until the 1970s, when antipositivist currents reached Poland & undermined the theoretical foundations of the survey method; later changes in society accelerated the decline of the survey. Rapid cultural & political changes were accompanied by the emergence of new categories of thinking; qualitative methods were better for grasping them. Nonsurvey methods of research were promoted, eg: participant observation of social movements, research into real behavior, & analyses of biographies of leadership elites. Many alternative social groups appeared, & these were also studied by nonsurvey methods, eg, via living with them, analyzing the texts they produced, & conducting interviews with their members. While these changes did not lead to the abandonment of surveys, the survey has ceased to be considered generally as the sole scientific method, but simply as one important tool used by sociologists. ¶ J. A. A van Doorn's *Beed en betekenis van de Nederlandse sociologie* ([Image and Meaning in Dutch Sociology] Utrecht, 1964) & other works won him the reputation of being an independent sociologist pursuing his own style distinct from the contemporary theoretical discourse of modern sociology. A literature review shows that, during the sociological crisis of the late 1960s & early 1970s, the agenda of modern sociology was heavily criticized. In contrast, during this stormy period, van Doorn's goals & conclusions changed little or not at all. In this light, the role of sociology between active social intervention & passive reflection is discussed. The importance of making room for an approach to sociology based on great sociologists rather than schools of ideas is stressed. 39 References. Adapted from the source document. ¶ Georg Simmel's "Zur Erkenntnistheorie der Sozialwissenschaft" ([On the Theory of Knowledge of Social Science] in *Gesamtausgabe* [Complete Works], Vol. 2, Frankfurt: Suhrkamp, 1989) & other works sought to delineate the boundary between sociology & other social sciences, but gradually came to the conclusion that the science of man turns into the science of society; ie, the study of the individual inevitably focuses on the relationship between the individual & society. The desubstantialization of the individual leads to historical, economic, & legal analyses showing the eminent role played by the social environment on the individual constitution or soul. Simmel maintained that other disciplines tried to proceed from presuppositions of individual traits independent of social influence. He sought to show that all character traits are essentially social in nature. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ Few studies have been written about the influence of Emile Durkheim's work on Ziya Gokalp's *Turkish Nationalism and Western Civilization: Selected Essays of Ziya Gökalp* (New York: Columbia U, 1959). A biographical sketch of Gökalp (1876-1924) sheds much light on the reception of Durkheim in Turkey. In 1909, just after the Young Turk revolution, Gökalp became a member of the Central Council of the Committee for Union & Progress, a revolutionary organization in Salonika, where he first came in contact with Durkheim, providing him with the theoretical & practical foundation for ardent nationalism. In 1912, he became the first professor of sociology at U Istanbul, working to unify the social sciences. After WWI, he was exiled to Malta, but he returned several years later to Turkey before the 1923 birth of the Turkish republic. Under his charismatic authority, Durkheim's sociology influenced the intellectual life of the general public, down to the introduction of Durkheim into the secondary school curriculum. 21 References. Yoshida, Jun, Transliterated title not available (Theory of Modernity as Criticism: A Change in Viewpoint from Habermas to Adorno), *Soshioroji*, 1989, 33, 3, Jan, 21-37. (JPN)

¶ A reanalysis of significant critical moments of aesthetic modernity in Theodor W. Adorno's *Aesthetische Theorie* ([Aesthetic Theory] Frankfurt: Suhrkamp, 1970), which was ignored in Jürgen Habermas's *Der philosophische Diskurs der Moderne* ([The Philosophical Discourse of Modernity] Frankfurt: Suhrkamp, 1985). The early critical theory of the Frankfurt school, represented by Adorno, saw the transcendent moment of art as the intelligent potential for modern culture, the privileged point of reference. Habermas criticized this approach for losing the normative position of criticism, since he perceives cultural modernity within a narrowed scope of vision limiting the empirical analysis of society. Thus, he treates science, morality, & art as three differentiated aspects of communicative rationality. However, the critical moment in modern art remains unclear, reducing criticism to the language of validation claims for a given presupposition. In contrast, Adorno regards the musical avant garde as a model for critical thinking, with its appearance of intersubjective language & self-reflexive tonal system. Finally, the implications of the category of identity are investigated for both sociologists. 15 References. Adapted from the source document. ¶ French sociologist Alain Touraine supported the efforts of the Allied Coalition in the Gulf war, saying the war should be fought to the end. By contrast, French sociologist Pierre Bourdieu, opposed the "drunken war-mongering." Contradictions among sociologists claiming leftist, radical, & revolutionary alignments suggest problems in the definition of sociology. Western writers tend not to see any reciprocity between the two forces. Touraine converts the sociologist of action into the oppressive ideologue. At every turn, the West asserts the construction of law over terror. If the ideologue's war-mongering could be equated with sociology, US President George Bush would be history's greatest sociologist. J. A review of the methodology used in Max Weber's series of essays on the "Business Ethic of the World Religions" (1918-1920) demonstrates his sociological & historical perspectives. Although incomplete in the global spectrum of religions, Weber compares Confucianism, Taoism, Buddhism, Hinduism, & ancient Judaism, highlighting their practical ethics. He suggests reasons why the West has produced both practical rational conduct exemplified in ascetic (classic Puritan) Protestantism & modern capitalism, while the East has not. Clarke in the interpretation of unlawful driving behavior ("Crime Specialisation, Crime Displacement, and Rational Choice Theory" in Wegener, H., et al, *Criminal Behaviour and the Justice System: Psychological Perspectives,* New York: Springer, 1989) & their call for more information on why offenders commit particular offenses, data from nonrepresentative samples of British drivers are analyzed: (1) 457 drivers who completed self-report questionnaires, 66 of whom were also interviewed; (2) 226 pub patrons who were interviewed; & (3) 110 drivers stopped by the police for exceeding speed limits, whose reasons for their driving actions were explored. It is concluded that the main propositions of the rational choice perspective are largely supported in respect to unlawful driving, but that even the concept of limited rationality may be overstating the position in some instances. ¶ A discussion of the city as a historical phenomenon, with focus on the case of Rome, Italy. Considered are: (1) the classical city as form, ie, a coherent whole in which nothing can be changed or added without calling into question the entire city; & (2) the glutinant city, ie, the modern industrial & commercial city as a productive & distributive center, to which new neighborhoods & satellite centers can be added without having to rethink & reorganize the whole metropolis. It is contended that the city is not only a built area, or an ecological unit, as the Chicago school maintains, but a universe made up of a multiplicity of dialectical systems, or subsystems, each providing for the basic social functions, from the reproductive (the family), to the production & distribution of goods (the economy), to the collective rules (the state) & ethical norms (educational systems & religious organizations). ¶ Using the terminology of Karl Marx, one can define the phenomenon postmodernism reflects on, taken as a whole, as the process of replacing concreteness with abstraction, or as the tendency toward complete takeover of use-value by exchange-value. What sets the social system into movement in capitalist society is mere quantity, which can only tolerate quantitative, not qualitative, differences. Capital is quantity, which has no inner quality; commodities & use-values belong to quality. The present day represents the continual ripening of capitalism, horizontally & vertically. The vertical reach of capitalism is the technical innovation that leads to what Marx defined as the real subsumption of labor power: the labor force is now deprived of the means of production, from both a juridical & a utilization point of view. Labor, devoid of inner sense & vitality, is best expressed as abstract labor. Abstraction moves & gives life to the concrete world, but is hidden by it. In this respect, there is no gap between modernist & postmodernist times. The postmodern reality is seen as a set of juxtapositions, a kaleidoscope of individuals & things that appear as figures in a space without time, forms deprived of roots & history, self-sufficient in their vivid & suggestive exteriority. This is because, at the heart of production, there is only time without space, ie, an absolute quantity that, in the absence of any qualitative difference, can only valorize itself & increase. 21 References. Fisk, Milton (Indiana U, Bloomington 47405), **Poststructuralism, Difference, and Marxism,** *Praxis International,* 1993, 12, 4, Jan, 323-340.

¶ Poststructuralism is examined in relation to the declining significance of Marxism as a political ideology, arguing that poststructuralism's commitment to a philosophy of difference is misguided. Poststructuralism's potential to fill the ideology void left by Marxism is assessed, & its politics of uncentered difference is contrasted with the Marxist emphasis on solidarity & praxis. It is concluded that poststructuralism's dependence on a philosophy of difference, along with an incapacity to adequately theorize the process by which unity might be achieved through difference, makes it unlikely that poststructuralism will replace Marxism as the paramount emancipatory discourse. ¶ Rational choice theory is becoming increasingly prominent in the social sciences. Its application to empirical studies, however, is somewhat problematic. Success depends on the type of decision model chosen, which can be either sequential or simultaneous. Also important are methods for operationalizing the theory, eg, choice & formulation of consequences, gauging utilities & probability, & judging the dimensions & relative importance of consequences. Illustrative empirical examples are provided, & various forms of operationalization & their theoretical implications assessed. 5 Tables, 57 References. Adapted from the source document.

¶ The development of sociology's antipsychological bias has prevented interdisciplinary-motivated growth in the field, especially in the analysis of real life experiences. The psychological & the social are intimately linked in the complex processes involved in social problems, love, identity conflicts, & mental health. From the clinical sociology perspective, these processes can inform an existential, personal, & affective redefinition of sociology. Here, focus is on resolving problematic methodological & theoretical issues of objective observation from the participant's subjective viewpoint. While real life experience must have some conceptual basis, sociological investigation must avoid abstractions. 22 References. Adapted from the source document.

¶ Despite numerous concords with the rest of his works, the conference given by Emile Durkheim at Auteuil (Paris, France) stands out due to a permanent & original plea for public & honest consciousness. Durkheim bases his approach on the ordinary meaning of the incommensurability or moral values to define the two essential characteristics of moral code, ie, obligation & transcendent goodness; he places his case in the faith for the sacred to substitute society for God. Here, Durkheim's 1910 unpublished manuscript "L'Enseignement de la morale à l'éole primaire" ((Teaching of the Moral Code in Primary School) see abstract in SA 41:3) is considered a double reconstruction for the use of the students at the Ecole Normale: a sociological translation of the ordinary conception of morality & a school translation of moral sociology. 18 References. ¶ Andre Gunder Frank's "Development of Underdevelopment" (*Monthly Review,* 1966, 18, 4) & other works occupied a central position in advancing the theory of Third World dependency among Latin American intellectual circles during the period after the Cuban revolution. He

was one of the first scholars to question the assumptions of the UN Economic Commission for Latin America, & of the concept of self-sustaining economic growth spreading from the US to poorer countries. Instead, he postulated that underdevelopment was not a stage on the road to development, but rather, a necessary corollary to the accumulation of wealth in more advanced nations. Additionally, he adhered to Marxist concepts in his analysis of the dichotomy between the center & the periphery, appropriation & expropriation, & continuity & change. A literature review shows that Frank is criticized for methodological determinism & for describing postcolonial Latin America as a capitalistic system, when it was actually closer to feudalism. Thus, his idea that the growth of capitalism can only exacerbate the current problems is called into question. The historical impact of his paradigm is assessed. 65 References. M. Meeks

Thus, many centuries before the advent of the Calvinist work ethic, there already existed an efficient industrial culture. Although Max Weber never traced capitalist roots back to the twelfth-century Cistercians, he did mention the role of monasticism in the rise & development of modern capitalism in several works. 10 References. ¶ In "Formale Rekonstruktion und vergleichende Rahmung soziologischer Theorien" ([Formal Reconstruction and Comparative Framework of Sociological Theories] see SA 40:1/92Y2598), J. Kluver attacks the problem of the systematic comparison of theories, suggesting a scheme for their reconstruction in connection with the ongoing discussion of micro vs macrotheories. ¶ A formal typology of poverty paradigms is presented to clarify the concepts & ideological assumptions that ground modern theories of poverty. A theoretical "space" that maps the metatheoretical themes that inform current debates on poverty is constructed, & several recent works on poverty (eg, Ellwood, David, *Poor Support: Poverty in the American Family* [see IRPS No. 43/88c00971] & Wilson, William Julius, *The Truly Disadvantaged: The Inner City, the Underclass, and Public Policy* (Chicago: U of Chicago Press, 1987]) are discussed to point out their implicit ideological contents. The typology encompasses accounts of poverty from Malthusian economics, the Marxian paradigm, neoclassical economics, secular Malthusianism, social Darwinism, & the programmatic poverty perspective. It is shown that the typology's utility derives from its ability to formally categorize extant paradigms of poverty & account for new eclectic approaches. 4 Figures, 52 References. W. Howard

¶ A neo-Kantian explanation of Max Weber is attempted with the goals of: establishing the origin of Weber's work & his place in intellectual history, contrasting his thought & methodology with neo-Kantianism, & discovering his structural principle & its interpretive key. Proceeding from Ernst Troeltsch's *Der Historismus und seine Probleme* ([Historicism and Its Problems] Tübingen, 1922), German historiography & political economy are examined, revealing some differences between Weber's own research & his theory of social cognition. His neo-Kantianism can only be formulated in a logically elaborated language of the scientific theory of a distinct historical period. His chief methodological achievement was to emancipate sociological & historiographical theory from their dependency on philosophy, resulting in their opening to contemporary pragmatism & pluralism. 18 References. ¶ Sociological action theories stress the dichtomy between action & system in the sense of mutual restriction. As such, the actor can be introduced as an independent agent to overcome the narrowness of system theory. However, such criticism does not grasp the underlying propositions of the theory of autopoietic systems. In studying how social entities are constituted, Niklas Luhmann's *Soziale System: Grundrisse einer allgemeinen Theorie* ([Social Systems: Outline of a General Theory] Frankfurt: Suhrkamp, 1984) sees action as a result of autopoietic systems unified by the selective perception of the environment through the social mechanism of implication. If actions are understood as functional artifacts that are parts of the system per se, then the action & system can be viewed in a mutual relationship. Additionally, it becomes clear that Luhmann is not far from Max Weber & other sociologists who use meaning as a core category to develop concepts of socially generated actions. 52 References. Several formulations of multicultural materialism are assessed, & the significance of dialogism in multicultural materialist studies is discussed. F. Muller Juristischer Verlag, 1989 [see listings in IRPS No 68]). A positive appraisal is offered of Lübbe's work, which fits squarely within the movement to achieve a reconstruction of Max Weber's legitimation theory. She attempts to show that Weber's concepts of legality & legitimacy are neither circular nor illogical, & to illustrate how the theme of legitimacy is applicable to legal sociology, philosophy, & sociology Breuer's book presents a very different approach, focusing on elements of Weber's sociology of religion as it relates to issues of social domination. Although both these books seek to address the typology & hierarchy of rational categories in Weber, they arrive at very different analyses. Czybulka's work contends that as long as government bureaucracy persists as a means to achieve control & as an instrument for legitimizing that control, questions of legitimacy should be examined separately from those of legality. ¶ It is argued that democracy & its institutionalized formal-legal versions can no longer harbor utilitarian claims & stresses issuing from the social sphere. Drawing on the work of Karl Marx, the necessary preconditions for democracy & the constitution of democratic subjects are discussed, & an account of plural democracy is given. A discussion of the rise of democratic conservatism is facilitated by a brief critique of Francis Fukuyama's "The End of History?" (see SA 38:5/90X0149). Other issues explored are: the naturalization of democracy by rights, democratic providence, procedural democracy, why democracy is an unachievable goal, & achieved conservative democracy through organizations. It is speculated that, given the turmoil in the disunited Americas & Europe, a utilitarian as well as a nonutilitarian disenchantment with democracy could bring about its demise. W. Howard

This review examines both authors' postmodern, antimetaphysical approaches to progressive social philosophy & legal analysis. While both are historicist liberals committed to the contingency of self, unlike Jürgen Habermas, Rorty is an ironist. Optimistic for growth in liberal democracies, Rorty pragmatically defends his ironic liberalism, in contrast to Michel Foucault. Although Habermas would reject it, Rorty insists on an aesthetic approach to liberal culture, incorporating poetry & language. Admired only for his efforts in the Brazilian critical legal studies movement, Rorty draws from Roberto Unger in asserting the irreconcilability of the public & private self & the ubiquitousness of politics. Stanley Fish points out parallels between the poet John Milton & Unger's theological discourse amidst academic legal studies. According to Fish, Unger's metaphysical, essentialist preoccupations limit the effectiveness of his social change project. Fish is theoretically aligned with the genealogical thought of Friedrich Nietzsche & Michel Foucault. Habermas's ideal communication is unsuccessful in Fish's view. 15 References. J. Sadler

¶ An analysis of George Herbert Mead's *Movement of Thought in the Nineteenth Century* (Chicago: U of Chicago Press, 1936) & other works shows that dialectic lies at the core of his thought, & that self-reference is his key problem. For Mead, dialectic is the perpetual problem-solving process of reality. The person or individual subject who solves the problem becomes an "I," whose creativity cannot be denied, because the true problems cannot be solved without first finding a new solution. Mead's dialectic introduces duration & contradiction into reality, justified by the verification of a special relativity theory. Later in his career, however, Mead developed his theory of the social genesis of mind & self through voice, in contradiction to his earlier ideas. 3 Figures, 16 References. ¶ Differentiation theory & its variant proposed in Niklas Luhmann's *Soziale Systeme: Grundrisse einer allgemeinen Theorie* ([Social Systems: Outline for a General Theory] Frankfurt: Suhrkamp, 1984) are questioned from the standpoint of internal logic & functioning of specialized domains in modern society. Differentiation theory ignores the extent to which such domains depend on heterogeneous language games & practices in performing their tasks, & does not address how functional differentiation is simultaneously sustained & substituted by structural forms cutting across specialization boundaries & creating social arrangements orthogonal to functional specialization. Differentiation theory does not reflect the cultural production of closed & open practices in modern society, thereby promoting an essentialist rather than constructionist interpretation in contradiction to its own principle of societal self-organization. An alternative theory of practice is offered based on empirical research in various scientific disciplines. 45 References. Adapted from the source document.

¶ A review of the economic & political reforms in the People's Republic of China that eventually led to the demonstrations in & around Tiananmen Square in June 1989. Using the work of John Rawls (*A Theory of Justice*, Cambridge, Mass: Belknap Press, 1971), it is contended that the pace of economic reform led also to demands for political emancipation. It is also observed that as Western positivist principles were tacked onto a Stalinist edifice, a number of major dilemmas & contradictions developed; eg, as the market was freed up, the political rights of many were denied. Social freedoms, so important in Rawls's theory of justice, were subsumed within the need to get the economy functioning. Rawls's two principles of justice are used to argue that the process of change in China neglected fundamental rights & open access to the bureaucracy for all. With the clampdown on political rights in 1989 & the rise of neoauthoritarianism, Chinese political reform failed to take note of the emotional needs of the people. Implementing Rawls's first principle of justice might have brought about free elections in China; but reformers were disturbingly apolitical & neglected to develop a yardstick of justice. ¶ Cultural variables have motivated the recent rehabilitative moves by some critics rectifying the unilaterally negative appraisal of Marshall McLuhan's communications process theories (eg, see *Culture Is Our Business*, New York: Ballantine, 1970). Examining some of the unfavorable criticism, it is noted that McLuhan's writings have been factually misrepresented, berated by a rational & empirical analysis using deductivist & inductivist techniques, or assessed in a dialectical materialist perspective. Most of the negative criticism mentions his difficult & disjointed prose style. Several key themes emerge from McLuhan's sympathetic critics: poetry & jest, general theory, holism, binary perception, exploration/explanation, or demystification. Neither pro nor con critical stances have established a standard interpretation of his work, leaving an unintelligible critical legacy. While both positions note the wide-ranging influences in his work, each reflects the general critical climate 1967-1981. ¶ It is argued that Sigmund Freud's first concept of transference grew out of the debates in late nineteenth-century France & Germany as to what made a person susceptible to suggestions. After reviewing the positions of both the Salpêtrière & Nancy schools on this issue, Freud's position in the debate is examined. It is argued that Freud's 1895 notion of transference as a false connection developed from this intellectual context. 47 References. AA

¶ A review article on a book by William Corlett, *Community without Unity: A Politics of Derridian Extravagance* (Durham, NC: Duke U Press, 1989 [see listing in IRPS No. 68]). Corlett offers a systematic articulation of Jacques Derrida's thought in relation to social theory, with informative excursions on liberal political philosophy, communitarianism, & cultural critics, eg, Alasdair MacIntyre. Corlett's core concern involves rethinking the notion of community in light of the work of Michel Foucault & Derrida's treatments of time & historicity. Rhetorically compelling & politically provocative, Corlett's book is lauded for applying Derrida's approach to the history of ideas to liberal culture, & for articulating a unique notion of community that emphasizes extravagance over reciprocity. ¶ An exploration of Michel Foucault's *Discipline and Punish: The Birth of the Prison* (Sheridan, Alan [Tr], New York: Vintage Books, 1979) focuses on the notion of "self-overcoming" & the way that the text itself constructs the conditions under which the energy that informs it is reflexively used to engender new modes of thought. A detailed exposition of salient themes in the text is offered, with consideration given to three modes of production of individuality: hierarchical observation, normalizing judgment, & examination. It is contended that the validity of Foucault's text is compromised as a result of the unattainability of truth; this, however, is not enough to tarnish the book's Dionysiac celebration of freedom & power through self-overcoming. ¶ An introduction to a symposium held on the occasion of the Twenty-Fifth International Congress of Psychology in Brussels (Belgium) offers a brief history of psychological treatments of temporal experience, focusing on the work of Paul Fraisse. A prominent research topic in experimental psychology for nearly half a century, interest in the psychology of time all but disappeared by 1915, except in the French-speaking countries of Europe. Interest was revived, however, in 1957 when Fraisse published his seminal monograph *Psychologie du temps* ([Psychology of Time] Paris: Presses Universitaires de France). Fraisse's book not only inventoried the first century of research on time, but also renewed worldwide interest in the domain of psychological time. Since the publication of Fraisse's monograph there has been a steady rise in published studies, & the field of experimental psychology has taken the lead in studies of temporal experience. ¶ Georg Simmel, in "Wie ist Gesellschaft möglich?" ([How Is Society Possible?] in *Soziologie: Untersuchungen über die Formen der Vergesellschaftung* [Sociology: Studies of Socialization Forms], Berlin: Duncker & Humblot, 1968), examined the fundamental critical problem of the social sciences & historical consciousness. The elements that he accepts a priori are not cognitive features but rather synthetic-active components of real processes. Norbert Elias's *Che cos'è la sociologia?* ([What Is Sociology?] Turin: Rosenberg & Sellier, 1990) & other works pose the same question of reconciling how society is possible with how a science of sociology can be constructed. For Elias, the internationalization of sociology is the key to understanding the new way in which sociology will function in the postindustrial world. In this light, special attention is given to his concept of the mirror effect. It is concluded that the answer to the question of how society is possible must be answered in a new, unique way by each succeeding generation. 21 References. M. Meeks

¶ Focus is on contemporary interpretations of subjectivity & their ethical & political implications. Responding the the feminist critiques of John Rawls's social contract theory presented by Seyla Benhabib & Susan Moller Okin (see, respectively: "The Generalized and the Concrete Other" in Kittay, Eva Feder, & Myers, Diana T. [Eds], *Women and Moral Theory*, Rowman & Littlefield, 1987, 154; & "Reason and Feeling in Thinking about Justice," *Ethics*, 1989, 99, 229), each of which disputes Rawls's premises regarding the nature of subjectivity, it is argued that these critiques deal inadequately with a constellation of inherited dichotomies separating reason with feeling, abstraction from particularity, & individuality from relationship. The notion of covenant is suggested as an effective tool to reconstruct a subject especially torn between individualist & relationist camps. The substance of the convenant paradigm is discussed, tracing it through the Jewish, Puritan, & US constitutional traditions. Criticisms & consequences of a covenant-based theory of the subject are considered, in part through comparison with the metaethics of methodologies of several contemporary feminist philosophers & legal theorists. Pearce, Carole (U Zimbabwe, Mount Pleasant Harare), **African Philosophy and the Sociological Thesis**, *Philosophy of the Social Sciences*, 1992, 22, 4, Dec, 440-460.

¶ The contention that there exists an African philosophy is shown to be self-defeating & contradictory. The African intellectual's critique of earlier studies by ethnocentric, Western-oriented anthropologists incorporates a similar segregation of African & Western worldviews. Trapped by the fallacy of misplaced concreteness, pan-Africanist black Bantu thinkers, eg, Kwame Nkrumah, K. Gyekye, K. Wiredu, & P. J. Hountondji, assert the radical proposal equating ethnophilosophy with philosophy, on a linguistic, cultural, or social basis; but this conflation merely cancels out any meaningful attempts at philosophy or empirical investigation. The misinterpretation common in the Western sociology of Ludwig Wittgenstein & W. V. Quine stems from the same fallacy. It is suggested that philosophy is a domain independent of any sociological perspective, or social utility. African contributions to philosophy must center on general philosophical questions. 36 References. Adapted from the source document.

¶ A discussion of the future of critical theory, focusing on the legacy of Theodor W. Adorno's work & whether it is possible to ground critical theory on neo-Kantian foundations. The diminishing importance of the work of Max Horkheimer is discussed, as is the theory of artificial negativity formulated by the third generation of critical theorists. This theory postulated that as certain social spheres become more rationalized, the social whole will become more irrational, permitting the reintroduction of new relations of domination under the pretense of eliminating old ones. ¶ Erving Goffman's *Frame Analysis* (Harper, 1974) was heavily influenced by Gregory Bateson's *Steps to an Ecology of Mind* (Ballantine, 1972). Bateson's introduction of the theory of logical types to the study of social communication, considered as the focus of his double-bind theory, is directly concerned with the concept of a frame. Moreover, the dynamism of Goffman's argument is at least in part a product of Bateson's idea. In this light, a contrastive analysis of Goffman's & Martin Buber's work is offered from Bateson's unique viewpoint. In many ways, Buber's sociology is considered the antithesis of Goffman's; respectively, they represented the two principal ethoses of Western society, ie, love & skepticism. It is concluded that the angle that Goffman took should be reevaluated. 13 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

The focus on the ways occupational differentiation leads to different world images is lauded. Bensman & Lilienfeld use a phenomenological approach to understanding the occupational-specific consciousness of a variety of society's professional groups. ¶ The use of the idea of civil society within the social sciences is critiqued. Arguing against both its descriptive as well as prescriptive uses, the contradictions inherent to any contemporary use of the term are discussed. To better appreciate those problems, the idea of trust is posited as a less historically & ideologically "loaded" concept, & thus one that illuminates the contradictions of modern existence that are obscured rather than overcome by the idea of civil society. In this context, the problem of articulating trust in modern, highly differentiated societies is presented as the core dilemma facing social & political theory today. An analysis is presented of the concept of life in the unfinished manuscripts of Alfred Schütz's *Theorie der Lebensformen* ([Theory of Life Forms] Srubar, I. [Ed], Frankfurt: Suhrkamp, 1981). The influences of Henri Bergson's *Oeuvres* ([Works] Paris: Presses Universitaires de France, 1959) is noted. Schütz & Bergson share three viewpoints: (1) they both study the whole world; (2) they emphasize qualitative multiplicity; & (3) they investigate the quantitative multiplicity of time, space, language, & "Thou." Schütz's unique contribution is to appreciate the rich dynamics of meanings of our world based on the multiplicity of Thou. The influence on Edmund Husserl's "On Multiple Realities" ([no reference] 1945) & later works written in the US indicate the spread of Schütz's ideas to the US. ¶ A discussion of Emile Durkheim's theory of religion, & his concern with the question of meaning & moral order in modern society. Durkheim sees as the distinguishing feature of modernity the progressive emancipation of the individual from traditional sources of influence. The evolution toward greater individuation, culminating in the "cult of the individual" or "religion of humanity," is set by Durkheim within the context of the role of collective ideals in promoting social change & in the maintenance of moral order. ¶ It is contended that Jeffrey Alexander (no reference provided) was correct in his perception that modern sociology has a strong tendency to consider autonomous action rather than the effects of structure on behavior, & in emphasizing the great diversity of references in recent literature focusing on the actor. However, a clarification of the definition of actor, agent, & agency are needed. For over a century, a central trend in sociology has been growing recognition of the dissociation of the system from the actor. The future of sociology is closely tied to this debate: if sociologists accept a radical postmodernist view of the complete separation of the system from the actors, sociology would be deprived of its reason for existence. On the other hand, sociology will lose its credibility if it does not recognize the contradictions between the subjectivity of actors & the objectivity of systems. M. ¶ The effect of bourgeois a priori definitions of rationality & freedom on such theories of behavior as orthodox economic theory, liberalism, Marxism, & game theory is examined. Here, the very possibility of properly understanding rationality & freedom in terms of spatial metaphors is rejected, & a Hegelian critique of ahistorical approaches to the meaning of freedom & reason reveals a host of problems that axiomatic approaches inflict on contractarian theories of justice, game theory, & rational choice Marxism. An application of the game-theoretic approach to class conflict shows that, in the quest for determinate solutions, the historical character of payoffs & expectations is undermined. It is argued that to reclaim freedom & rationality for social theory, axiomatic definitions based on ontologically static binary oppositions must be eschewed. Moreover, conceptions of freedom & reason offered by rational choice Marxism & postmodern theories should be rejected in favor of a return to old-style dilectical materialism & a focus on Marx's theory of praxis. 1 Table, 1 Appendix, 38 References. ¶ A critical examination of the theory of modernity propounded by Anthony Giddens (eg, *The Consequences of Modernity* [see IRPS No. 53/90c01280]). Giddens's distinctive contribution is to break the falsely unitary notion of "modernity" into four partially self-propelled institutional logics, summed up under the notions of capitalism, industrialism, surveillance, & militarism. Each of these realms is found to be the carrier of specific structural contradictions, social movements, & risk profiles; their concurrent extension at the global level marks not the transition to postmodernity (as argued by various followers of Jean-François Lyo-

tard), but the culmination of modernity. Giddens's theory, however, is found to be composed of a web of conceptual distinctions that are disconnected from the real world & from research practice, & leave large areas of modern life unaccounted for. Further, these distinctions operate at a level of abstraction such that it is arduous to tell whether they might be of any use in actual sociohistorical analysis & make the theory look like a reincarnation of Grand Theory à la Talcott Parsons, ie, a form of theoretical scholasticism whose pertinence seems shaky as the various social sciences negotiate a "historic turn" to which Giddens has, paradoxically, significantly contributed. Additionally, his theory does not manage to clarify the origin of autopoietical procedures in the empirical domain. ¶ An analysis of the structure of sociological accounts of human actions. A model is given for sociological explanations in which philosophical elements (ie, general studies of explanations & decision theory) are combined with sociological elements (ie, the functioning of two social mechanisms: socialization & social control). The rational determinants of social acts are analyzed in terms of specific social causal mechanisms. Special attention is given to the theory of individual acts & to motivation mechanisms. However, no attempt is made to determine how these causal mechanisms can affect behavior patterns. ¶ Changes in Swedish industrial relations & political system are examined. For years the labor movement in Sweden, politically empowered by the Social Democratic party, exerted political hegemony. However, rifts in the labor movement, the internationalization of capital, & the defeat of the Social Democratic government have led to changing relations between labor & capital & the emergence of a new era of Swedish class struggle. This struggle is exemplified by the Swedish Employers' Confederation's recent decision to pursue a strategy of decentralization & their withdrawal from central wage negotiations & termination of corporatist arrangements. The power of employers in Sweden is now on the rise & the resources of unions, particularly representation of labor parties on boards & agencies, is declining. (SPA)

¶ In the eighteenth century in New Spain (Mexico), intellectual communication, including theories about art, was associated with institutions & religious life. The teachings of St. Thomas Aquinas about art were accepted, & beauty was held to be a God-given attribute of the object. The Catholic church was the most important client for artists & artisans. However, by the end of the century, society & systems of thought about art were changing. The changes are exemplified in the works of the Jesuit priest, Pedro José Márquez, writing on the theory of architecture & art (in Fernández, Justino, II [Ed], *Sobre lo bello en general y dos monumentos de arquitectura mexicana* [On Beauty in General and Two Mexican Architectural Monuments], Mexico City: UNAM, 1972). In positioning reason, not the attributes of the object per se, as the aesthetic premise in art, Márquez differentiated himself from the philosophy that had preceded him for two centuries in New Spain. In synthesizing concepts of modernity, the Enlightenment, & rationalization, Márquez opened up new interpretations of art & artistic practice, which were put to use with the coincident rise of Mexican nationalism. 23 References. ¶ In epidemiological & nutritional literature, the discovery of niacin & the conquest of pellagra, a nutritional deficiency that reached epidemic proportions in the South in the early 1900s, are often portrayed as straightforward medical victories. However, when the true etiology of the disease was first discovered by NY physician (MD) Joseph Goldberger, his results were angrily denounced by southern MDs, legislators, & the general public. Nearly 20 years elapsed before his conclusions were finally accepted & a coordinated public health effort was begun. The reasons for this irrational southern response are specifically related to the cultural identity & values of the region, demonstrating how culture can negotiate the acceptable parameters of scientific research. 20 References. ¶ The multiple discontinuities in Hungarian history, especially in this century, are at the root of current political indifference that hinders the progress of democracy. Based on I. Bibo's analysis of ruptures in Hun-

garian history since the Middle Ages (*Misère des petits Etats d'Europe de l'Est* (Misery of Small Eastern European Nations), Paris: L'Harmattan, 1986), the impact of historical discontinuities on twentieth-century Hungarian society is examined. Three social deficiencies are distinguished: (1) lack of self-criticism, (2) a social elite populated by mediocre individuals, & (3) conservativism & passivity. I. Shagrir

¶ In the context of the relationship between territory & social group, Belgium is considered a case study of the problematic rapport between social & political territory. Social territory is understood as territory of "identification," ie, society, & political as territory of "imposition," ie, state. The vertical structures in Belgian sociopolitics are analyzed, ie, the Christian, socialist, & liberal worlds. It is suggested that these lines of articulation modify the notion of linguistic group, transforming it into a social form. The resulting Belgian "federalism" as an organizational mode for the multicultural civil society is discussed. 14 References. Adapted from the source document.

The historiography since the fifteenth century of the origins of Greek civilization is outlined, laying out Bernal's main arguments & summarizing the critique of his ideas & methodology since the publication of *Black Athena* in 1987. Bernal's rehabilitation of the old model that emphasizes the Afro-Asian origins of Greek civilization is considered most vulnerable to criticisms by historians & archeologists, where findings provide the thesis with fragile evidence. Abrams, Lynn (History Dept U Lancaster, LA1 4YL England), **Martyrs or Matriarchs? Working-Class Women's Experience of Marriage in Germany before the First World War**, *Women's History Review*, 1992, 1, 3, Oct, 357-376.

¶ Pre-WWI German families have generally been portrayed as patriarchal & authoritarian, a model of marriage that legitimated male dominance within the home & was sustained through the society's ideology, economics, & laws. Such a model, however, does not guarantee that working-class (Wc) women existed only as martyrs at the mercy of their violent husbands. It is argued that domestic power relations were more complicated because marital disputes occurred within the context of poverty, contestation over resource allocation, & shifting gender roles within the marriage. Although restrictive divorce laws & a precarious female (F) labor market made it difficult for women to escape from marriage, the image of F dependency ignores the wives' ability to assume relative power within the household over the control of consumption as well as their access to F support networks. Clearly Wc women in pre-1914 Germany were not matriarchs, but neither were they simply martyrs to a patriarchal, authoritarian model of marriage. Adapted from the source document.

¶ Late-nineteenth-century English feminists confronted prostitution by closing brothels & banishing prostitutes from places of public entertainment. To understand their motivations, it is necessary to examine the views that these feminists held about a "purified" public & private world, which were largely informed by religious beliefs & adherence to temperance. The feminist philanthropists' concern for the morality of public space, moreover, can be traced to their desire for safety in those spaces; & their repressive, statist actions were in part formed by their changing attitute toward local government. ¶ A literature review is used to present a historical interpretation of sexual violence against women & children in which sexual violence is seen as integral to locating patriarchal power relations. Drawing from Stevi Jackson's concept of sexual scripts (see SA 27:3/79K0570), in which neutralizations of male sexuality are thought to mediate between culture, behavior, & consciousness, it is argued that legal institutions share many such neutralizations within their rules & procedures. A case study of police & lower court records from working-class communities of Lancaster, England, in the late nineteenth & early twentieth century illustrates: (1) how the prevailing culture of masculinity targets violence onto women & children, & (2) the extent to which women were able to use the police & courts to assert their own definitions of injury & to use informal support networks to redress grievances. ¶ Historical/archival evidence for female (F) claustration in medieval Europe is reviewed to specify the advantages a family might have enjoyed as a result of allocating some of its resources to a nunnery. A resource allocation perspective is used to argued that by founding or endowing nunneries, benefactors profited in two ways: by limiting the outflow of resources away from the family lineage; & by creating political & spiritual alliances that maintained &/or enhanced status in the local environment. It is shown that the benefits & costs of F religious claustration were influenced by changing ecological circumstances (ie, in social stratification, the availability of land, & in the rules of inheritance & marriage), & that the founding of convents in the early Middle Ages provided the founding lineage with a means of controlling land & thereby conserving its wealth. 119 References. ¶ Examined are the mortality experiences of children ages 6-24 months, 1850-1914, in the UK, utilizing census data. An attempt is made to explain why deaths from whooping cough, which is most fatal to infants, declined after 1870, while those from measles, which is most fatal in the second year of life, increased. It is argued that these patterns are explained by rickets, a specific deficiency disease that was recognized by nineteenth-century observers to influence the outcome of infections. Factors that influenced the prevalence & severity of rickets are examined, & the contribution of the disease to fatality in whooping cough & measles is assessed. It is concluded that a reduction in the incidence of rickets could have been crucial in producing a decrease in whooping cough fatality, which was accomplished through dietary improvement rather than through changing child care practices. 7 Tables, 2 Figures. ¶ Documentation of an anti-West stereotype can be found in the writings of nineteenth-century Polish traditionalists, who proclaimed that there was nothing to envy in urban & industrial civilization. The negative view of the West in Polish writings is argued to have had a positive effect on the Polish national character. While the means of picturing what was happening, & the methods proposed for saving the world, in these works may seem naive, the fears expressed are not. These writers were horrified by a world in which, they believed, a mathematical order had been substituted for divine law, & economic competition had replaced traditional authorities & communities. Katz, Marilyn (Wesleyan U, Middletown CT 06457), **Ideology and "The Status of Women" in Ancient Greece,** UM *History and Theory,* 1992, 31, 4, Dec, 70-97.

¶ The dominant research question in the field of the study of women in antiquity, ie, the status of women in ancient Athens, has been developed without an adequate historiographic basis. Here, an attempt is made to provide this missing historiography, identify the ideological parameters that informed the constitution of the original research question, & suggest that the new reformulation, centered around women in Greek society, must be modified to incorporate an analysis of female sexuality in ancient Greece. The constitution of the dominant research question reflects the continuing force of a paradigm influenced by patriarchy & misogyny. An examination of the ideological basis of this hegemonic discourse suggests that it derives from the nineteenth-century debate over women's place in civil society, where the example of the women of ancient Athens served a legitimating function within a wider political framework. Recent challenges to the traditional interpretive paradigm for the study of women in ancient Greece are considered. Adapted from the source document. ¶ The interplay between prostitution & the Catholic ethos in nineteenth-century Ireland is explored through an examination of the lifestyle of a group of socially outcast women, the "Wrens of the Curragh," many of whom were prostitutes. The traditional Irish discourse on prostitution has stemmed from the rescue work of nuns who judged the prostitutes on spiritual & moral grounds. But through the work of English journalist James Greenwood, whose ideas both reflected & rejected those of the nuns, it is possible to get a broader sense of the social dynamics operating as a group of women worked in their own interest & created a community apart from "respectable" society. ¶ Although early-twentieth-century sexology & psychology supported the representation of spinsters as unfulfilled & sexually repressed, it is suggested that they were unable to quell the writings of individual feminists actively engaged in rejecting & reworking the popular view of the spinster. Feminist doctors, in a collection of books about single women, employed psychosexual ideas to argue that spinsters could lead happy & productive lives through their work & female friendships. Maude Royden, a feminist preacher, blended this counterpsychology with religious discourse in her sermons & writings, while writer Winifred Holtby consciously rejected psychological & sexological definitions of women's fate in her fiction & political writings. Ideas from the works of Max Weber, Barrington Moore, & Eugen Weber are drawn on in elaborating conceptions of national political culture, nation-state, & nation. Smith, Bonnie (Rutgers U, New Brunswick NJ 08903), **Historiography, Objectivity, and the Case of the Abusive Widow,** UM *History and Theory,* 1992, 31, 4, Dec, 15-32.

¶ The saga of Jules Michelet, whose work was mutilated by his widow, Athénaïs, & rescued by heroic French intellectual researchers, is explored, noting the role of censure by these intellectuals in the development of French historiograpy. The subject of the authorship of Michelet is broached to show how Athénaïs edited passages in the travel journals to describe women instead of men, & to note that a major part of the much-condemned editing of Jules's love letters involved omitting those letters in which he discussed her sexual & physiological state & the doctor's opinions of it. It is suggested that the attacks on her authorship, in using gender to create a historical author, helps define the historical fields & reaffirms that the language of scholarship combines passages listing archival citations & professions of "respect of the letter" with

emotionally packed or sexually loaded phrases. Establishing the bounds of history & the authorial identity of generations of subsequent historians, the story of Jules & Athénaïs Michelet may have opened questions of French identity & the shape of its history. The saga of Jules Michelet has been useful in helping to construct the individual fantasy life of the scientific historian entranced by achievements of his predecessors. It is argued that Michelet scholarship has taken great pains to establish the priority of the male over the female in writing history. Adapted from the source document.

¶ The relationship between the history of women & contemporary feminist theory as evidenced in GB over the past twenty-five years, the teaching of history at all educational levels, & recent theoretical developments within feminism that are framed by postmodernist thought are investigated. Perspectives about the common processes of imaging (figuring) the past are offered, suggesting that, because of shared cultural assumptions & educational experience, women's history in GB has constituted a politics rather than a theoretical construct. The use of historical information by literary critics & theorists is contended to form a series of historical stereotypes of women that, in turn, shape historical investigation. Drawing on the recent work on Margaret McMillan (Steedman, C., *Childhood, Culture and Class in Britain: Margaret McMillan, 1860-1931*, London & New Brunswick, NJ, 1990) & late nineteenth-century British socialism, the narrative conventions governing the writing of autobiography, biography, & history, the differences among them, & the cognitive effects of employing them as writer or reader are discussed. It is suggested that Clio, an example of women's history, cares no more about the women's story told under the impulses of feminism than she does about anything else; no matter what feminist theory accompanies the historian, the tale she tells will always be about something else of which women are only a part. ¶ During WWII, women's morality was sharply criticized by innuendo & official enquiry. Some male historians have read these accounts as evidence of women's sexual liberation during wartime, but feminist historians have reacted more critically, emphasizing continuity, the double standard, & the control of women through sexuality harassment. Interview data, used to reveal what women (N = 40) themselves were feeling, challenges some of these constructions of sexuality in wartime, including the official discourse of women as immoral & the views that simplistically claim wartime as sexually liberating & that overemphasize the control & regulation of sexuality during war. ¶ Explained is why GB, with one of the most highly developed public health establishments in the early twentieth century, mounted one of the least effective responses to the influenza epidemic of 1918/19. The analysis is situated within the context of WWI, the evolution of the medical profession, & official public policy. It is shown that status-conscious medical professionals & health care administrators deprecated the virulence of the epidemic & counseled the public to ignore it. Pragmatic attention to the epidemic occurred at the local level of administration only. The deficiencies of this policy are attributed to the passive, & even obstructionist, role of the well-established scientific medical profession & public health establishment, which thrives in GB today. 2 Tables. It is maintained that neither purely abstract value judgements of an ethical system proceeding from assumed truth nor pragmatic judgment directed toward democratic agreement can be correct in a political sense. The true propositions are realized by the values of existing institutions, including reform, as demonstrated by Sir Thomas Moore. The politician should be the binding factor between the ideal & concrete conditions of a people's life. The values & virtues that should guide politicians' decisions are outlined. ¶ An evaluative study of the impact of the instructional leadership focus of the innovative administrator training program at the Calif School Leadership Academy (CSLA) on graduates' practice. CSLA graduates (N = 44) who served as site principles for at least 18 months were the Ss of extensive case studies compiled through interviews, observations, & document analysis. The relationship between instructional leadership functions & skills is discussed, & it is concluded that: (1) graduates practice many aspects of instructional leadership; (2) training has a significant positive impact on leadership practice; & (3) an integrated view of instructional leadership & achievement of highly effective management is a gradual process. 6 Tables, 20 References. ¶ People's self-presentations influence not only how they are regarded & treated by others, but also how they view themselves. To examine the effects of social identity on self-presentations, 66 male & 60 female psychology students rated themselves positively or negatively during a face-to-face interview, a written interview, or on an anonymous questionnaire. Results show that Ss high in social identity (the tendency to root identity in social sources of experience) defined themselves in terms of how they appeared to others & were affected most in face-to-face presentations. Ss low in social identity were primarily affected by their private, positive thoughts about themselves. 4 Tables, 43 References. Adapted from the source document. ¶ A theoretical framework is presented for studying the effects of group development (GD) & group history (GH) in group support systems (GSS) (ie, computer technologies used to aid groups in identifying & addressing problems), & several propositions regarding expectations for research in this area are offered. A literature review discusses recent work on GD & GH in light of GSS, focusing on progressive, cyclical, & nonsequential models of GD. It is found that only two GSS studies have been conducted on the effects of GD & GH on group process, performance, & efficiency. It is concluded that GH & GD are likely to influence group performance in high-conflict conditions within interacting groups. 9 Figures, 83 References. Adapted from the source document. ¶ The social processes, relationships, & consequences involved in the social construction of rumor are investigated, using interview data from 94 residents of a small Ohio community, analyzed via an interactionist approach, & focusing on the social relationships between rumor participants & how the rumor interactions were constructed to identify divergent meanings, uses, & consequences of a rumor that a poisonous snake in the produce section of a supermarket fatally bit an elderly shopper. Findings reveal that the "snake in the greens" rumor brought many people together through frequent repetition, connecting them into a larger interrelated network of communication. The rumor remained generally consistent in content, varying little from situation to situation. The situations & interactions, however, varied widely: some interaction contexts were playful, & others involved criticism; & in some situations, a metaphorical dimension was mentioned. By focusing on the social processes & forms of rumor spread, social scientists can gain a greater understanding of community solidarity. Adapted from the source document. ¶ Data collected in focus group interviews with 49 recent widows & 76 caregivers to spouses with Alzheimer's disease are analyzed to determine the impact of these life events on social networks. Widows mentioned more personal contacts & reported feeling more intensively about them, either positively or negatively. Caregivers mentioned fewer people & in a more neutral fashion. It is concluded that widowhood produces a more active engagement with others, while caregiving produces withdrawal & isolation. It is observed that the intersection between coping tasks & social networks is a promising field of future study. 3 Figures, 25 References. Adapted from the source document. ¶ Cues of intimacy in conversation were explored via analysis of 36 audiotaped conversations–18 between friends, & 18 between acquaintances Ss (N = 161) were asked to distinguish conversations between friends vs acquaintances, & identify the cues (of 38 categories) for their decision The most common reasons for distinguishing friends' conversations were mutual knowledge & self-disclosure. Ss were in wide agreement on the relation between cue categories & relationship type. Findings reveal cues for intimacy thus far neglected in theory & research, eg, knowledge & relaxation. Conversations were also found to illustrate abstract properties of relationships, eg, continuity & mutuality. 3 Tables, 41 References Adapted from the source document. ¶ Presented is a method for the study of structuration in larger samples of groups or organizations than have previously been investigated A category system for the identification of structuring moves is described, along with several methods for characterizing short- & long-term trends in structuration processes. The method is used to explore how groups incorporate a computerized group decision support system (GDSS)-part of a class of new computer & communication technologies designed to help groups improve meetings & make better decisions–into their decision processes. Transcribed meeting data from 18 groups evenly divided into 3 experimental conditions are used to evaluate the effects of restrictiveness of GDSS technology on structuration processes &, in turn, on the relation of structuration to a key group outcome–consensus change Results suggest that 2 major types of structuring processes occur in computer-supported groups & that the nature of structuration is related to degree of consensus change. 6 Tables, 3 Figures, 42 References. ¶ The Profiles of Organizational Influence Strategies questionnaire is used to explore the structure of leader influence among managers (total N = 2,812) in Australian, English, Japanese, & Taiwanese organizations, & results are compared to those of a previous study of 357 US managers (Kipnis, D., & Schmidt, Stuart M., *Profiles of Organizational Influence Strategies*, San Diego, Calif: University Associates, 1982). Results demonstrate the utility of examining the factor structure of survey instruments rather than relying only on scale reliability scores in cross-cultural research. The leader influence strategies of reason, bargaining, higher authority, sanctions, friendliness, assertiveness, & coalition were found in each country, & collectively accounted for at least 50% of the variance in leader influence on subordinates. However, the specific tactics defining these leader influence strategies were not uniform across cultures 4 Tables, 1 Appendix, 28 References. Adapted from the source document. ¶ The hypothesis that attribute typicality moderates intragroup differentiation is tested in an experiment with 36 nonpsychology students from the U of Munster (Germany), who were divided into 2 ad-hoc groups, allegedly on the basis of their artistic preferences, but in fact on a random basis Subsequently, students rated the homogeneity of the ingroup & the outgroup. The predicted reversal from perceived relative ingroup homogeneity (less intra-ingroup differentiation) on typical ingroup attributes to perceived relative outgroup homogeneity (less intra-outgroup differentiation) on typical outgroup attributes was confirmed for both homogeneity measures (standard deviation & probability of differentiation); however, ingroup homogeneity effects were more reliable than outgroup homogeneity effects. The experimental design also included relative ingroup size (minority vs majority) as an additional independent variable. This variable, however, did not qualify the moderating influence of attribute typicality Instead, there was some indication that minority members were more likely than majority members to show an overall ingroup homogeneity effect (ie, across all attributes). The results are interpreted in terms of social identity processes. 1 Table, 14 References. Modified AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ The implications of focus groups (FGs) as an inquiry/intervention technique are discussed, focusing on the impact that FGs have on participants, based on analysis of the Rural Media Project–part of the Kellogg Rural Revitalization Initiative at the U of Georgia–which organized FGs on the role of rural journalists in community development. Data collected from the FGs were used in conjunction with a statewide survey of professional attitudes, a content analysis of development news coverage, fieldwork, & interviews. FG participants–including journalists, community leaders, & concerned citizens–were surveyed 4-6 months later regarding the impact of FG experiences. Results show that: 67% of respondents reported that the topics raised during sessions were ones that they continued to think about, 57% reported discussing FG issues with others, & 86% anticipated continued involvement in the Rural Media Project. Findings suggest that the abundant social interaction found in FGs makes them ideal for social inquiry & intervention. 3 Appendixes, 12 References Adapted from the source document. ¶ Questionaire & experiment data obtained from 83 students at a midwestern US university were used to examine S. (Eds), *Handbook of Social Psychology*, Vol. 2, New York: Random House, 1985, 347-412), & to identify the communicative behavior of the group's majority as they react to the arguments of an opinion deviate who argues against the prevailing majority view. Majority responses are examined in light of the deviate's gender, as well as changes in her or his substantive & linguistic communicative behavior. Results reveal that the opinion deviates exerted little influence, regardless of their gender or communicative behavior. In general, the majority's deviate-directed verbalizations were characterized by cooperativeness, emotionality, & opinionatedness. Unlike the influence ratings, however, these content characteristics varied significantly, depending on the deviate's gender & his or her use of evidence & qualifying expressions. 7 Tables, 71 References. ¶ A review essay on books by: Erwin C. Hargrove, *Jimmy Carter as President: Leadership and the Politics of the Public Good*, & Charles O. Jones, *The Trusteeship Presidency: Jimmy Carter and the United States Congress* (for both, Baton Rouge: Louisiana State U Press, 1988 (see listings in IRPS No. 68)). Hargrove focuses on Carter's leadership in policy formation & decision making. Carter's political style is characterized by hard work, preference for comprehensive solutions, & distaste for traditional politics & interest groups. His disdain for politics as usual helped achieve his election but his lack of regard for political considerations, his political distance from the Democratic party & its traditional support groups, & his efforts to reconcile political differences rather than manage them led to major legislative setbacks & helped create the perception of being inept & ineffectual. Jones examines Carter's legislative performance from the perspective of his relations with Congress. Carter viewed Congress as a body of self-serving politicians & himself as a public trustee elected by the citizens of the US to confront entrenched congressional special interests. His antipolitical approach to legislation conflicted with the norms of the Washington, DC, community; though it achieved some success, Carter's program was ultimately stymied by lack of congressional cooperation. ¶ A report on an experiment that attempted to demonstrate that group members anticipate bias from outgroups & that they view this bias as an unfair form of discrimination. A pair of conditions were included in which interacting groups of 4 Ss worked together to create a product that they believed would be evaluated by either an outgroup that was alleged to have been involved in the same task activity or by an impartial panel of judges. Results indicated, as predicted, that while Ss expected outgroup members to favor the outgroup product, they expected impartial judges to agree with their own more favorable ratings of the ingroup product. Findings imply that while Ss saw anticipated outgroup judgments as biased, they saw their own evaluations as relatively impartial. These results are discussed as an expression of an ethnocentric pattern of attribution. 1 Table, 26 References. AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ Although explanations about the nature of superior-subordinate relationships (SSRs) in leadership literature differ, each view is based implicitly on particular levels of analysis. An attempt is made here to conceptualize & test alternative perspectives of SSRs by incorporating multiple levels of analysis in hypothesis generation & testing. Data from matched questionnaire reports of a sample of retail sales associates & their supervisors (total N = 83 dyads) in the southeastern US indicate

that on the dimensions of attention, job latitude, satisfaction with performance, & job congruence, SSRs differ from one interpersonal relationship to another. In a sample of 116 insurance agent-manager dyads, however, there were individual differences on these dimensions for superiors vs subordinates. Implications of these different views of SSRs for future leadership research are discussed. 6 Tables, 43 References. Adapted from the source document.

¶ Cree notions of cognitive competence were studied among 60 Cree in northern Ontario, using a card-sort technique containing 20 words for competence. Multidimensional scaling produced 2 dimensions: positives (eg, "thinks hard," "respectful") to negatives (eg, "stupid," "crazy," & "backwards knowledge") & insensitive (eg, "mentally tough") to sensitive (eg, "religious," "understands new things"). "Lives like a white man" was rendered both as negative & as insensitive. Two terms, "wise" & "understands new things," were rated similarly on 12 bipolar 5-point scales, even though they had been conceptually distinct on the card-sort. In general, Cree values about good thinking are in direct opposition to white Western notions. The socialization of Cree children in terms of social, moral, & practical dimensions in Cree notions of competence is discussed. 1 Table, 1 Figure, 18 References. Adapted from the source document.

¶ Data obtained in 2 experiments with samples of undergraduates (total N = 305) at 2 southern Calif universities are drawn on to investigate: (1) the influence of the "subjugation-control over nature" value orientation, a dimension of cultural variation, on attribution processes; & (2) the effect of activation of beliefs associated with this value orientation on attribution processes & helping behavior. Results of experiment 1 suggest an effect of value orientation on attributions for a behavioral outcome, while those of experiment 2 demonstrate that beliefs interact with empathy to influence helping behavior. Overall, the findings suggest the importance & feasibility of investigating cultural factors in models of social behavior even when research is conducted within a single culture. 2 Tables, 4 Figures, 12 References. ¶ Rating scale data from a sample of 365 undergraduates from the midwestern US are used to examine the impressions created when individuals direct activity toward the self (eg, the widow pampered herself). Ratings of evaluation, potency, & activity for 256 combinations of identity & self-directed behavior were regressed on measurements of the component identities & behaviors. Results indicate that actors & behaviors involved in self-directed activity (SDA) generally seem less good, less powerful, & less active than before the event; a decline in potency is the largest effect. Specific outcomes, however, are influenced by the character of the actor, the behavior, & interactions between the two. Findings suggest that female actors are processed somewhat differently from male actors, & that impressions of one's own SDA may differ from impressions of others' SDA. 4 Tables, 1 Appendix, 39 References. ¶ Ethical, evaluative, & theoretical issues surrounding prejudice-reduction simulations, with specific reference to the Blue Eyes-Brown Eyes activity, are explored, using data for university education students who participated in the simulation activity. The results of the evaluation procedure show that: all participants found the simulation meaningful, the statistical evidence supporting the effectiveness of the activity to reduce prejudice was moderate, & virtually all participants reported stress from the activity. It is concluded that, given specific precautions, it is ethically defensible to conduct prejudice-reduction simulations if it is reasonably believed they will bring about positive attitude change. A research agenda is proposed that more closely links simulation design with theoretical findings in the field of intergroup relations. In **Prejudice-Reduction Simulations: Social Cognition, Intergroup Theory, and Ethics**, Angie Williams (U of California, Santa Barbara) & Howard Giles argue that Byrnes's & Kiger's assumption that individuals who experience prejudice firsthand become less prejudiced themselves is questionable, is not convincing intuitively, & has not been demonstrated empirically. Furthermore, their claim that short-term emotional discomfort is ethically defensible if it will achieve greater compassion in the long term is not rooted in current social-psychological theory; also, risks to participants may be too great to justify the simulation's widespread adoption. In **Prejudice-Reduction Simulations: Notes on Their Use and Abuse–A Reply to William and Giles**, Byrnes & Kiger respond that Williams & Giles have overstated their case, attributed to Byrnes & Kiger ideas not expressed in their work, & failed to suggest an alternative to their measurements. 58 References. Ralph Turner (see SA 24:3/76H9511) argues that people recognize heir true selves either in acting out institutional roles or in experiencing nner impulses. He neglects to consider a conception of real self rooted n adherence to changing, situational social pressures. Here, this selfconception is described, based on interviews with 49 north Indian males (Ms) conducted 1986/87. Explored is how conscience & cognitive dissonance work for people with a socially anchored real self. Sociologists often link self-conceptions to economic changes & urbanization. Using Durkheimian & psychoanalytic analyses, it is suggested that selfconceptions are shaped by family structure. The surprising similarity between the family experiences & self-conceptions of US females & Indian Ms supports the contention that family structure is important in shaping self-conceptions, & suggests that the institutional-impulsive dichotomy is biased toward M & Western experience. 37 References. ¶ A family values questionnaire was used to compare the modes of acculturation & the response tendencies of adolescents (total N = 266) from biethnic & homoethnic families in Athens, Ga, & 80 homoethnic adolescents of Greek immigrants in Germany & the Netherlands. Results demonstrate that biethnic adolescents manifest different forms of values acculturation compared to all 3 groups of homoethnic Greeks. The biethnic adolescents appear to be integrating primarily to the disparate value systems of their biethnic parents, (manifested by reluctance to disagree with the values of either homo- or heteroethnic parent), & less to the ecological & social factors of the host culture. The response tendencies appear to be closer to accommodation, but with a different response pattern dependent on whether they are toward the traditional or rejection of traditional values poles of the scale. 1 Figure, 27 References. ¶ Subjective motivations in drug dependence were assessed through open-ended interviews conducted 1989/90 with 60 clients at a southeastern US methadone clinic concerning their drug usage history. Most of the respondents–80%–reported that initial illegal drug use was due to social influences–eg, the youth & drug counterculture of the late 1960s & 1970s & coping with military service in the Vietnam war. Most of the 20% naming physiological reasons cited the connection between illegal drug use & medication for wounds suffered in the Vietnam war. When the clients' drug use expanded to include heroin, their motivations for usage changed dramatically. Repeated heroin usage had positive social effects, but at the point of addiction, the major motivation for use was physiological–preventing the physical pain of withdrawal–& social factors lost salience. 28 References. ¶ Motionlike events & rhythmic events comprise two broad categories of dynamic events. Here, focus is on rhythmic events, the temporal relationships that characterize them, & the way people respond to them. The idea of reciprocity as it applies to complementary temporal relationships in events (the perceived) & to a rhythmically sensitive attender (the perceiver) is discussed. It is argued that environmental events in which temporal relationships form simply nested binary time hierarchies (or ones based on small-integer time rations) manifest rhythmic properties that allow attenders/perceivers ready attentional entrainment. Findings from an illustrative experiment that considers how people selectively attend to different kinds of visual event sequences support this argument. 5 Figures, 46 References. ¶ Estimated is a three-wave model in which the connections among self-rejection & specific forms of deviant behavior are mediated by coping styles with which the deviant patterns are functionally compatible. Data are drawn from questionnaires administered to an initial sample of 3,148 seventh-grade students in the Houston (Tex) Independent School District in 1971 (Time 1), 1972 (Time 2), & 1973 (Time 3). Results show that: avoidant coping at Time 2 is correlated with drug use at Time 3; attack coping style at Time 2 is related to theft & violence at Time 3; & self-rejection has independent positive effects on all modes of deviance. The findings suggest that deviant behaviors are self-protective responses. 1 Table, 1 Figure, 37 References. Adapted from the source document. ¶ Expectancy theory has been conceptualized in terms of two mutually exclusive models–single alternative forces & choice–& reviewers have concluded that the choice model is theoretically correct, while the force model is an incorrect & unacceptable operationalization of V. H. Vroom's theory (*Work and Motivation*, New York: Wiley, 1964). Here, it is argued that the theories are not contradictory, but complementary. It is demonstrated how an integrated force-choice model improves existing motivation theories because it not only explains goal choice, but why two individuals with the same goal, ability, & environmental constraints may exert different amounts of effort. 1 Figure, 37 References. ¶ Questionnaire data are drawn on to explore cross-cultural differences in values & nuclear war attitudes between 336 Caucasian & 67 American-Indian adolescents from 4 high schools in a rural area of eastern Wash & northern Idaho. Analysis reveals that American Indians placed a higher priority on the values of family security, social recognition, helpfulness, & obedience than did their Caucasian peers. They also demonstrated less pessimism about the effectiveness of civil defense measures, less hesitancy to escalate in a nuclear confrontation, & less pessimism about the effectiveness of actions to bring about a nuclear freeze. 3 Tables, 27 References. ¶ A review essay on a book by Charles Taylor, *Sources of the Self: The Making of the Modern Identity* (Cambridge, Mass: Harvard U Press, 1989 [see listing in IRPS No. 68]). Taylor aims to describe the self that "we" in the West all have. Though he fails to produce a convincing analysis of the Western self, his book represents a useful project: the reasons behind its failure make for an interesting philosophical discussion by themselves. One of the most important reasons has to do with an inadequate account of everyday practices. A discussion of Taylor's arguments, confined largely to those about the relationship between philosophical ideas & the practice of everyday life, demonstrates why it is that any analysis of the self needs to come to terms with such practice, & how best to conceive of it. ¶ The impact of communal vs nuclear family childrearing on male (M) gender identity, gender relations, & self-esteem was examined through questionnaire data collected from 53 Ms ages 16-18 born & raised in a kibbutz & 81 high-school-age Ms born & raised in middle-class nuclear families living in urban Tel Aviv, Israel. No significant differences in masculinity-femininity scores or the importance of mother, father, or siblings were found. More kibbutz Ms fell into the androgynous gender category & had more tolerance for cross-sex behavior. Androgynous Ms reported a significantly higher proportion of childhood female friends than any other gender identity subtype, suggesting that peer influence is more important than parental influence in creating androgynous identities. Sexual egalitarian attitudes were significantly related to self-esteem in the kibbutz but not in the city. 6 Tables, 34 References. D. ¶ The association between literary creativity & alcohol use is argued to be a cultural myth. Case studies of 3 prominent twentieth-century Norwegian authors–Knut Hamsun, Aksel Sandemose, & Inger Hagerup–demonstrate that their high consumption of alcohol, at least periodically, contributed to this myth. Secondary source data indicate that alcohol consumption has been higher than the norm among other creative writers as well, & characteristics of the author's work setting & personality that may explain this are discussed, including: solitude, the strain of shifting in & out of a fictional world; anxiety & depression; & participation in cafe society. 23 References. Misuse of the DSM-III, UM *Deviant Behavior*, 1993, 14, 1, Jan-Mar, 1-21.

¶ Certain types of religious participation are classified as deviant behaviors by the *Diagnostic and Statistical Manual of Mental Disorders* (*DSM-III* & the *DSM-III-R*). The glossary of technical terms includes negative as well as delimiting religious examples where nonreligious content could have been used. In general, the negative religious bias implies that religion, especially exotic religion, is connected with psychosis. Biases in categorization of cult members or former cult members as victims of paranoid personality disorders, dissociative disorders, or posttraumatic stress disorder also appear. Until the reliability & validity of the *DSM-III* & *DSM-III-R* are improved, clinicians should be alert to these negative religious biases & consider alternative nonpsychotic diagnoses for religious behaviors. 1 Table, 80 References. Roy, **Ramashray, The Concept of Development: Its Implications for Self and Society,** *Psychology and Developing Societies*, 1991, 3, 2, July-Dec, 133-155.

¶ It is argued that insistence on one well-structured concept of person as a reference for adjudicating normative claims about human rights & obligations yields only a partial image of the individual. As such, development emphasizes the search for felicity in the Hobbesian sense as the source of happiness, personal development, & civilizational progress. In this perspective, the self emerges as a broken totality with deleterious consequences both for self & society. Attempts to rectify this have generally failed because they have tended to reinforce rather than overcome broken totality. As a result, self-assertion as an integral part of the modern concept of development turns out to be destructive both for the self & society. 33 References. Adapted from the source document.

Sant Cassia, **Paul** (U Cambridge, CB2 1TN England), **Authors in Search of a Character: Personhood, Agency and Identity in the Mediterranean,** *Journal of Mediterranean Studies*, 1991, 1, 1, 1-17.

¶ Luigi Pirandello's play 'Six Characters in Search of an Author' (F. Firth's translation from Italian, in *Pirandello's Collected Plays, Vol. 2*, London: John Calder, 1988 [1921]) is used as a metaphor to examine the anthropology of the Mediterranean. Focus is on two interrelated processes: how anthropologists as authors have tended to construct their texts & search for "characters" to describe the region, & how the people of the Mediterranean construct their identities as authors of their own characters. The political economy of the shifting category of the Mediterranean is examined in light of recent criticisms of a Mediterranean anthropology. A theme often highlighted as typcial of the Mediterranean region honor--is examined via reference to the construction of personhood & identity & the tensions that it creates. It is concluded that the anthropology of the Mediterranean could benefit by constructing its problematics in reference to the central issues raised by Marcel Mauss & Georg Simmel about the nature of social exchange & its relationship to concepts of the person. 26 References. Advocating a cultural politics to reempower the Left, Giroux offers a critical pedagogy that recognizes feminism & identity politics as correctives to modernism's male/Anglo history & to postmodern theory's erasure of all narratives. It is argued that the Left has been fragmented by various inflections of feminism, Marxism, postcolonialism, & liberalism, which can be ameliorated by a cultural politics infused with ideas from cultural studies. 39 References. Regression analyses of questionnaires from 261 randomly selected households in a medium-sized town in central England indicate a substantial independent effect for self-identity, even when past consumption is factored in. ¶ Based on J. Rotter's social learning theory (*Social Learning and Clinical Psychology*, Englewood Cliffs, NJ: Prentice-Hall, 1954), data obtained via 4 standardized scales are used to compare 149 university students from Poland & 136 from the southern US on 4 belief-based personality constructs: paranormal beliefs, locus of control, irrational beliefs, & social interest; personality correlates of paranormal beliefs are also investigated. Results indicate that samples report high levels of traditional religious beliefs, as well as disbelief in superstition, spiritualism, & witchcraft. The Poles report a significantly greater external locus of control & endorsement of irrational beliefs, & their paranormal beliefs were significantly related to 10 personality correlates, whereas for the Americans, only 1 relationship was significant. Findings support the notion that within the Polish sociocultural situation, fundamental political & ideological conflicts between the government & the Roman Catholic church may have optimized personal involvement in choosing beliefs & values, resulting in more central, personally involving, & self-relevant beliefs, in turn, resulting in more significant personality correlates of paranormal beliefs. 1 Table, 39 References. ¶ W. Damon's & D. Survey data obtained from 199 Dutch, Turkish, & 50 Moroccan children living in the Netherlands confirm t hypotheses that: the Dutch children would make more use of psycholog cal characteristics than the Turkish & Moroccan, & the Turkish & M roccan children would refer more to social characteristics than t Dutch. It is suggested that the significant differences found can be a counted for by the rather strict adherence of the Turkish & Morocc to their own cultural norms, as well as in terms of their relative segreg tion from the Dutch community. Furthermore, most of the Turkish Moroccans living in the Netherlands come from the countryside & a more traditionalist than the people from the cities. In addition, the in portance of ingroup awareness & loyalities may have become eve stronger in the Netherlands, where there is an outgroup that is superi in both number & status. Tease recipients attempt to interpret this goal based on multiple clues to meaning. This interpretation influences the type of response the recipient is likely to make, serious, humorous, or mixed. ¶ An ethnomethodological study attempting to respecify the natural sciences as discovering sciences of practical action. As a case study, Johann Goethe's morphological theorem (eg, *Scientific Studies*, New York: Shurkamp Publisher, 1988) is respecified as a series of practical actions using textual materials. Goethe's morphology is presented in a way that enables readers to use their own competencies to apprehend the "lived work" of natural sciences. One ethnomethodological assumption is that Goethe's morphology can be found in the lived structure of its reproducible detail This enables the reader to analyze Goethe's morphology by recovering, describing, teaching, & reproducing his practices, not as an abstract idea, but as an example developed through competent reading. ¶ In an analysis of aloneness, Georg Simmel's work is drawn on to uncover generic patterns of relation between the individual & the community. Three forms of aloneness are distinguished by focusing on the interactional & relational levels of sociation underlying each. Other-imposed aloneness (represented by isolation) is an asymmetric form, representing the state of being cut off from immediate interaction or extended relations. Mutually constructed aloneness is represented by privacy & solitude, both of which are symmetric, intentional, & cooperative. Privacy, however, is the temporary suspension of interaction & implies at most a common past & shared future, while solitude rests on a foundation of committed, temporally extended relationships. Self-imposed aloneness (represented by escapism) is asymmetrical, involves a negative affirmation of the community, & is rooted in a distorted temporal existence. Illustrative examples are offered of each type. 65 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

Drinkwater, Michael (Adaptive Research Planning Team, Kabwe Zambia), **Visible Actors and Visible Researchers: Critical Hermeneutics in an Actor-Oriented Perspective**, *Sociologia Ruralis*, 1992, 32, 4, 367-388.

¶ The actor-oriented approach developed by Norman Long (eg, see *Encounters at the Interface. A Perspective on Social Discontinuities in Rural Development*, Wageningen: Agricultural U, 1989) attempts to address the problems of how social action can be interpreted & of how an actor perspective can be combined with a structuralist perspective. The strengths & weaknesses of such a perspective are examined here, focusing on the way that the concepts of agency & interface are used. It is argued that the concept of agency needs to be applied not only to those who are the Ss of the research, but also reflexively to the researcher. Moreover, the concept of interface misleads by focusing on the "what" of research rather than the "how." The key distinction between agency & structure should be one of the perspective rather than of structural levels. A critical hermeneutics is employed to show how an actor-oriented perspective can be strengthened as a theory to inform social science method & practice in developing countries. 30 References. ¶ Erving Goffman's *Asylums: Essays on the Social Situation of Mental Patients and Other Inmates* (New York: Doubleday Anchor, 1961) & other works dealing with psychiatric patients have rarely been systematically investigated to discern his theoretical viewpoint. His analysis of everyday life situations presents a different viewpoint from that of the antipsychiatrism usually ascribed to him. His analyses of the total institution & everyday life situations are contrasted to determine why he was against psychiatry & to pinpoint characteristics of his ideas by comparison with labeling theory. Proceeding from the idea of the sacredness of self in modern society, Goffman focused attention on face-to-face interaction. He observed the behavior of psychiatric patients, concluding that they violate the order of face-to-face interaction, impinging on the sacredness of other conversational participants by acting inappropriately. The opposite case is that of the total institution impinging on the ego of the psychiatric patient & destroying his identity. 2 Figures, 25 References. Adapted from the source document. Grenier, Marc (McGill U, Montreal Quebec H3A 2T5), **Review Essay**, *Canadian Journal of Sociology/Cahiers canadiens de sociologie*, 1992, 17, 4, fall, 429-440.

¶ A review essay on a book by S. M. Lyman & A. J. Vidich, *Social Order and the Public Philosophy: An Analysis and Interpretation of the Work of Herbert Blumer* (Fayetteville & London: U of Arkansas Press, 1988 [see listing in IRPS No. 68]). This book examines causes & effects of mo-

ral disorder in the US through review of an eclectic selection of twelve of the works of Herbert Blumer. The US public is characterized as consumed by self-interest, overly influenced by the vagaries of mass media, & having little consistency in its moral principles. This moral bankruptcy, in turn, undermines the power of public opinion & the effectiveness of public decision making. Ineffective political leadership is blamed for this debacle of public philosophy. Unfortunately, the book suffers from the lack of a consistent methodology, which undermines the reliability & validity of the authors' claims, & is particularly plagued by imprecise operationalization of the concept of public philosophy. Harré, Rom (Sub-Faculty Philosophy U Oxford, OX 4JJ England), **The Discursive Creation of Human Philosophy,** *Symbolic Interaction*, 1992, 15, 4, winter, 515-527.

¶ The claim that psychological phenomena come into being in human interactions can be read either developmentally or ontologically. The new turn to discursive psychology proposes the latter. This view is not a form of reductive relativism, since it depends on the maintenance of transcendental conditions for the possibility of language & other symbolic interactions; these conditions (including the existence of a general moral order) must be universal. The basic analytical concept of discursive psychology is conversation, treated as an open set of possible speech act patterns. Since acts are normatively constrained, individuals must be ascribed intentions in their use & skills to use them. These skills are grounded in, but necessarily not defined by, neural structures. The discursive thesis is that language use is not a way of manifesting or referring to psychological entities of processes that exist independently of that use. Psychological phenomena, such as selves, only exist in the techniques of language use (eg, personal reference), attitudes exist only in the use of accounting techniques, emotions only in emotion displays, which are interpreted as embodied judgments–moral (anger), aesthetic (disgust) or prudential (fear). This point is illustrated via an analysis of displays of pride, & the correct usage of that word. A more radical example is the analysis of gender, not as a social construction, but as the product of gender displays, interpreted as intentional, normative discursive acts. 15 References. AA

¶ A review of research on the "communication game" that supports two sets of conclusions: (1) communication as social action: (A) communicators tailor their summary of target information to suit their audience's knowledge of or attitudes toward the target, ie, they achieve "shared reality" with their audience & thereby perform a social action; (B) communicators' different motivations to achieve "shared reality" with their audience influences the extent to which they tailor their message to suit the audience, as evident in "super-tuning," "anti-tuning," & "nontuning"; & (C) when there is a delay between successive messages about a target, communicators use their first message to construct their second message even though the two audiences have different characteristics; & (2) how communication as social action creates meaning: (A) communicators use their message summaries about a target as a direct source of information about the target even when the message distorted the original target information to suit the audience, & these message summaries in turn influence the communicators' own memory & impressions of the target; (B) as the delay since communicating about the target increases, communicators' use of their message as a source of target information persists or even increases; & (C) communicators' messages about a target to suit their audience can have either beneficial or detrimental effects on the accuracy of their memory & impressions of the target. 4 Tables, 2 Figures, 73 References. ¶ Differentiating between sources of support (spouse, friend) & types life problems (role or ambient strains), it is possible to more closely e amine the links among variables central to theories of social support. U ing interview data from 267 married, full-time working parents living i the Indianapolis, Ind, area, a continuum of support efficacy is hypoth sized wherein spouses & friends ameliorate the depressing effects of no familial strains (ie, work strains). It is further hypothesized that spouse buffer the relationship between ambient strains & depression, whil friends buffer the relationship between family role strains & depressio Findings indicate that perceived spousal support alters the initial perce tion of strain & off-sets the depressive effects of all forms of life strain while perceived friend support has more limited & less direct effect Thus, findings suggest that researchers must be attuned to distinction among intimates when examining the negative effects of role strains, bu not necessarily of ambient strains. 3 Tables, 3 Figures, 63 Reference Adapted from the source document.

¶ Ethnographic interview data from 35 light undercover narcotics agent in a moderate-sized midwestern municipality are drawn on to explor ways that the corruptive influences of undercover drug operations o agents can be neutralized. A typology of routine & nonroutine drug-us evasion tactics is developed. Routine tactics involve excuses based on greed, business constraints, & role obligations (occupational, legal, & interpersonal), while nonroutine tactics involve reverse accusation & simulation. Dramaturgical interpretation of excuses is provided that accentuates their deceptive & fraudulent nature, unlike traditional interpretations that highlight their role as a reparative technique & aligning action 56 References. ¶ Questionnaires & a measure of self-esteem (SE) completed by 95 undergraduates are used to explore: stability & level of SE as predictors of excuse making; the extent to which self-ratings of stability are related to a statistical index of SE self-esteem stability; & the relations between stability & a variety of other psychological constructs. Results indicate that for high SE individuals, instability is related to greater excuse making following success, but not following failure; for low SE individuals, however, the opposite is true. Self-ratings of SE stability are only minimally related to a statistical measure of stability based on repeated assessments of SE, & SE stability is not significantly correlated with SE certainty. In addition, the pattern of correlations between certainty & other constructs suggests that uncertainty reflects the phenomenal experience of a tenuous self-view. On the other hand, SE stability reflects the extent to which one's self-view is malleable, which may not be completely available to conscious awareness. The nature of SE stability & the roles of stability & level of SE in reactions to evaluate events are discussed. 3 Tables, 1 Appendix, 49 References. Adapted from the source document.

¶ An examination of Erving Goffman's view of context in his analysis of face-to-face interaction in *Forms of Talk* (Philadelphia: U of Pennsylvania Press, 1981) & other works. In Goffman's theory, people in social situations align themselves into groups constituting various modes of access. In the case of encounters, alignments are in agreement with officially accepted frames specifying: (1) the exclusive function of the rule of irrelevance; (2) the scheme of expression & interpretation; (3) the transformation rule; & (4) the organization of involvement. The modes of alignment can be changed by shifting to different channels of encounter, downkeying, upkeying, fabrication, or flooding out in relation to interactional tension. The relationship between an encounter & the social structure is determined by factors officially qualified to guide the encounter & influence the stability & vulnerability of the official frame. 25 References. ¶ Stories told in conversation are not fixed recitations of a narrative; rather, both storyteller & listener shape the story throughout its course. In an examination of assisted storytelling–ie, when participants share knowledge of the source events for the story–the sequence of story preface, telling, & reception are delineated. Co-telling a story, it is argued, is a moment-to-moment, methodical possibility. A form of sociality is described that highlights its emergent, contingent, interactive, yet routine character. Assisted storytelling is shown to be a systematic elaboration of storytelling organization, with opportunities for a story consociate to participate in both delivery & reception. 36 References. ¶ Existing studies of the effect of gender on interaction style have tended to suggest that males are more competitive than females: interrupting more often, offering supportive back channels, etc. More recently, C. Trimboli & M. B. Walker found that disagreement over an attitude issue elicited a more competitive interaction than agreement ("Switching Pauses in Cooperative and Competitive Interactions," *Journal of Experimental Social Psychology*, 1984, 20, 297-311). Combining both themes, the current study employed pairs of male & female same-sex dyads (N = 11) discussing choice dilemma items in the contexts of agreement & disagreement. In addition, the seldom studied aspect of participant familiarity was examined. Analyses of various features of interaction style revealed that, in contrast to agreement, disagreement produced a highly distinctive pattern of discussion with fewer back channels, less overlap, & fewer but longer turns. However, there was no increase in interaction rate nor any rise in either successful or unsuccessful interruptions, all accepted markers of high competitiveness. Reasons for this "debating" style are discussed. 1 Table, 22 References. Modified AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ The concept of the "move" as a unit of analysis in technical service interactions is presented & used as the basis for a theory of organizational knowledge, examined through analysis of data from participant observation at 2 software support hot lines. In responding to calls from customers, technical support specialists were found to use a core set of moves that reflected the structure of the organization & embodied the distinctively organizational aspect of collective performance. Transferring a call, eg, reflected division of labor, while escalating a call reflected hierarchy. A pragmatic definition of knowledge as situated performance rather than abstract representation allows organizing moves to become a logical foundation for a theory of organizational knowledge. 1 Table, 53 References. ¶ Harold Garfinkel's ethnomethodological experiment (*Studies in Ethnomethodology*, Prentice Hall, 1967) is often drawn on for philosophical analysis of ordinary language, which, it is argued, then becomes an empirical procedure. The ethnomethodological experiment is described as a procedure in which the existence & nature of a social norm is demonstrated by flouting the putative convention & observing what reaction that produces in the social group within which the convention is assumed to operate. Examples are given of the use of ethnomethodological experiments, demonstrating the existence of otherwise invisible conventions governing human social behavior. Comparable examples are cited from the writings of ordinary language philosophers of ethnomethodological thought experiments designed to demonstrate the existence of linguistic conventions. 14 References. ¶ Underage female consumers of alcohol in music clubs create temporary identities through communicative performances that are designed to gain them access into clubs & bars. Such performances are created during interaction with male club gatekeepers, who judge the legitimacy of the performances, & of identification cards ("IDs"), in an interaction context of suspicion designed to uncover the identities of underage consumers. Here, based on participant observation, unstructured interviews, & document analysis, described are various informing social contexts, the constitution of "good fake IDs," conventional performance practices that female consumers & male gatekeepers enact in a particular interaction context, & flirting & teasing as two types of gendered performances. The performance of "fake ID" transforms the contexts of subsequent performances in Clubland as well as guiding communication practice in other contexts. 23 References. ¶ An examination of relationship themes in the conversations of 52 married couples suggests that implicit aspects of relationship definition are reflected in the content of discussion themes & in the way that various themes are integrated. As hypothesized, communal themes were expressed more frequently, & individual themes were expressed less frequently by couples who were more psychologically interdependent, more conventional, less assertive, more satisfied, & older. A qualitative analysis of transcripts examined how relationship themes were integrated, based on the chaining out of themes by successive speakers. Three forms of interaction (blending, differentiating, & balancing) were identified as reflecting varying levels of integration. ¶ Politeness in the exchange of forms of address is examined in light of P. Brown's & S. C. Levinson's theory (*Politeness: Some Universals of Language Usage,* Cambridge: Cambridge U Press, 1987). A conceptual analysis of the elements of politeness, eg, status & solidarity, was conducted for six kinds of nominal address exchange & for the politeness expectations for different categories of social relationship. Theoretical values of politeness are compared to the politeness of address exchanges collected in a series of prior studies. Results agree with Brown's & Levinson's postulation that negative politeness outweighs positive politeness. Problems were discovered with the formula for determining the importance of face-threatening acts, & it was determined that greater weight should be given to status than to solidarity when considering the causes of politeness. The feasibility of the position that negative politeness is more polite than positive politeness is discussed, along with implications of the present results for understanding the expression of solidarity & the relationship of affect to politeness. 5 Tables, 21 References. ¶ Social transformations & political revolutions affect not only the high & mighty but also the average citizen. The effect of social transformations such as those recently occurring in eastern Germany can have a profound effect on an individual's life, equal to that of an accident or illness. Biographical interviews are useful in assessing the impact of such events, because, unlike objective, highly structured measurement techniques, they reveal how Ss themselves view the effects of historical events on them. The interview provides information on the S's self-image & worldview. In contrast to traditional interviews, a new approach is advanced whereby Ss develop their own master plan, serving as a form of self-help during the transition stages of radical social change. The master plan per se can become both a topic & a methodological instrument. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ Max Nordau's book *Degeneration* (1892) chronicles the nerve-shattering advance of modernity, addressing degeneration as symbolized in art & literature. His best known period was his Zionist advocacy phase, in which he called for regenerating the Jew's dignity & encouraging the emergence of the "New Jew" from the debris of the Eastern European diaspora. Roughly parallel with early twentieth-century concepts of nationalism in Europe, Nordau's New Jew epitomizes middle-class manliness in response to prevailing degenerate trends. Nordau was a prominent liberal, pragmatist, & practitioner of the scientific method. Tending toward the right-wing, his approach to Zionism was sober & practical, in comparison to that of Theodor Herzl. He believed in a native soil & in the struggle for existence. After WWI, his discourse became more militant, calling for a Jewish majority in Palestine. J. Sadler (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ The aging process is examined as "managed utility" in a case study of the "table dancer"–a kind of strip-tease dancer–drawing on interviews with bar managers/personnel & dancers (total N = 56+) in the southwestern US. Challenging typical aging theories that assume old age is a status conferred on individuals at the end of the life course, it is argued that table dancers grow old as a managed contingency of self & setting. The aging dancer may leave the occupation, often to return to it later, or carve out a niche for herself in the business, virtually eclipsing retirement. Each solution requires the table dancer to manage her worklife through the choice of setting & particular roles played in it. 25 References. Adapted from the source document. In addition, African men seem to have withdrawn from their financial & labor obligations to the household, leaving women the sole supporters of their families. In an examination of the relationship between rural women's position & gender

relations in the household, questionnaire data were obtained from 740 women, ages 16-50, & 80 men, ages 19-45, in Kisii, Kenya, 1985-1992. ANOVAs indicated that moratorium & achievement Ss had higher scores than did foreclosure & diffusion Ss for experiential orientation; moratorium & foreclosure Ss were diametrically opposed on instrumental & experiential orientations. Chi-squares showed that high-identity-status Ss were characterized by high dialectal thinking, & low-identity-status Ss by high formistic thinking. An instrumental orientation correlated with formistic thinking & an experiential orientation correlated with dialectical thinking, as expected. Results indicated that the identity process operates between formation & maintenance of structure & openness to change. ¶ The validity of information obtained through oral history interviews has often been questioned because many people tend to recall the past in a nostalgic way. To investigate possible distortion of negative events, telephone interview data were obtained from 15 Dutch residents who had served the Nazis in the Waffen-SS secret police during WWII. Correlation of the data with dossiers from official investigations reveals a measure of discrepancy; however, this does not totally negate the value of oral history. ¶ Accepting work abroad, often viewed as temporary, sometimes lead to permanent employment & naturalization to foreign citizenship. Important factors in this process occur on two fronts. In the home country, high unemployment, low wages, & a low standard of living make returning home impractical. In the host country, a high standard of living & birth of children make a permanent stay seem attractive. Immigrants from Croatia are often lumped together with other nationalities from the former Yugoslavia, making it difficult to obtain accurate information about Croatians abroad. ¶ It is argued that the theoretical & methodological development of the Africentric conception has remained preparadigmatic within the scientific arena because of insufficient attention to the demands of theory for a viable & explicit methodological framework. Two aspects of the Africentric conception that illustrate the crisis are explored–the absence of teleological perspective & operational problems of racial comparison–which in turn lead to more fundamental problems in the logic of racial comparison. Optimistic that these limitations can & will be overcome, it is concluded that the Africentric conception probably ultimately represents the right path toward understanding the construction of knowledge & the justification of ideological programs. 34 References. ¶ Divali, a popular annual Hindu celebration in New York City's South St seaport, is the site for an exploration of domestic violence within a larger context of how "national" & "female" identities are culturally constructed. Amid the assortment of handicrafts, dance, & food from different Indian states, public displays (eg, a mock Hindu wedding) & one particular private scene involving an "other women" (never indended to take place at the cultural festival) reveal telling aspects of the Indian immigrant identity. In particular, it is argued that the trope of "nation," as used by the Indian bourgeoisie, reflects a particular political strategy; therefore the "betrayal" of the Sakhi, who have struggled to ameliorate domestic violence, is properly understood as a construction by the Indian bourgeoisie to suit its own purposes. 20 References. Bonacich, Edna (U California, Riverside 92521), **Reflections on Asian American Labor,** *Amerasia Journal,* 1992, 18, 1, winter, xxi-xxvii.

¶ The changing focus of Asian-American studies is discussed. While 1960s pioneers in the field struggled against capitalism, racial oppression, & imperialism, late 1980s-early 1990s researchers are overly concerned with middle-class (Mc) interests, eg, anti-Asian quotas, small business ventures by newly immigrated Asians, & removing glass ceilings. It is suggested that this trend overlooks the great number of Asian wage laborers who will never attain Mc status. A call is made for a return to the collectivist orientation, with a focus on women in the workplace. The continuing bias against Asian workers, even from the unions, must be reversed. J. ¶ Within the framework of ethnicity & modernization theory, an overview is given of 15 case studies presented at a UN Research Instit for Social Development conference in Dubrovnik, Crotia, in June 1991 as part of the Ethnic Conflict & Development project. Latent & active conflicts in a number of countries were discussed. After defining ethnic group, ethnic identity & conflict, & modernization, special attention is given to objective features (language, religion, territory, social organization, culture, race) & subjective features (individual group consciousness, internalization of group values & symbols, belief in common origin, heritage, & common destiny). Analysis of primordialist, culturological, normative, Marxist, & rational choice theory shows that there is no complex approach to the issue of ethnic conflict. New responsibilities are foreseen for the international system in controlling ethnic conflicts. 27 References. Adapted from the source document. ¶ While current US academic analyses of the origins of conflict in Yugoslavia & other multiethnic postcommunist states point to ethnohistorical factors, it is suggested that this view is informed by two clichés: (1) the primordial approach centers on the cultural ethos of an ethnic group necessarily linked to a specific politico-economic model; & (2) the liberal-functionalist-Marxian approach idealizes the independent nation-state that embodies institutionalized unequal opportunities for ethnic minorities. Insistence on either approach leads to the delegitimization of peace & civil/human rights movements. An alternative analysis proposes to distinguish communist authoritarianism from newly emerging forms of nationalist authoritarianism, & to identify the strategies of ethnic mobilization & homogenization. ¶ The historical formation of Romanian identity is traced to set the current identity crisis of postcommunist Romanian society in historical context. The formation of identity, with reference to the three major ethnicities in Romania–Moldavian, Valachian, & Transilvanian–is analyzed as evolving from: (1) external dynamics rooted in Romania's historical peripheral status, & in dependence/independence relations with foreign powers; & (2) internal dynamics based on constant structuration & restructuration of society vis-à-vis, eg, feudal & gender relations. The continuity of communist identity formation with the Romanian past is demonstrated. I. Shagrir (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ Since the 1960s, middle-class (Mc) blacks have experienced a greater degree of social mobility than in the past because of the plethora of white-collar occupations now available to them. It is suggested that the rise of blacks into the ranks of the Mc will function to slowly dissipate racial solidarity &/or social cohesion between themselves & lower-class blacks. For the Mc, the priorities of work & living a Mc lifestyle will, over time, take precedence over attachment & identification with issues involving race. To some degree this has already occurred; as a result, the black Mc's traditional leadership role in the black community has been altered. 50 References. ¶ To investigate relationships between Czechs & Slovaks, questionnaire data were obtained from 4,000 people from throughout Czechoslovakia in Oct 1990 & from 1,000 people in Slovakia only in May 1991. Analysis reveals that the Slovaks are not as well versed in their distant history as the Czechs. Both groups tend to hold the founders of modern Czechoslovakia after WWI as the greatest national heroes. Czechs see the changes from communism to democracy in a more positive light. Slovaks are ambivalent toward the independent state of Slovakia created during the Nazi era. Czechs view Slovaks as culturally & economically backward, while they see themselves as hard-working & enterprising. Special attention is given to the idea of the Slovak cultural inferiority complex & its relationship to calls for the creation of a separate Slovak state. 5 Tables, 3 Graphs, 1 Appendix, 7 References. ¶ Content analysis of advertisements from the *Virginia Gazette* (1736-1780) is used to explore the motive frameworks attributed to runaway slaves, focusing on the role of contradictory background expectancies in the production of the threatened identity associated with the status transformation, from slave to runaway. Discussed are: words designating the humanity of the slave; names & nicknames by which a personal slave identity was indicated; titles referring to structural relations; & terms detailing relationship categories. Different types of runaway slaves are discussed, the process of escape is described, & relations among runaways & sympathetic others are explored. The advertisements demonstrate that structurally vulnerable individuals experience of status transformation is partially determined by larger collective forces as well as other individuals. 1 Table, 1 Appendix, 87 References. ¶ Concerned by an oversight in considering the distinctive character of ethnic images & the context in which they are fashioned, the ethnic self-images ("imago") & perceptions of social reality ("correlative space") that ethnic groups propagate in periods of ethnic tension are explored. It is suggested that self-images cannot be fully comprehended without ac-

companying perceptions of reality, particularly in surcharged times. Illustrations from Punjab, India, primarily of the Sikhs, are drawn on to examine aspects of ethnicity that become relevant in a political & conflict-ridden context. It is argued that combative ethnic identities are perpetually changing, because they never emerge in isolation, but take shape in a dynamic context. In the case of Punjab, while the Sikh imago projects the view that the Sikhs are just, religious, & humane people, there is a limit beyond which they will not allow themselves to be pushed. The Indian government, with its repressive apparatus working at the behest of the Hindus, has pushed them beyond that limit, & hence they must strike back (ie, by joining the militant *mundas*). To become the Sikhs' source of legitimacy once again, the state must reestablish its triadic position as the name of the father, as the fount of legitimacy, & as the source of those vital symbols that constitute the nation-state. 39 References. ¶ In a critical assessment & remembrance of cultural studies (CS), it is noted that the establishment (in 1964) of the Centre for Cultural Studies in Birmingham, England, was actuated by a burgeoning awareness of the need for rigorous, scholarly investigations of cultural changes in post-WWII England brought about by: the ascendancy of electronic mass media, the growth of youth cultures, & the effects of "postcolonial" subjects from Third World nations. Personal experiences as a founding member of the Centre are drawn on to explore the evolution of CS's methodology & its analytical dissection of racism in English culture. It is shown that CS's difficulty in analyzing race lies in the absences & displacement with which Western culture simultaneously perpetuates & dissimulates racial meanings, & positions subjects. The mission of CS, it is concluded, is to mobilize its intellectual resources to understand the differences that lie at the core of our cultures & ourselves. W. Howard

Here, after a brief overview of the building & breaking down of walls of division, the role of religion in the future South Africa is considered, with special emphasis on the role of Christianity. It is concluded that a major solution to South Africa's many problems lies in the ability of the different religions to fulfill their particular roles &, in the case of Christianity, to be truly the body of Christ. 7 References. It is contended that the emergence of ethnicity, in concert with the proliferation of pluralist ideals, has resulted in a deeper politicization of society, a restructuring of the foundations of group formation & personal identities, & a rethinking of the bases of civil society. At the same time, attitudes toward the Japanese enemy were much more visceral in their anger &

hatred than they were toward the Germans. Exegesis of the film scripts suggests that pure hatred of the Japanese qua Japanese was a given, but that Nazi enemies were carefully separated from "all" Germans. ¶ During structured in-home interviews, 244 first-generation immigrant women from Haiti & India in Montreal, Quebec, rated their identification with (self-perceptions), & the extent to which they believed majority Canadians perceived them as being (metaperceptions), Haitian or Indian, immigrant, & Canadian. An attempt was made to predict self-perceptions on the basis of pragmatic (years in Canada, age at arrival, citizenship status) & social psychological (motivation for culture retention, perceived discrimination) predictors. Multiple regression analyses reveal that, although both samples expressed a strong identification with their ethnic groups, different results emerged for immigrant & Canadian identifications. Identity perceptions for these labels were more closely related to pragmatic predictors for the Indian women, whereas social psychological variables were more predictive for the Haitians. Results are discussed in relation to the different visibility of the two groups, as well as other salient factors in a multicultural context. 2 Tables, 1 Figure, 18 References. ¶ In Europe, Islam became significant in forming a collective behavior & identity among migrants from the Maghreb, Turkey, Western Africa, & India during the 1970s, who perceived their migration as a lasting exile. In that way, Islam appeared as an instrument for building new identities & transnational solidarities for the purpose of negotiating with the states & societies of settlement. However, this peaceful approach presents an unacceptable challenge to secular societies, which do not consider religious values as a way of collective self-assertion. ¶ An examination of linguistic minority children's comprehension of language in the classroom & teachers' adjustment to their pupils' performance. Ss (N = 17 fifth graders in Norway, 4 of whom were linguistic minorities [LMs] from Pakistan & Turkey) were tested through development of measures based on recording of 2 hours of instruction on local history conducted by 1 of 4 teachers. Both Norwegian & LM Ss were tested individually after which several teachers were asked to evaluate the expected difficulty of the same test items for both groups. Results demonstrate that some of the LM Ss had serious comprehension difficulties, despite the fact that they were born in Norway & had all their schooling within the Norwegian school system. Words related to the physical context of the classroom & frequenty used abstract expressions were well understood, while less frequently used words posed problems for the weakest pupils, even in cases where the words were concrete & context dependent. The teachers correctly expected the LM children to comprehend less than their Norwegian classmates; however, they systematically accentuated the differences between pupil groups. It is concluded that the adjustment of communication in mixed classes is a pedagogical challenge & should be based on realistic expectations concerning the pupils' language comprehension. 2 Tables, 3 Figures, 33 References. Lüdi, Georges (U Basel, CH-4003 Switzerland), **Internal Migrants in a Multilingual Country**, *Multilingua*, 1992, 11, 1, 45-73.

¶ Results of a study on language-contact issues in Switzerland are presented Ss were so-called internal migrants, ie, Swiss citizens who had crossed one of the language borders existing in this multilingual country in search of better living, working, or studying conditions. Focus is on the Romand population living in the German-speaking cities of Basle & Berne Two major areas of research are noted: (1) how migrants experience the linguistic redefinition of their identity & the options they have in this regard, & (2) the role played by Swiss German or German/Swiss German diglossia. The study consisted of two components: semidirected conversations with couples & individuals (N = 35), & a questionnaire completed by Francophones (N = 371) & a control group of Romands native to Neuchâtel (N = 107). The acquisition by migrants of the local dialects is shown to be a major stumbling block to assimilation. However, it is noted that most migrants appear willing to learn the dialects in order to become integrated in the society. 10 Figures, 21 References. Adapted from the source document.

Lundgren, Nancy (Antioch U, Yellow Springs OH 45387), **Children, Race, and Inequality: The Colonial Legacy in Belize**, UM *Journal of Black Studies*, 1992, 23, 1, Sept, 86-106.

¶ A discussion of the problems of race & the reproduction of inequality, drawing theoretical linkages between what has been conceptualized as the world capitalist system & groups & individuals in specific places, at specific points in time, interpreting the demands of that larger system & translating the broader agenda into their own. Data are drawn from fieldwork in Belize City, Belize, undertaken in 1984-1989 where the socialization process & its impact on children was explored. Recognizing that children are socialized through interactions with their environment at multiple levels, specifically examined was the impact of those influences from the point of view of the child. The children revealed--through drawings, stories, doll play, & conversations--the complexity of negotiating within the twentieth-century, stratified, global community of which they are consciously & inextricably a part. ¶ A postmodern perspective is employed in an examination of the assimilation-pluralism debate in US society. The origins of the debate are traced to treatments of the "Jewish question" in the works of Max Weber & Karl Marx, showing that resolutions to it have continually foundered on the issue of color & its relation to culture. Intermarriage & its relation to pluralism are discussed, & Toni Morrison's claim that blackness is the "absence" that defines the "presence" of whiteness (see *Playing in the Dark: Whiteness and the Literary Imagination*, Cambridge: Harvard U Press, 1992) is critiqued using Jacques Derrida's notion of difference. It is concluded that, despite transcendence of the modernist liberal conception of ethnoracial justice, US society still suffers from ethnoracial dimensions. W. Howard

¶ A theoretical model is employed that views immigrant (or ethnic) enterprise as a product of class & ethnic resources in combination with a favorable opportunity structure. Data from evaluation reports on 272 immigrant small businesspersons entering Ontario in 1986/87 through the Immigrant Entrepreneur Program are drawn on to examine their country of origin, type & location of enterprise, & investment & employment levels. Immigrants from Hong Kong predominated among these entrepreneurs, though differences in type of business & location of enterprise among immigrants of different ethnic origins were apparent, with certain entrepreneurial areas dominated by particular groups. The overwhelming majority of immigrant entrepreneurs have located in the Toronto urban area, though enterprise location is largely a function of enterprise type. These findings are attributed to a combination of factors, including the presence of a sizeable Chinese community providing a strong support system & a complete set of ethnic institutions, an ethnic subeconomy, & government policy that has energized the small business sector. Combined with strong push factors, particularly the uncertain future economic status of Hong Kong, Ontario, especially Toronto, has become a logical & attractive location for small-scale East Asian immigrant entrepreneurs. 4 Tables, 18 References. ¶ Questionnaire & interview data collected in 4 previous studies (3 in San Francisco, Calif, & 1 nationwide) from 1,908 Hispanics & 14,425 non-Hispanic whites are drawn on to compare their response styles. Results consistently demonstrate that Hispanics prefer extreme responses to a greater extent than do non-Hispanic whites, & in general, tend to agree with a given item more. Two significant variables affect the rate at which these response styles are chosen: (1) with greater acculturation, the level of extreme & acquiescent responses chosen by Hispanics decreases; & (2) less-educated respondents tend to make more extreme choices than do those with at least a secondary education. Gender does not affect these response sets in a consistent fashion. 9 References. Adapted from the source document.

¶ The influence of in- & outgroup minority influence where group membership is determined according to a trivial categorization is investigated in 2 replications & extensions of a previous experiment (Martin, R., "Minority Influence and 'Trivial' Social Categorization," *European Journal of Social Psychology*, 1988, 18, 369-373). Ss in both studies were students age 15 from a comprehensive school in Swindon, England

(total N = 120). Experiment 1 replicates Martin's findings, showing that an ingroup minority has significantly more influence than an outgroup minority. In Experiment 2, when in-/outgroup membership was associated with a positive/negative image respectively, the ingroup minority had the most influence. However, when membership was associated with a negative/positive image, the outgroup minority had more influence than the ingroup minority. Results are interpreted as supporting an intergroup analysis of minority influence processes. 2 Tables, 23 References. Adapted from the source document.

¶ Mexico's national ideology holds that Mexicans are mestizos, a racially mixed group created by the union of Europeans & Indians. When Mexicans migrate to the US, this mixed racial identity comes into conflict with Anglo-American norms that view race dichotomously, ie, as Indian or white but not both. Here, data from the 5% Public Use Microdata Sample file of the 1980 Census are used to examine: (1) the process of ideological asimilation by which Mexicans in the US shift their identities from mestizo to white, & (2) the effect that race has on the level of residential segregation of Mexicans from non-Hispanic whites. Although residential barriers are not as severe for mestizos as for Hispanics of African heritage, results indicate that mestizos are significantly less likely than white Mexicans to achieve suburban residence & that this fact, in turn, lowers their probability of contact with non-Hispanic whites. 4 Tables, 63 References. ¶ Visual representations of African Americans on postcards from 1893 to WWI are examined. The caricatures found on these popular cultural artifacts frequently employed the visual metaphor of "other-as-beast." The discursive features of this form of racist ideology are outlined, focusing on the iconographic & linguistic strategies employed to depict African Americans as physically, intellectually, & temperamentally distinct & inferior to whites. While no oppositional readings to this racist discourse were located in the flipside messages of the senders, resistance was expressed in the contemporaneous African-American popular culture. 14 Figures, 45 References. However, only after the Hungarian uprising of 1956 did other refugee questions receive world attention. By the 1970s, a network of institutions & agreements were chartered under UN auspices. The model of the competitive formation of states can be applied to the current war in Yugoslavia & Croatia. Contrasts between Croatian & Serbian refugee movements are enumerated. ¶ The relationship between culture & ethnic identities in GB in the wake of the Salman Rushdie controversy is examined. Through processes of adaptation & negotiation, the many ethnic groups settling in GB have simulataneously changed & been absorbed in varying degrees into British culture to produce a multicultural society. White racism, long a characteristic of British history, still poses a problem for race relations, but of increasing import is conflict between principles & values of ethnic groups, as highlighted by the Rushdie controversy. Tolerance stemming from ignorance no longer holds promise for mending race relations. They key to future race relations lies in communication between groups & the creation of tolerance based on mutual knowledge & understanding. 5 References. D. Generoli

The Belfast Working Class, 1905-23* (London Pluto Press, 1991); & Bob Purdie, *Politics in the Streets: The Origins of the Civil Rights Movement in Northern Ireland* (Belfast: Blackstaff Press, 1990 (see listings in IRPS No. 68)). Whyte's claim that the conflict in Northern Ireland is best viewed as an ethnic conflict is challenged The book provides a historical framework for the periodization of writing on the conflict. Austen Morgan offers a Marxist reading of the Northern Ireland conflict, tracing the roots of the conflict to the Anglo-Irish war of 1918-1921, which altered the political & ideological context in ways that were harmful to the advance of labor. Purdie provides a microhistory of the conflict, arguing that Marxist analysis of the conflict fails to capture the intimacy of politics in Northern Ireland, not to mention the role played by individual initiatives. Both Morgan & Purdie show that understanding of the conflict hinges on an acknowledgement of the complicity between endogenous & exogenous factors. These three books, particularly Morgan's & Whyte's, are solid contributions to the literature on Northern Ireland. W. Howard

¶ The connection between achieved ethnic identity & self-esteem is examined, utilizing data obtained in 2 in-depth interviews, conducted 3 years apart, on perceptions of ethnic group membership with 18 Asian-American, black, & Hispanic adolescents (age 16) in the Los Angeles

(Calif) area. Self-esteem was assessed at both times with the Bronstein-Cruz & Rosenberg Self-Esteem Inventories. T-tests showed, as hypothesized, that adolescents at lower stages of ethnic identity at Time 1 moved to higher stages at Time 2. Cross-lagged panel correlations showed that ethnic identity stage was significantly correlated with self-esteem at both Time 1 & Time 2, & predicted self-esteem at Time 2; self-esteem also predicted ethnic identity stage at Time 2. Self-esteem & high ethnic identity were interactive. Results support a sequential model of ethnic development, although the small sample size makes regression analysis problematic. 1 Table, 1 Figure, 27 References. On South African railways, & in other public services, the era of strict apartheid began in 1953 when the National party was elected to office a second time & passed the Reservation of Separate Amenities Act. Accordingly, not only was racial separation perpetuated, but racial inequality was officially sanctioned. Although the Act had a wide compass, it was primarily a response to protest about the introduction of partial racial segregation on trains & at railway stations in the Cape Peninsula. For thirty years, train passengers there had escaped the formal segregation that applied to other railway services since 1918. Agitation (mostly by white Parliamentarians) to end the anomalous situation began before the advent of the apartheid government in 1948. For five years thereafter, segregation measures provoked serious, concerted objections from black people & organizations. The switch from segregation to apartheid on the railways (& in other public facilities) was not the result of any prolonged failure to secure racial separation throughout South Africa, nor of intensification of racial attitudes. Rather, apartheid was the legislative backlash to hostility to the novelty of enforced segregation on the suburban railways. The separate-but-equal loophole that protesters exposed prior to & during the 1952 Defiance Campaign was blocked quickly by the government before customary racial segregation operative elsewhere was undermined. To understand how those in diaspora view their "nation," 11 Palestinians studying in Kan were interviewed about their attitudes toward the Palestinian nation, leadership, & goals & the processes of socialization & politicization for Palestinians. Respondents (Rs), including some US residents & other residents of Arab countries, indicated that the family was of major importance to politicization, even though the majority had never been to Palestine, they traced their roots to a particular village. The well-connected Palestinian community in Kan was also important to them. ¶ An estimated 6,000 Jews from the USSR first arrived in Vienna, Austria, as a transit point to Israel or the US, but eventually decided to stay in Austria. Two different groups can be distinguished: (1) Ashkenazim, who left Germany in the twelfth century for the European parts of the USSR; & (2) the Sephardim, with origins in Spain, Portugal, & Iran, later moving to Turkey & Central Asia, along with some descendants of the Khazars of the Caucasus region. The Soviet Jews in Vienna are relatively heterogeneous, with different types of integration problems, although they can still be seen as a single group. Integrational processes are not the same as assimilation; however, they nonetheless cause problems for both the immigrants & the Austrians. In light of the destruction of Austrian Jewry during the Holocaust, Austrians & Germans have the obligation to facilitate the integration of these new arrivals. 1 Table, 6 Diagrams, 26 References. ¶ In the 1980 US Census, 40% of Hispanics identified themselves as "other" in terms of race. Here, an attempt is made to understand why a nonrandom sample of 58 Latinos in NY, the Midwest, & West identified themselves as "other" on a replica of the 1980 census question on race administered in 1989/90. Of the 58 respondents, 36% were Dominican, 17% were Ecuadorian, 28% were Puerto Rican, 16% were of other Caribbean or Central or South American origin, & 3% were of mixed Latino origin. The results vitiate the explanation that Hispanics who identify themselves as "other" are racially mixed or simply misunderstand the question. Tension between the two groups increased in 1990 under the agitation of new political parties, eg, the Slovak National party. There was an attempt to legalize Slovak as the only official language. Key issues include: the historical self-identification of Hungarians in Slovakia, opinions on the legal arrangement of the Czecho-Slovak state, economic reform, political preferences, concept of democracy, importance of the nationality problem, & ethnic stereotypes. The ethnic tensions that came to the forefront in mid-1990 decreased considerably by 1991 & the number advocating emigration of all Hungarians to Hungary dropped from 44% to 39%. 1 Table, 4 Graphs, 10 References. ¶ The multicultural approach to teaching US history is strongly opposed by a heterogeneous coalition of conservative & liberal historians concerned with an individualist ideology, personal merit, the fundamental equality of all persons, & promoting a unifying melting pot. The subversive dangers of continuing a cult of ethnicity lie in aggravating existing racial tensions by highlighting dissent & difference. It is suggested that the truly democratic agenda for education calls for sensitizing students to differences in terms of an evolving identity created by history. 3 References. J. Sadler

¶ To investigate language usage patterns by Slovaks, Czechs, Poles, & Germans in the Ostravka & northern Bohemia regions of Czechoslovakia, 4 questionnaire surveys were conducted 1967-1987 (total N = 6,000 respondents, age 15+). Many Slovaks appear to be losing some knowledge of their own language as elements of Czech are entering their speech. About 74.3% of Slovaks in northern Bohemia speak Czech to their spouses & 82.9% to their children, compared to 54.5% & 62.4% in the Ostravka region. The use of Czech in mixed marriages is especially pronounced. Expanded educational & cultural opportunities to use Slovak in these areas would help sustain retention of the mother tongue. ¶ Analyzing the U of Hawaii as a bastion of white male American supremacy, personal experience in the American Studies Dept with racism & sexism are detailed. Harassment was experienced for political beliefs as a Hawaiian nationalist & for resistance to continued US dominance over Hawaii. Individual experiences as a Native Hawaiian woman are placed in the context of the colonial subjugation of the Hawaiian people, their lands, & culture under the US government. Connections are drawn between the results of the overthrow of the Hawaiian government in 1893 & the continuing subjugation of Hawaiian people & culture. American Studies as a department, & the U of Hawaii as an educational institution, are seen as direct agents of the US system, supporting an over-

lming white faculty (nearly 80%) in a university where 80+% of the ents are of color. It is concluded that organized, vigilant resistance cism & colonial oppression are the only ways to combat the institual forces that keep universities both white & male, & ideologically American. Wilns, *The State against Blacks* (New York: McGraw Hill, New Press, 3 [see listings in IRPS No. 68]). Suggesting that Booker T. Washingis the ideological forefather of the three authors, analyzed is his contion that if black people face difficulties in the struggle of life, they of their own making. Washington is then compared with Sowell, ele, & Williams, who, it is argued, have written books that validate US "bootstraps" idea of success, which stands in opposition to the losophy of affirmative action. It is contended that the authors have hing new to say about race relations or how the government should ceed in this area of national concern. In A False Vision of Black blems, Williams argues that the civil rights struggle has been won. y vision that includes discrimination yields a set of policies harmful the long-run interests of blacks. A test-based study of the educational attainment of 2,000+ children es 7-15 from 6 different ethnic groups attending schools (N = 25) near ambridge, England, revealed that children of Pakistani & Bangladeshi igin tended to obtain the lowest mean scores on all tests, often well bew those of West Indian children, who tended to perform as well as Indin children & often no worse than the indigenous majority. There were w signs of any reliable trends over age. Differences were more pronounced on tests of reading & vocabulary vs mathematics, but on tests of nonverbal reasoning, most ethnic minorities also obtained low scores. Many of these differences were associated with differences in social & family circumstances. 5 Tables, 3 Figures, 17 References. Adapted from the source document. ¶ In an analysis of anti-Semitic attitudes in Poland, both Jews & Poles are considered in relation to modernity. A four-angle scheme of Polish anti-Semitism is constructed: (1) frustrated Polish modernity opposes Jews as symbols of modernity; (2) Polish modernity views Jews as obstacles to modernity; (3) Polish tradition juxtaposed against Jewish tradition; & (4) Polish tradition against modernity symbolized by the Jews. It is suggested that whether Jews are conceived as personifying modernity or traditionalism, in either case they serve as objects of hatred. This analytical framework is applied specifically to the post-WWII period, noting the impact of constitution & decomposition of communism. I. These stereotypes are not supported by empirical evidence, which suggests a wide diversity of marital & war bride experiences. Balanced social science & historical research is needed. D. Introduction, 77-82.

¶ In The Themes of our Epoch, Glenn Omatsu introduces a bibliography of 1991 scholarship reflecting issues relevant to Asian-Pacific Americans. The need to analyze questions relating to growing poverty in the US & the expansion of the underclass in the nation's inner city is emphasized. It is argued that, relegated to the background of prevailing research framework are: (1) the people now classified an undocumented immigrants with limited civil rights, & (2) the massive transfer of wealth from the poor to the rich that has occurred during the past decade. In this time of rapid growth of Asian-American studies, there is a need to deal with the role of transnational corporations in the communities & to grapple with questions of domination & liberation & their application to the Asian-Pacific American experience. A compilation of 1991 scholarship in Asian-American studies is presented under the headings of: research issues, bibliographies & methodolgy; contemporary politics & social movements; culture, literature, & folklore; demography & geography; education; family relations; health & medicine; historical studies; identity & assimilation; interethnic relations; labor, business, & economy; psychology & counseling; religion; theories of race & ethnicity; & women. (GER)

¶ A sociological definition of exile situations is proposed, & a typology contructed of the major situations generating forced migrations. This approach allows for the specification of the relationship between the changes in flows of exiles & the evolution of asylum policy in Switzerland since the early 1950s. It is contended that asylum seekers arriving since the mid-1980s are fleeing situations of political violence the same way as those who received the status of refugee between the 1950s & 1980s; however, the types of violence involved are no longer the same. Reasons why the receiver-state no longer recognizes the legitimacy of refugees' reasons for fleeing are discussed, & linked to its adoption of a restrictive policy in granting refugee status. 2 Tables, 26 References. ¶ At present, UN statistical data indicate that 15+ million refugees are scattered around the world, most of them in poor Third World countries. No matter where they seek safe haven, they continue to suffer from the malaise of being uprooted, & struggle to survive in new & alien environments. The number of refugees has increased beyond expectations & most have stayed long enough to expect final resettlement in their countries of asylum, a process that requires wider, more comprehensive & long-term management & rehabilitation interventions. Discussed here are issues of refugee health & social problems within their wider context. Comprehensive & integrated approaches in assessing the needs of refugees in both developing & industrialized countries are reviewed, with emphasis on the latter &, when appropriate, using the UK experience as an example. 2 Tables, 1 Figure, 14 References. The purpose of the conference was to examine developments concerning refugees & other forced immigrants, & to consider possible responses to these situations. Although no clear consensus was reached, several issues received attention, including: the ramifications of changing definitions of refugee, the plight of internally displaced persons, governmental responsibilities for refugees, & the adequacy of the institutional framework in dealing with refugees. ¶ When civil war broke out in 1991 in the former Yugoslavia, many ethnic Hungarians & Croatians fled the violence in regions of eastern Slavonia & Vojvodina & found refuge in nearby Hungary. Most Croatian & Hungarian refugees were positively inclined toward applying for Hungarian citizenship, but Serbian refugees were not. Respondents of higher social status found accommodation in private homes more easily than those of lower status. ¶ An overview of the problems that occur when Romanian Gypsies are housed at an emergency shelter in Geneva, Switzerland. Each Swiss canton is now struggling to decide what to do with the Gypsy refugees, since with the demise of the Ceausescue regime, Gypsies will not be granted political asylum. Most European countries abhor them as parasites. Social workers are not knowledgeable about their culture, religion, or language & have difficulty understanding their norms & values; as such, it is difficult to make Gypsies obey rules at the shelter. The role of the social case worker includes working with the clients to advise them of their realistic prospects for being accepted as an asylum-seeker. The limits of what case workers can do is stressed. In "Une Culture en état de siège: les tsiganes" (A Culture in a State of Siege: The Gypsies), Luc de Heusch (Instit Sociologie U Libre Brussels, Belgium) argues that the response of orderly Swiss society should be to let the Gypsies behave as they like in shelters or prisons without interfering. The case of Jan Yoors, a Flemish boy raised by both Flemish & Gypsy parents to become fully bicultural, illustrates how Gypsy & other cultures take advantage of each other. M. ¶ A critique is offered of two paradigms that have shaped the understanding of refugee health: the objectification of refugees as a political class of excess people, & the reduction of refugee health to disease or pathology. Then, alternative paradigms are recommended that consider the polyvocality of refugees & construe them as prototypes of resilience despite major losses & stressors. Secondary research is drawn on to trace the life history of refugees from internal displacement in the country of origin, to asylum in a second (usually neighboring) country, & for some, to permanent resettlement in a third country. Primary topics in the literature on refugee health are identified, along with key problems for further research. 97 References. Adapted from the source document. ¶ Of the three solutions advanced to alleviate the refugee problem in the twenty-first century–repatriation, resettlement, & integration–repatriation is seen as the most desirable by the public. In an

argument against repatriation, especially during armed conflict, it is suggested that researchers guard against being unwitting agents for worsening refugees' problems. Support is given for the Lawyers Committee for Human Rights, which issued a statement at a 1992 workshop proposing that any repatriation plan should establish that conflict has been abated, & its risks eliminated, before promoting refugee return. In addition, no refugees should be involuntarily returned to any country where they face persecution. 11 References. L. Dorn (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ Data from several secondary sources are drawn on to profile Melanesian West Papuans who have been seeking refuge in Papua New Guinea since Indonesia annexed the province of Irian Jaya in 1962. Although the government was at first receptive to these immigrants, over time, its treatment of them deteriorated. By 1988, many refugees were moved to camps that suffered from severe underdevelopment. The result has been social & economic marginalization, exacerbated by a lack of education, health, & other social services. 7 Tables, 3 Figures, 37 References. E. ¶ Cultural psychology (CP) occupies one of the most neglected positions of all the cultural sciences. Historically, psychology has understood culture more as a complex of external circumstances than as an area of research in a more restricted sense. A literature review describes the renewed interest in CP since 1987. Current interests center on achieving a working definition & scope of study for CP. It is hoped that this will lead to fruitful interaction between methodological & theoretical reflection on culture. Special attention is given to the category of aesthetic psychology. Also discussed are points of difficulty in current research, including the psychological analysis of everyday life. 16 References. M. ¶ All myths about the creation of the world serve three functions: (1) to legitimize political power; (2) to form an interpretive paradigm of human reality; & (3) to assign meaning to individual & collective life. Humanity's origin, present state, & final ending point are necessarily linked to provide an explanation of the meaning of life. However, while eschatological & apocalyptic visions must address these three time frames, more significance is ascribed by most cultures to the meaning of the end. Distinctions among apocalytpic visions, & between apocalyptic & animistic, continuistic, & positive types of eschatological models are discussed. Apocalyptic thinkers deny the possibility of humans providing meaning for their own life; however, it is precisely such a sense of meaning that must come from self-reflection if human life is to continue. 6 References. ¶ Eastern Germany fortunately possesses many youth centers established by the former regime. Currently, efforts are underway to change them from Young Pioneer centers, where communist values were inculcated, to leisure centers, where children can participate in art, dance, music, & theater in an atmosphere free from ideological constraints. Special attention is given to the center on Leibnizstrasse in Leipzig, where attempts are being made to rediscover the history of what had been a thriving Jewish neighborhood. It is hoped that, by uncovering this previously suppressed cultural legacy, an atmosphere of cultural tolerance can be established. The ultimate goal of the center is to foster artistic creativity without coercion. M. Meeks (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ Speech action theory is combined with a social realist perspective to extend the action-constitutive view of the nature of material cultural meaning to interpreting large-scale prehistoric architecture, using the "geometrical" embankment earthworks of the Ohio Hopewell Middle Woodland period as an empirical illustration. In this pragmatic-constitutive interpretation of material culture, various expressions of the dominant & reductionist alternative view–ie, referentialism–are rejected, arguing that referentialism is inadequate when dealing with any part of the archaeological record. The nonreductive position taken by the action-constitutive interpretive view is discussed in detail. By applying this perspective to the empirical data, it is shown that the embankment earthworks of the Ohio Middle Woodland period were intentionally constructed to embody the sacred animating powers of the world, thereby becoming monumental icons of that world. Only through these mediation powers could the builders/users endow themselves with the capacity to transformatively constitute the material religious practices of world renewal. 1 Table, 12 Figures, 58 References. ¶ The subaltern position of "Indian" history relative to the master narrative embodied by European history is discussed. Specifically, significant gaps are found in the history of Third World nations regarding transitional periods that result from incomplete development, modernization, or capitalism. The contradictory goals of Indian nationalists, influenced by the Western ideals of modern individualism (equality & individual rights), pits the interiorized self against the public citizen. The secular, historical construction of time & the nuclear family based on married partners are two modern colonial concepts challenged by Indians. The differences between the Indian & European modern ideas of public health & domestic hygiene, freedom & equality, nationalism, patriarchal clan-based ideology, & women's struggles against men are explored. For Third World historians, the project to provincialize Europe involves a radical critique &, ultimately, transcendence of liberal values & modernity, but cannot be a reduction to cultural relativism. 55 References. Doyle, Robert C. (American Studies Faculty Pennsylvania State U, University Park 16802), **Unresolved Mysteries: The Myth of the Missing Warrior and the Government Deceit Theme in the Popular Captivity Culture of the Vietnam War**, UM *Journal of American Culture*, 1992, 15, 2, summer, 1-18.
¶ According to government sources, 92,753 US soldiers remain missing in action (MIA) from the US's twentieth-century wars. In spite of the pomp & solemn continuous ceremony at the Tomb of the Unknown Soldier, there is a search for truth about the MIAs or prisoners of war (POWs) who were known to have been alive in capitivity. If & when facts, like prisoners themselves, are missing, subsequent actions have shown the existence of a powerful myth that acts as a circumstantial basis for action, ie, the myth of the missing warrior–a fervent belief held by a relatively large constituency nationwide that many live POWs were not repatriated after the end of hostilities, but remain in captivity against their will. Although the MIA issue has resurfaced after each war, the families of Vietnam MIAs have demanded more substantive answers

than were offered by the government to their predecessors. Forming advocacy groups, both benign & radical, they began to confront a government they thought lied to them. Mythic answers were offered in fiction & the movies. Some entrepreneurial advocates lost trust & patience with the government's efforts in the arena of international diplomacy & became independently operating privateers. Here, published data is culled to argue that the POW/MIA dispute reflects a common fund of tenaciously powerful traditional ideas held among many Americans who understand the issue as the last vestige of the world wars & the Cold war. Whether the missing are actually dead, assimilated into the former captor's culture, or being held in captivity against their will, the conflict continues to remain a deep cultural wound long after the cessation of hostilities. It should be clear that when there are so many unknown soldiers, little hard evidence, & so much media & public attention, myth becomes not only believable, but preferred. Though in fiction it continues to be characterized by traditional story-telling techniques, a formalized structure, & happy endings, in actuality, the dispute is far less lucid & may never have an ending. 2 Figures, 4 Illustrations, 23 References. du Boulay, Juliet (U Aberdeen, AB9 1FX Scotland), **Strangers and Gifts: Hostility and Hospitality in Rural Greece,** *Journal of Mediterranean Studies,* 1991, 1, 1, 37-53.

¶ In rural Greece, the division between "us" & "stranger" is broadly reflected in gift exchange, which is greatest between those who are closely related, converting gradually to "hostility" as the ties of blood & mutual interest weaken & disappear. However, this pattern is reversed as the element of competition with strangers is eliminated, a reversal typified in the hospitality shown to the complete stranger who is totally outside the normal village economy. This phenomenon is explained with reference to motives for gift-giving that involve spiritual values. Although these values are discernible in some gift-giving, larger economic pressures subordinate them to those of self-interest, & this is perceived as an aspect of humanity's fall from paradise. However, because the villagers simultaneously perceive their house & family to be rooted in the spiritual world, they are obliged to live out, even in a straitened economic environment, the values of unconditional giving typcial of this other world. The complete stranger is the only person to whom such giving can be offered without fatally undermining the material basis of the house; thus, it is only the outsider to whom the family can manifest what it feels to be its real identity–spiritual values. 13 References. ¶ A discussion of the relationship between agency & structure, or between holist & individualist orientations, in social analysis. The main empirical & methodological problem is the fact that it is becoming increasingly difficult to conceptualize society & culture as units of study when such systems are in important senses unbounded. Drawing mainly on empirical material from the population of Indian origins in Trinidad, it is shown how systemic levels as well as agency & structure interact in the creation of Indo-Trinidadian identity, which is to a great extent created through abstract mediating structures & not exclusively through face-to-face contact. 51 References. ¶ The Gesellschaft für Kultursoziologie (Society for Cultural Sociology) was founded in 1990 to preserve this discipline after German reunification threatened to wipe it out. In the former West Germany, cultural sociology (CS) had not existed as an organized academic subdiscipline. The society seeks to foster theoretical & methodological studies in CS through expanding university course offerings in this area. The primary focus of CS is self-analysis of the postmodern society. With regard to the new federal states of Eastern Germany, the key issues are cultural identity, community, & human capital. The potential exists for CS to assist in creating job slots in regions of heavy unemployment. Of course, timeliness is a key concern in view of the urgency of social problems involved in the reunification process. The possibility of maintaining at least a measure of continuity with the research sponsored by the former German Democratic Republic is explored. At present, almost thirty sociologists are members of the society. M. Meeks

¶ A literature review reveals the precarious position of cultural sociology, the result of a lack of precise definition of this subdiscipline's field of study, not only in Germany, but in other countries as well. A call is made for empirical studies in the areas of social customs, rules, & norms. Adaptation & transformation processes should also be investigated. The importance of studying social intermediaries & voluntary associations is noted. Art, education, political culture, mass media, & symbolism are also of primary interest. More attention should be given to the relationship between individual & social cultural participation. M. Meeks

¶ The juxtaposition of concern for human diversity, cultural hegemony, & the integrity of the academic canon contributes to the educational & political debates over curriculum development. In the forefront of the debates have been discussions of the validity of Africentric, Eurocentric, & multicultural perspectives in knowledge systems. Here, several questions that speak to curriculum development & pedagogy are discussed: (1) the changing demography of the nation & the problems these changes raise for education as a vehicle for nation building; (2) the tensions between political pressures favoring *unum* &/or *pluribus* in the society; (3) the changing nature of our conceptions of intellect & education; & (4) criteria for protecting the integrity of the canon. The argument is advanced that multicultural education has the potential for addressing all of these questions & should not be narrowly conceived as a debate concerning whose culture, knowledge, or voice is to be heard. Rather, elements of all voices are seen as essential to perspectivist thought & mature intellect. Approaches to education are advanced that are multicultural & multiperspectivist, & designed to enhance intellectual competence for all students. 8 References. Modified AA

Grimes, Dorothy G. (English Dept U Montevallo, AL 35115), **"Womanist Prose" and the Quest for Community in American Culture,** UM *Journal of American Culture,* 1992, 15, 2, summer, 19-24

¶ It is argued that the call for a more genuinely integrated societal community in Robert Bellah's et als' *Habits of the Heart: Individualism and Commitment in American Life* (New York: Harper & Row, 1985) is flawed by the book's silence about the women's movement & the absence of clearly stated assumptions about language & culture. *Habits of the Heart* reflects a concern that the women's movement endangers the human qualities embodied in traditional female roles. However, Alice Walker's two collections of expository prose, *In Search of Our Mothers' Gardens: Womanist Prose by Alice Walker & Living by the Word: Selected Writings 1973-1987* (New York: Harcourt/Brace/Jovanvich, 1983 & 1988, respectively) envision an American culture comparable to the one Bellah calls for. Walker's emphasis on community as a mental construct that has its genesis in a geographical place parallels Bellah's "community of memory." For Walker, the only way to reclaim a sense of community is to have a "double vision." Both Bellah & Walker emphasize the role of language in defining community, Bellah describing its power for remembering the past, & Walker viewing it as a means of reclaiming or constructing the past. She emphasizes respect for one's own language & the power of naming these phenomena that language itself encourages us to overlook, eg, in her use of "womanist" instead of "feminist." The nostalgic strain in Bellah & Walker reflects their common vision, though Walker makes clear that remembering who we are does not mean returning to who we were. 12 References. AA

¶ Engagement & disagreement in the field of the sociology of culture emerged with the institutionalization of cultural studies in the 1980s, leading to original debate about theory, method, & substance. Examined here are controversies surrounding meaning, power, action, hegemony, & methods. While the first four debates are described as productive in terms of future research, the fifth debate is deemed unfruitful. It is concluded that institutionalization has led not only to arguing, but to sharing–another sign that the field is gaining confidence in itself. 40 References. L. ¶ Between 1870 & 1914, Paris, France, had more drinking establishments than any other major city. Here, police reports, judicial archives, marriage & baptismal contracts, government studies, & newspaper & literary accounts are drawn on to explore the impact of this high density of drinking establishments on social & political life. Parisian café friendships indicate that the ideal type dichotomy of *Gemeinschaft* & *Gelleschaft* fails to capture the nature of café social interaction. In the concrete social world of the café, these concepts of social interaction were not opposites but, instead, options. Workers found both types of relationships useful in coping with the rapidly changing social & economic urban structures. Depending on the café & the group, these friendships could be either intimate & personal or anonymous & impersonal. The informal & spontaneous nature of café interaction promoted an ever shifting & intricate mosaic of small-scale social relations & subcultures. Such small-group interaction & the networks that developed were the basis for the Parisian schools of art, literature, & politics that emerged after the era of the commune & included socialism, impressionism, anarchism, syndicalism, & anti-Semitism. Café sociability was not statis; rather, it was able to adapt to changes in the urban milieu. Modified AA (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ It is shown that a phenomenology of culture offers insight into a sense of rationality that is consistent with a pluralist understanding of reason, which acknowledges that the predominance of logical-mathematical views of reason & understanding tend to exclude other forms of rationality or intelligence. Propositions developed by Edmund Husserl are used to explore: how culture is apprehended & represented in the mind, how self-displacing & representing function in the establishment of the we/us distinction, & the connection between *logos* (reason) & community. It is shown that the perception of cultural objects is informed by an apperception through a representation, & that *logos* is that which unites diverse points of view & makes possible the articulation of the we/us distinction & moral categoriality. Reflections are offered on the ideal kind of ethos for the achievement of *logos*. W. Howard (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ Many new phenomena are appearing in the five new states carved out of the former East Germany, eg, women's & children's centers, sociocultural centers, & cultural work organizations. Cultural associations of many types are springing up on the regional level, trying to encourage networking among people with similar interests. Differences are noted between sociocultural & cultural-pedagogical associations; the latter seek to facilitate cultural learning among all age groups & social classes, irrespective of origin, educational level, or gender. Cultural learning is fostered at various sites, eg, youth art schools, leisure centers, & city neighborhood centers. Emphasis is given to a philosophy of continuing education based on learning by doing. Examples are cited of projects engendering individual creativity, development of identity, the integration of previously isolated & meaningless components of life, & the acquisition of urban & cultural space. 10 References. ¶ A literature review is drawn on to examine the role of hermeneutics in the sociology of culture. Proceeding from the sociocultural significance of the term "understanding," precepts are advanced for a cultural sociology. In accordance with Soeffner's *Soziologies des Verstehens* ([Sociology of Understanding] 1981), it is emphasized that, for the initial investigation of any problem, methodological concerns should remain secondary to the basic question at hand. Objective & reconstructive hermeneutics address the influence of theory on the perception of the basic problem. The epistemological importance of socioscientific hermeneutics lies in the cultural-sociological reform of professionalism. Those cultural aspects commonly neglected become more plastic & distinct. ¶ The role of literary theory in the transfer of culture in the classroom is examined. History is nothing more than the sum total of culturally determined events recorded at a particular point in time & disseminated through literature. It is literature that provides the frame of reference for this culture transfer, not by providing a guide for social action, but by presenting text from which meaning is gained directly. Literary theory, thus, stems from writing & reading & not from sociohistorical convention. Literature provides a means of giving expression to social forces at work in the classrooms & schools. 38 References. Adapted from the source document. has made people concentrate on their material needs; cultural issues have been neglected. Moreover, the cost of cultural participation throughout Germany has risen substantially due to the financial burden of reunification. Sociologists need to understand the depth of the transformation processes, which are prompting many in eastern Germany to speak of colonialist cultural policies imposed by capitalist occupiers. ¶ The emergence & current predicament of cultural studies is examined, focusing on its interdisciplinary agenda & prospects for the future. Cultural studies' alliance with the New Left in GB is discussed, & strategies for developing a rational interdisciplinary project founded on a historical awareness of the construction of cultural studies over the last twenty years is advocated. Suggested strategies include team teaching, emphasis on comparative methodology, concern for socially relevant objects of study, & devotion to group research. It is shown that Pierre Bourdieu's concept of "intellectual field" (see SA 14:1-2/71E7507) can be seminal in reformulating intellectual history as central to cultural studies. To illustrate the importance of comparative study, some of the intellectual issues of the Annales school in France in the late 1920s & 1930s & the Centre for Contemporary Cultural Studies in GB in the 1960s are discussed, focusing on the relationship between language & culture. ¶ The embodiment of a mid-1800's "racial unconscious" in blackface minstrel performance in the US points to narrative paradigms of minstrelsy's origins: expropriation/absorption/miscegenation, & transfer of ownership/theft/slavery. Using historical ethnographic methods in an inquiry about readers & audiences, song lyrics from shows, beginning in 1843, highlight the rather illicit appeal of black men & culture & build on the white fascination with commodified "black" bodies. The problematic of reconstructing a viewing public may be approached by symptomatic analysis of contemporaneous critics, who seemed to assume a theory of the racial politics of US culture, trying to legitimate ideological quandaries. 115 References. It is argued that in the early 1970s, a rupture occurred that forced committed forms of criticism (eg, Marxism) to give way to more academic, hermetic, & dispersed forms of criticism. 11 References. ¶ The modern definition of "the social" is explored, after deeming its traditional meaning as outdated. The concept is usually understood as a specific mode of aggregating interests to render society more governable, through establishing intermediary institutions. Since its appearance in late eighteenth century, the notion has had strong economic & political connotations, inscribed in industrial relations. Today, however, the social question is twofold, encompassing socioeconomic & sociocultural questions. This duality may either obstruct the constitution of social conflict or enhance the destruction of classical forms of solidarity, thus weakening individual-collective ties. I. Shagrir

¶ An attempt is made to equate modes of consumption with an understanding of the fundamental nature of being by analyzing fashion in Trinidad. Drawing on an ethnographic case study of 4 communities within the town of Chaguanas, it is argued that fashion need not be regarded as inherently antagonistic to authenticity & may in fact be a medium through which ontological forms are constructed & realized. Fashion is broadly conceived to include preferences in interior design as well as in clothing. Theoretical traditions that relate fashion with superficiality are challenged, & the implications of fashion for individualism, competition, & social order are discussed. It is concluded that treatments of consumption that neglect the fact that consumers themselves tend not to view their purchases as consumption should be eschewed. Implications for the debate over postmodernity are discussed. 23 References. Adapted from the source document.

¶ Racial thought is discussed as an ethical structure involving the subject & the other understood as a race. Coinciding with the reemergence of racially motivated violence in Europe, several modes of racial tolerance have become manifest, each based on a normative element forbidding racism & promoting racial esteem, but with a regulatory logic that is not necessarily uniform in all cases. Three different variants of racial tolerance are analyzed: (1) a scientific axiology based on the ideal of cultural pluralism ("tropism") & its rule of tolerance; (2) the political axiology based on legal equality ("advocation") & its law of tolerance; & (3) a global pseudo-axiology based on the ideal of communitarian humanism ("globalism") & its norm of tolerance. The specific regulatory logic of each mode of racial tolerance is analyzed: the first through the texts of Claude Lévi-Strauss, the second through the International Convention on the Elimination of All Forms of Racial Discrimination, & the third through the implications of an advertising campaign by the Benetton Co. It is argued that each approach is based on a conception of difference rather than otherness, which means that the ethical structure of racial tolerance is necessarily similarity & dissimilarity at once, the very structure of racist thought itself. Thus, racial tolerance is an unfounded dream of using the logic of difference for benevolent purposes. A proposition to rediscover the radically other is offered. Modified AA

Based on analyses of biographies & autobiographies of bullfighters, literary & historical reports, & personal observations, the psychology of the bullfighter is explored. Crucial to understanding the bullfighter--& therefore the social dynamics embedded within which his professon serves as a particular compromise formation--are the concepts of masochism, sadism, narcissism, mysticism, & suppression. 22 References. ¶ The local construction of time & its possibilities for the practical constitution of society are explored via an analysis of a rural community in the northern Philippines. The discussion is premised on two arguments: the replacement of objective reality by systems of signification has rendered Newtonian & naturalistic conceptions of time inadequate & obsolete; &, in the electronic age, in which local time is a subunit of London/New York/Tokyo time, the Other is left without a time of its own. It is shown that in the Philippine community of Zamora, the constitution of time in ritual & practical structures of action provides the community with a coherence sufficient for its maintenance & reproduction. It is concluded that modernity's use of ritual to orient individuals in time has given way to postmodernity's penchant for reinventing time to suit its needs. 35 References. ¶ An exploration of the controversy generated by the unorthodox analysis of the production & reproduction of power in the African postcolony offered by Achille Mbembe in "Banality of Power and the Aesthetics of Vulgarity in the Postcolony" (*Public Culture*, 1992, 4, 2, spring, 1-30). By means of comparisons between the recent social theories of Gilles Deleuze & Felix Guattari, Michel Foucault, & Pierre Bourdieu, with that of Stuart Hall, as representative of the British Cultural Studies movement, this response underscores the analysis of power in the first tradition as an internalization of socially imposed & conditioned body images, reflexes, & habits that serve to reinforce social distinctions & subordination. Resisting such a microlevel analysis in favor of the neo-Marxist Gramscian point of view, Hall maintains a bias in favor of institutional analyses despite the introduction of culture as a critical category within the political paradigm. The central conclusion is that the contemporary French approaches have "exploded" the repertoire of notions relating to power & violence by considering laughter, eroticism, the sacred, sacrifice, & expenditure in their appreciation of how charisma becomes routinized in ways that invade the unconscious of social subjects who appear unable or unwilling to shed their servitude. By so doing, they extend the relevance of their understanding of the technologies of power beyond the blatantly oppressive regimes of Africa & Latin America to Western democratic societies as well. ¶ Most of the large bibliography about *toros* (bulls) believes that tauromachies are celebrations of a sacrificial kind. The behavior that the audience shows at the classic *corridas* (bullfights) & the risky way they act at the *fiestas populares* (popular festivals) is quite different from the typical conduct of the public during common mass entertainments. Here, it is argued that this difference is caused by the sacrificing origin of those celebrations. Drawing on a critical reading of Marcel Mauss's theory of sacrifice (Oeuvres, 1: Les Fonctions sociales du sacré [Works, 1: The Social Functions of the Sacred], Paris: Editions de Minuit, 1968 [1899]), analyzed are the *corrida*, where the *torero* (bullfighter) is the sacrificer & the audience is the sacrificient, as well as the *fiestas populares*, where both sacrificer & sacrificient are unified in the same collective subject, eg, the village young men. It is concluded that, like ancient hellenic & biblical sacrifices, present-day tauromachies include, in addition to slaughtering the beast, a collective banquet where the sacrified victim is devoured, scenes that reflect the origins of Mediterranean society. 12 References. ¶ Presented is a pragmatist view of cultural differences that avoids the leftist exaltation of the non-Western & oppressed, & eschews the Eurocentric assurance that all other forms of life are immature in comparison to that of modern Europe. How the concept of "rationality" is related to freedom & democracy is examined via readings of the work of John Dewey, & of Ashis Nandy, who argues that Dewey's work is indicative of a non-self-critical Western culture that, while priding itself on tolerance, is engaged in destroying cultural differences (see *Traditions, Tyranny and Utopias*, Oxford: Oxford U Press, 1987). The pragmatist view that modern technology has the potential to facilitate the realization of human desires is discussed in relation to the counterclaim that oppression is embodied in modern technology & science. Other issues discussed include the need for transcendence in an epoch of science, the irrelevance of evaluative hierarchies, & the Dewian view that human beings' rationality is continuous with that of all other organisms. Sofia, Zoë (Murdoch U, Western Australia 6150), **Hegemonic Irrationalities and Psychoanalytic Cultural Critique**, *Cultural Studies*, 1992, 6, 3, Oct, 376-394.

¶ Too often, psychoanalytic textual & cultural interpretations remain within official cultural categories, where there are only two genders; any kind of symbolic excess is inevitably coded feminine, & the structures of language & patriarchy seem universal & ahistorical. Moreover, textual critics may be content to merely register rather than unravel multivalent & polymorphously perverse signs & pleasure, & to note parallels between individual & textual/cultural symptoms without trying to account for the mutually productive influences of the individual unconscious & the collective formations, here called "the Mythic." These problems in interpretation are attributed in part to orthodox psychoanalytic narratives (especially Lacanian) that tend to enact rather than investigate sublimation by focusing on either the individual subject or the grand subjectless system of language & law (the symbolic), leaving unnameable gaps in between. Melanie Klein's theories of object relations & Geza Roheim's psychoanalytic anthropology are suggested as possible starting points for a reoriented psychoanalytic theory that could investigate the less formal &/or more poetic & ambiguous domains of culture that transmit & reproduce hegemonic irrationalities forming background preunderstandings & common metaphorical currency. The proposed shifts in perspective are illustrated through discussion of essays on technoscientific culture by Mary Ann Doane & Evelyn Fox Keller, from the feminist collection *Body/Politics: Women and the Discourse of Science* (Jacobus, Mary, Keller, E. F., & Shuttleworth, Sally (Eds), New York: Routledge, 1990). Doane's adherence to binary gender categories prevents her from addressing the relation between the apparent masculine fear of monstrous female fertility with the hegemonic irrationality of womb envy, as expressed in fantasies of tecnological fertility. Keller recognizes womb envy, but her pseudo-universal category of masculinity obstructs recognition of the important historical & institutional differences in the way womb envy is expressed. More sensitivity to historical & cultural variations in the scale & distribution of sublimations is called for, along with closer investigation of the causal relations between individual & collective irrationalities. 42 References. Further, their work is hampered by insufficient knowledge of Germany's recent cultural history, resulting from East Germany's official state culture & state-run economy. ¶ Debates for & against the development of social culture occupy an important position in the movement to recreate a unified German culture. Germany's division into eastern & western sectors after WWII led separate historical, political, & cultural paths that are difficult to rec cile. The collapse of communism also led to abandonment of certain litical concepts relating to cultural work among the masses, the devel ment of the socialist personality, & popular artistic expression. New pirical studies should consider the broad expanse & variety of socio tural topics, viewed as specific social phenomena with roots in a b way of life. Suggested topics include: regional groups; social, demogra ic, biographical, historical, & political aspects of culture; leisure act ties; value systems; subcultures; cultural infrastructures; & the role cultural workers. 17 References. ¶ Interior decoration texts of the late nineteenth-century US are exa ined as strategies for authenticating the Victorian bourgeois concept of self. It is suggested that while such texts served, on one level, to perp uate the hegemony of the bourgeoisie by justifying economic & social equalities, this hegemony proved unstable because the performance self through decoration & decorating texts reproduced the feeling weightlessness that is increasingly evident in the nineteenth-century Performing self through the metonymy of decoration functioned create the illusion of stability, a veneer that masked the inequalit fragmentation, exploitation, & anxiety produced by the emergence of dustrial capitalism. 33 References. ¶ An examination of Goran Hyden's concept of the "economy of affi tion" & the "uncaptured peasantry" as it applies to rural Tanzania is concluded that, although Hyden's basic formulation remains convi ing, a new perspective is added when the same concepts are viewed as c tural rather than economic constructs. Examples are provided of why t is so, based on a review of the classical sociological literature, & on p sonal experience working in Tanzania. Then, Wendy Griswold's metho ological framework ("A Methodological Framework for the Sociology Culture," in Clogg, Clifford (Ed), *Sociological Methodology*, San Fra cisco, 1987, 1-35) is used to assess how both the uncaptured peasant & the economy of affection can be evaluated from a sociology of cultu perspective. ¶ Following an introduction, reports are presented by three members of the Gesellschaft für Soziologie (D-7010 Leipzig, Federal Republic Germany) on projects in progress. Eveline Luutz, in **Projekt: Empirische Untersuchungen zum kulturellen Umbruch in Ostdeutschland** (Project: Empirical Studies of Cultural Collapse in East Germany), describes a project to create jobs in the new federal states carved from the former German Democratic Republic. Cultural specialists, sociologists, journalists, & computer experts are cooperating to identify solutions to the problems of high unemployment. Special attention is given to the collapse of the former East Germany & its effect on cultural models. Citizens find themselves in a new cultural & social context for which they must create new systems of meaning. Also discussed are problems of contemporary rural culture. Peter Schacke, in **Projekt: Evaluierung für gemeinnützige Vorhaben der kulturellen Bildung und Förderung** (Project: Evaluation of Useful Purpose for Cultural Education and Challenges), discusses the following components of this project: planning, implementation, control, & goals; modifications for cultural, social, & local political reasons; policy recommendations; & development of cultural management. Bamrbel Sânchez Coroneaux, in **Projekt: Multikulturelle Arbeit in den Kommunen der neuen Bundesländer** (Project: Multicultural Work in the Communes of the New German Federal States), notes that this project addresses the incorporation of ethnic minorities, including immigrants & asylum-seekers, within a cultural context fostering tolerance & understanding. The loss of East Germany's cultural identity aggravated the adjustment problems of the dominant ethnic group in accepting minority cultures. ¶ The hypotheses of R. C. Bailey et al ("Hunting and Gathering in the Tropical Rain Forest: Is It Possible?" *American Anthropologist*, 1989, 91, 1, 59-82) & T. N. Headland ("The Wild Yam Question: How Well Could Independent Hunter-Gatherers Live in a Tropical Rainforest Environment?" *Human Ecology*, 1987, 15, 4, 463-491) that human foragers are unable to live in undisturbed tropical rain forests without reliance on cultivated foods are examined. Four conceptual problems arise: (1) assumptions about the relationship between key features of tropical forest ecosystems & human subsistence potential; (2) inconsistencies in the definition of pure foraging; (3) adherence to a dichotomy between foraging & agriculture; & (4) problems in defining the significance of ecotones. Empirical evidence supporting the ability of human hunter-gatherers to live without cultivation in the tropical rainforest environment is provided from a case study of the Penan hunter-gatherers of Borneo. 60 References. ¶ Psychoanalytic interpretations of myth are often rejected because they are seen to be too arbitrary. Alan Dundes has suggested that careful study of allomotifs (analogous but different incidents in different versions of the same myth) can often validate psychoanalytic interpretations ("The Symbolic Equivalence of Allomotifs in the Rabbit-Herd," in *Parsing through Customs: Essays by a Freudian Folklorist*, Madison: U of Wisconsin Press, 1987, 167-177). Here, Dundes's suggestion is used in connection with "Lodge-Boy & Thrown Away," one of the most widespread of all Native American myths. It is suggested that this myth was popular because it gratified male envy of the female capacity to give birth. Careful attention to allomotifs provides evidence in support of two key associations on which this hypothesis depends: an association between the "Open Brains" character who appears in Arapaho versions of the myth & the "swallowing monster" who appears in non-Arapaho versions, & an association between the "swallowing monster" & "uterus." 2 Tables, 31 References. ¶ An overview of the controversy generated by Derek Freeman's *Margaret Mead and Samoa: The Making and Unmaking of an Anthropological Myth* (Cambridge, Mass: Harvard U Press, 1983), particularly the critique of Mead's claim that "coming of age" in 1920s Samoa was accomplished with relative ease. Drawing primarily on literature related to the controversy, supplemented by field research in American & Western Samoa, it is concluded that, while Mead appears to have engaged in some inappropriate generalizations to the rest of Samoa from the small island of Ta'u, Freeman's counterevidence to support his claim that adolescence on Ta'u would have been problematic is weak & easily dismissed. Accordingly, Freeman's claim to have refuted Mead's findings is based on evidence that itself is easily refuted. Thus, Mead's pioneering study, which was the first to argue that the turbulence of adolescence is not universal, continues to stand the test of time. 93 References. Adapted from the source document.

¶ The related phenomena of patronage & protest in the village of Vado de las Chozas in southern Spain are compared at two critical junctures in society–between the state & the local level, & between village groups. Both patronage & protest are used to gain goods & services in preference to official bureaucratic relations, as they are thought to be more attuned to local values & ideology. However, while clients reciprocate benefits received from their patrons with loyalty, protesters explicitly deny the legitimacy of those from whom they want resources. Nevertheless, protest can also help maintain the stability of the social structure by channeling discontent into piecemeal reform rather than a revolutionary break with the past. It is demonstrated how patronage & protest have alternated as the main forms of social interaction in the village over the last 100 years. 47 References. Adapted from the source document. ¶ Social codes are represented in Tunisian nuptial ceremonies & the accompanying ritual feasts. Described is the ritual preparation of the bride, which begins several days before the wedding, involving cosmetic treatments & nutritional regimes intended to accentuate purity, femininity, & womanly features. These rituals express both separation of the bride from her family, & disengagement from any signs of masculinity. Food symbolism during the three-day nuptial celebration, especially the traditional couscous, emphasizes the future contribution of the bride to the couple's fortune, wealth, fecundity, & mutual family-society obligation. Food rites also express the traditional motif of the "nourishing mother." The rites are briefly discussed in the context of rites of passage. I. Prah, Kwesi K., Anthropologists, Colonial Administration, and the Lotuko of Eastern Equatoria, Sudan: 1952-53, *African Journal of Sociology*, 1990, 3, 2, May, 70-86.

¶ The Lotuko of Equatoria (Sudan) had been observed in the nineteenth century by expatriate soldiers & adventurers, but the first significant anthropological works on the Lotuko society date from the early 1900s. In the Sudan of the 1920s & 1930s, colonial administrators relied on information supplied by anthropologists, who were sometimes missionaries. By the 1950s, a large collection of works on the Lotuko society existed, largely built up by missionary anthropologists (MAs). That the MAs were much closer to the native society than were the administrators created an ambivalent attitude in the administrators toward this group. The dynamics of the relationship between administrators, MAs, other anthropologists, & natives in the hinterlands of the British Empire are illustrated by a case study of reports on the 1953 *nefira* ceremony (the last of the three rites of passage) of the Lotuko of Lowdo. ¶ Concerning the current debate on whether human subsistence based soley on foraging is possible in tropical rain forests without agricultural subsidies, it is argued that changing perspectives on ecological patterns & processes in rain forests & the significant variation among forests on a worldwide as well as regional scale must be taken into consideration. Human disturbance is also proposed as a cause of dependence on agriculture by modern human foragers. These issues are discussed against the background of a case study of the Yuquí, who, until very recently, were true foragers in the Bolivian Amazon. For the Yuquí, the sustainability of their subsistence system depended on a fine-grained knowledge of their environment & freedom of movement over a large territory. 51 References. ¶ Infibulation ("Pharonic circumcision"), is the most drastic form of female (F) circumcision. Its rationale & consequences are explored here, focusing on the case of Somalia, where at least 87% of Fs are infibulated at age 7 or 8. Contrasting points of view are identified in attitudes towards F circumcision, eg, while it increases Fs' value in Somalia, it often degrades them in the eyes of the outside world. It is argued that the incidence of the practice should be reduced or abolished & that policies directed toward this aim should be an integral part of other development policies. Since their gender identity is at stake, Fs should be actively involved in formulating & implementing the necessary policies. Adapted from the source document. ¶ Any study dedicated to time flexibility in the Italian system of industrial relations should note the paucity of information on this subject in the literature. In the 1980s, part-time work & flexible hours were introduced as elements diversifying the previously rigid work schedule model. Flexible scheduling is a strategy employed by many firms to deal with the vicissitudes of the markets. A law enacted in 1974 provided that part-time labor be compensated by a 10% bonus & that no more than 20% of a company's employees could be part-time employees. Also discussed are overtime hours & such arrangements as six-hours days & six-day work weeks. Employer surveys in the 1960s reflected a more deductive human capital perspective. By the 1980s, researchers began to study more macroeconomic factors in firms & industries when analyzing employer surveys. In the future, employer surveys need to focus on questions that cannot be adequately addressed by more conventional supply-side techniques. ¶ Data from the 1968 & 1981 Level of Living Surveys (N = 3,464 & 2,935 respondents, respectively), are drawn on to investigate how the rising labor force participation of wives (Ws) in Sweden during the 1970s affected family income distribution. Using the squared coefficient of variation to compare the dispersion of family (factor) income with the dispersion of husbands' (Hs') income reveals an equalizing effect of Ws' income, in the sense that family income is more equal than Hs' income. Furthermore, the equalizing effect of Ws' income was stronger in 1980 than in 1967, ie, when their labor force participation had increased markedly. Further examination suggests that the equalizing effects stem from wage rates rather than from hours of work. This effect holds in spite of very strong positive correlation between Hs' & Ws' education. 6 Tables, 1 Figure, 11 References. Adapted from the source document.

Boylan, Ross D., Structure in External Labor Markets, *Research in Social Stratification and Mobility*, 1992, 11, 97-125.

¶ The effect of jobs on individual mobility & income, & the extent to which external labor markets have a neoclassical structure were investigated using occupational & income data from the 1966-1971 & 1975/76 National Longitudinal Surveys of Young Men. Specifically, the positions of 5,225 men, ages 14-24 in 1966, were classified as to their degree of internal or external advantage. The structure of the external market was hypothesized to be analogous to that of the internal market, but external advantage accrued where the position helped incumbents to move to a more desirable position, conferred transferable skills or credentials, provided contacts, or provided a signal of one's abilities to other employers. Regression analyses supported the non-neoclassical model holding that: advantage raises income, external advantage raises income in moves between employers, internal advantage raises incomes for those who stay with a single employer, the difference between stayers' & movers' incomes are greatest for those in positions with only an internal advantage, & positions with external advantage show higher levels of income & income [illegible]th over a career than those with only internal advantage. ¶ The impact of maternal motivations for employment on college students' perceptions of their wroking mothers is investigated, drawing on experimental data from 168 upper-division students (primarily Caucasian & lower middle-class) at a state university in New England. Analyses of variance showed that vignettes depicting an employed vs a nonemployed mother of an infant received lower communality & approval ratings. In addition, the devaluation of the employed mother's communality was greater when she had a fulfillment rather than a financial motive. Findings are discussed in the context of A. H. ¶ In 1987, 11% of all workers in Calif, & 50% of teenagers, earned less than what was to become the new state minimum wage in 1988, $4.25/hour. Here, data from the 1987 Current Population Survey (N = approximately 20,000 working-age respondents) & other published sources are used to compare changes in the labor market outcomes of Calif workers to those in states with no increase in the minimum wage. Analysis indicates that the minimum wage increase raised the earnings of low-wage workers by 5%-10%. Contrary to conventional predictions, however, there was no decline in teenage employment, or any relative loss of jobs in retail trade. 6 Tables, 4 Figures, 1 Appendix, 20 References. ¶ The effects of the 1989 fall of dictator Alfredo Stroessner in Paraguay on labor relations are considered. Under Stroessner, both collective & individual labor relations were under tight state control, including laws on work hours & minimum wage. State unions existed, but were controlled by the government; membership in independent unions was minimal due to government repression. In addition, employers who did not comply with labor laws were not punished. The writers of the new constitution accept the right of unions & strikes, even on the part of public workers, but powerful groups have waged a public relations campaign against greater rights for workers. 27 References. ¶ Drawing on data from the 1983 & 1987 Current Population Surveys (N = 12,919 full-time workers), supplemented by other statistics on employment & business organizations, a model is developed to explain how the size of organizational labor markets & the instability resulting from industry expansion, contraction, & equity reorganization influenced rates of internal mobility, external mobility, & unemployment during the industrial restructuring of the 1980s. Analysis indicates that structural change has predictable effects on job mobility & that labor market structure channels mobility in predictable ways. However, the ability of labor market structure to buffer environmental turbulence was limited during the turbulent 1980s, & the "flexible" character of US labor markets had important consequences for blue-collar & service workers. 4 Tables, 1 Figure, 1 Appendix, 63 References. ¶ Debate regarding gender-based occupational segregation has been dominated by the view that segregation results from differences in the occupational choices made by men & women. An alternative test using the occupational choice explanation is presented, drawing on data derived from the 1967 National Longitudinal Survey for Mature Women, ages 30-44, to examine the human capital propositions that predominantly female (F) occupations are characterized by relatively higher starting wages & lower penalties for time spent out of the labor market. An examination of average hourly wage rates by level of work experience failed to indicate statistically significant starting wage differentials that would explain occupational segregation based on choice. Aggression analyses show that predominantly F occupations offer significantly lower starting wages & higher penalty rates relative to predominantly male occupations. Economic incentives suggested by human capital theory that would lead Fs to choose to work in traditionally F occupations are not found. It is suggested that future research should explore the roles of labor market discrimination & gender-role socialization in explaining occupational segregation. 3 Tables, 2 Figures. ¶ A test of the hypothesis that, within the new international division of labor, women are employed in low-wage jobs because their attitudes & worldviews lead them to accept these positions compliantly, based on survey data from 124 female (F) *maquiladora* (export-processing plant) & 70 service workers in Mexicali, Mexico. These Fs expressed a high degree of personal autonomy, positive attitudes toward gender equality, a fairly high level of political involvement, & close attention to family roles, contradicting the view of Fs as espousing a patriarchal social view. The social sources of these attitudes & worldviews were examined using multivariate statistics to test hypotheses from developmental, class analytic, & feminist theories. Each perspective was useful in addressing

sources of variation in worldviews. In general, Fs with nontraditional worldviews had higher levels of education & were employed in less patriarchal modern factories. Global economic dynamics & world-level cultural processes may have generated these nontraditional worldviews by creating opportunities for Fs in export-led industries & by expanding education & media exposure. 4 Tables, 1 Figure, 1 Appendix, 65 References. ¶ The multinational microelectronic corporation Sgs-Thomson was formed in 1987 through the merger of the French company Thomson Semiconducteurs & the Italian company Sgs Microelettronica. By 1989, Sgs-Thomson was the twelfth largest producer of computer chips in the world & the second largest in Europe. Interview data collected 1988-1990 from workers & managers (N not specified) are used to compare the labor force & working conditions at a site near Milan, Italy, with one near Aix-en-Provence, France. In general, the French site has a younger workforce, both in terms of chronological age & years of work experience, & is characterized by a greater degree of flexibility in work schedules, allowing morning, afternoon, & weekend shifts. In Italy, the labor unions pursue a more antagonistic role & the work is organized around alternate on/off shifts of seven-day duration. 3 Tables. M. Meeks

¶ Arguing that strikes should be viewed primarily as expressions of worker discontent rather than a result of imperfect or asymmetrical information, a collective voice approach is utilized to investigate the behavioral determinants of variation in strike activity at the organizational level. Analysis of 1980/81 mail survey data collected from 112 Canadian firms indicates that managerial practices, operations size & technology, product market structure & conditions, union politics, & various other factors that influence the behavioral context of negotiations are significantly related to days lost due to strike activity. These findings are generally consistent with the collective voice approach. 2 Tables, 43 References. Adapted from the source document.

¶ If working-class protests in nineteenth-century France relied on close-knit networks & corporate solidarity of artisanal trades, as sociologists & historians have generally agreed, it is less clear how to explain cross-trade alliances during urban uprisings. While some scholars have suggested that the mobilization of workers from a broad range of trades in the 1871 Paris Commune uprising represented growing class consciousness, analysis of archival data on rank-&-file insurgents reveal that workers from close-knit occupational groups actually participated in the Commune at lower rates than those in weakly organized trades, & mobilization for insurgency was a function of neighborhood networks, not craft group membership. Therefore, it was not fomenting class consciousness that accounted for the disappearance of trade boundaries during the Commune, but rather, a shift from trade to neighborhood in the locus of social organization. 5 Tables, 64 References. ¶ The study of workers's time management is an instrument for analyzing changes in salary structure. Attention is focused on the work schedules of cashiers in large department stores in Italy & France. Schedule flexibility can be viewed as a management tool. Part-time employment is more widespread here than in many other sectors of the economy. High worker turnover tends to be a big problem. Special attention is given to the French system of worker pools, whereby workers are given the chance to increase or decrease the number of hours they work each week as long as they maintain a minimum balance of hours & as long as the pool can satisfy the company's labor needs. Advantages of the pool system & of workers' self-management of scheduling are reviewed. 17 References. M. Meeks

¶ Cross-national quantitative data collected 1960-1980 in 71 countries are drawn on to explore women's subordinate economic status within the context of the world-system, focusing on how processes of the new international division of labor & consequent underdevelopment affect occupational sex segregation (OSS). Panel regression analyses reveal that world-system position & economic development have important consequences for OSS. However, an unexpected negative relationship for multinational corporation dependency is also revealed that is stronger for the longer term than the shorter term. Of the intervening variables, female (F) labor force participation has a negative effect, F share of the service sector has a strong positive effect, & fertility has no significant effects on OSS. 2 Tables, 72 References. ¶ Questionnaire data from Ss in the Aboriginal, Anglo-Saxon, Chinese, & Lebanese Australian cultural communities (N = 30 each group) are drawn on to explore the influence of ethnic cultural background & multicultural interaction on the structure of individual work cognitions. The rank-ordering patterns of cultural goals, personal goals, & work values were positively correlated within each cultural group. Multidimensional unfolding revealed that not only did the structure of achievement goals & work values vary between the 4 groups, but that in environments where cultural groups interacted, cognitive transition was found among individuals of minority ethnic groups who moved away from ethnic work norms, & moved toward work norms of the dominant cultural group. The variations in work cognition structures are explained in terms of the culture-specific achievement structure, which effectively accounts for the dynamic of culture & cultural interaction at both the group & individual levels of cognitive functioning. 3 Tables, 7 Figures, 31 References. Analysis indicates that the type of support structure that a refugee can access, the number of dependents in a household, & a refugee's chronological age, sex, ability to read & write English, & area of origin all have a significant impact on employment retention possibilities. Background characteristics & exposure to US assistance organizations also influenced refugees' labor force participation patterns. 4 Tables, 42 References. E. ¶ An overview of earlier research on ethnic minority employment & equal opportunities issues in GB focuses on implications of the findings for equal opportunities of major changes in business organization & employment practice that began in the 1980s. Several trends are identified, both of potential benefit & threat to equal opportunities, that characterize the early 1990s. It is concluded that future developments should focus on the enhanced conceptions of citizenship currently being propounded by the major political parties. 20 References. ¶ Because overall female (F) employment does not consistently lead to declining fertility at the individual & social levels, it is argued that researchers must begin to examine how employment patterns among specific subgroups of Fs impact fertility. To that end, the specific conditions under which F employment lowers fertility are explored. Correlating total pregnancies reported in the 1975/76 Bangladesh Fertility Survey with women's work status, types of work (modern, mixed, transitional, & traditional), age, residence, education (of wife & husband), religion, & family planning practices reveals that modern & traditional employment, as well as higher & secondary education, are closely associated with lower fertility, although age, religion, & family planning are also significant factors. The policy implications of these findings for developing countries are discussed. 1 Table, 29 References. M. Maguire (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

¶ A discussion of the categorization in Paraguay of elementary schoo teaching as woman's work, focusing on the confluence of political, eco nomic, & ideological reasons. While some suggest that low pay & th need for a disposable work force are the underlying causes behind th preponderance of women in this occupation, it is argued here that wome entered the field in the early twentieth century in response to a nationa push toward universal education that would instill the values of citizen ship. Reasons why female elementary school teachers today are seen "educating mothers" or caretakers of children rather than as professio als are explored. The paradoxes inherent in the work of female vs mal school teachers are also examined & tied to the overall social conditio of women. 29 References. J. A., Van Aken, C. G. (Eds), *Women and the Scientific Professions*. Ca bridge: MIT Press, 1965) revealed seven possible reasons. In this repli tion, using the same National Opinion Research Center instrument survey 283 male (M) & F students at universities in Tex, Okla, & M 10 possible choices are noted. While the fact that a career in science engineering may be too demanding to combine with family responsi ties is perceived as a major barrier in both time periods, an additio reason emerged in the present study, ie, Ms resent F colleagues. If situation is to change, universities will have to accommodate the ne of F researchers & their families. ¶ Statistical data for 1980 & 1990 are presented to analyze the major changes in workforce organization introduced by GB & German steel producers in the context of retrenchment in the industry, new product development, & technological change. Including multiskilling, a reduction in demarcation, & team-working, these changes have had a major effect on workforce composition & on the nature of work undertaken at the shopfloor level. While these changes have had a common broad trajectory, they have been introduced at a different pace & in different forms. Inter- & intranational contrasts between plants are provided, & the response of trade unions to them is discussed; implications for industrial relations at the shopfloor level are assessed. 2 Tables, 31 References. ¶ The socioeconomic background, work life, & marriage & family life of women construction workers (WCWs) was examined through interviews with 35 WCWs in Kodaikanal, India. WCWs tended to be Hindu, members of scheduled or backward castes, under age 35, illiterate, married, & living in poverty. Poverty & illiteracy were the primary reasons for entering the construction trade. The majority of WCWs had little training & were recruited as casual laborers. Their work was very strenuous, but they received only minimum wage & were discriminated against in manner of payment. Their work was also considered supplemental, & few of them joined any trade organizations. Their marriages tended to be prearranged, & they lived without basic amenities. They were undernourished & often abused & exploited by their husbands. 1 Appendix, 13 References. D Generoli

¶ Interemployer variations in pay structures were investigated via mail surveys of 1,650 employers in Ontario, who reported average employee pay levels in 13 occupational categories, analyzed by gender & full-/part-time status. Principal components analysis, using industrial segmentation (private-public), employer size, unionization, & sex & occupational composition variables, showed that overall pay was the highest among employers in the core market segments, next highest for state employers, & lowest for periphery employers. The pay range was greater among large employers, & managers working for large & middle-sized firms had pay advantages over those in smaller firms. Unionization had only a modest positive effect on pay, while the presence of female employees was negatively related to pay. Occupational composition (manual, nonmanual, & managerial/professional) had a strong effect on overall pay level, with overall pay somewhat higher in firms with more managers & professionals, when other employer variables were held constant. The research underscored that employer effects on pay levels were not reducible to a small set of variables. 4 Tables, 1 Appendix, 27 References. Adapted from the source document.

Orwa, Katete, **The Impact of Capitalist Modes of Production on Peasant Modes of Production: An Overview of Grain Production on Rusinga Island**, *African Journal of Sociology*, 1990, 3, 2, May, 26-43.

¶ Within its capitalist mode, Kenyan food policy assumes that all peasants have advanced beyond subsistence production & that they are able to purchase food grains when grain is availabe. A study of peasants on Rusinga Island in Lake Victoria 1960-1980 shows that these assumptions are faulty, & that food policy has not taken cultural norms associated with production into consideration. Precolonial peasant production on Rusinga revolved around family agricultural production. Three types of land-crop fields were worked & owned according to social position & a sexual division of labor. The introduction of a capitalist mode of production crowded out these traditional systems of production, but, coupled with population growth, did not produce enough wealth for self-sufficiency. Young men spend time fishing & women spend time trading in fish, while the land is left unworked. This situation has brought the local population into a state of famine & pauperization. 5 Tables, 37 References. Adapted from the source document.

Analysis reveals that the established pattern of ethnic group advantage & disadvantage was largely maintained during the 1980s. Unemployment & economic inactivity among ethnic minorities grew as the increase in the numbers employed failed to keep pace with the growing numbers in the economically active age groups. Minorities from Pakistan, Bangladesh, & West India fared particularly badly, while the Chinese & Indians experienced more favorable trends. 14 Tables, 2 Figures, 15 References. ¶ Recent changes in the Western European labor market have substantially affected patterns in the early stages of working life. A literature review shows that the old economic theories of interpreting early work patterns are outdated; also, too many researchers view youth as a homogeneous group, leading to overly generalized conclusions. This error can be observed in structuralist theories about the inapplicability of education to the job market or in the opinions of others that young people do not really wish to work. An alternative approach is suggested, holding that the varying reactions of young people to the changing labor market & structural unemployment are closely connected to socioeconomic transformations & the emergence of new ways of life. This approach points out a relationship between the precariousness of employment status & increased lifestyle flexibility, including intermittent work, living alone, & cohabitation. 1 Figure. M. ¶ Statistical data indicate that during the 1980s, trade union membership in most OECD (Organization for Economic Cooperation & Development) countries declined. Developed here is an explanatory framework for that decline, focusing on the case of Australia. Factors considered include: the shift from manufacturing to services, the growth of parttime labor, the decline of workplaces employing large groups of workers, structural changes in the composition of the labor force, & the decline of corporatist relationships. The antidote to this decline is to establish an institutionalized presence at the workplace & at the national level to maintain union density. In Australia, the maintenance of close relation-

ships with the government has not been sufficient to arrest union decline, raising doubts for other countries who view the election of sympathetic governments as a solution to declining unionism. 4 Tables, 74 References. Adapted from the source document.

¶ To investigate trends in Italian retail sales, interview data were obtained from 90 workers at 3 supermarkets & 1 department store. Since the ealy 1980s, the Italian retail system has undergone considerable changes not readily apparent to the causal observer. Employment in retail positions has risen to nearly 3 million. Some economists view this as an expansion of the tertiary sector in the postindustrial economy, while others see dangers in the overconcentration of labor in essentially nonproductive activities. Comparative analysis show that the percentage of Italians employed in retail sales does not vary significantly from the percentage in other advanced Western European nations. Special attention is given to the recent emergence of supermarkets & department stores, where Italy still lags far behind. Also discussed are personnel policies, the organization of work hours, the position of part-time employees, & flexible scheduling. 2 Tables, 8 References. M. Meeks

¶ Personnel records of 333 white & 158 ethnic minority workers in GB employed in 9 occupational groups are drawn on to evaluate the adverse occupational distribution & earnings of ethnic minorities as a function of direct & indirect discrimination, controlling for differences in human capital. Estimates are deduced of proportional wage differentials in various job markets for ethnic minority & white male workers of similar personal & human capital characteristics performing similar job tasks. Analysis reveals that, controlling for education, training, & length of service, ethnic minority workers tend to be on lower salary &, more precisely, lower grades than their white counterparts. It is argued that G. S. Becker (*The Economics of Discrimination of Income: An Analytic Approach*, Mich: Michigan Press, 1957) has underestimated the forces of discrimination by explaining differential wages & salaries purely in terms of the operation of the labor market. 5 Tables, 18 References. ¶ To investigate how long-term unemployment affects workers, interview data were obtained from former employees (N = 213) & their spouses 1 year after the closing of a mid-sized Austrian factory, & again a year later. By interviewing spouses separately, it was noted that unemployed men tended to dwell on their identity as it was while they were still employed, while providing less information about their current state of employment; in contrast, women could often fill in the missing information about their husbands' unemployment status. Special attention is given to coping strategies, financial restrictions, use of time, social life, & marital relationship. Social psychological works on unemployment would do better by avoiding the concept of victimization; rather, research should concentrate on the creativity of the job search & on alternatives to the type of job previously held. 14 References. It is contended here, however, that fundamental changes in wages, jobs, & future opportunities in the labor market since 1980 have had negative effects on these youths' school outcomes & motivation & discipline as new workers. Based on a literature review & a case study, it is suggested that economic changes have played a major role in shaping the current "educational crisis." 148 References. ¶ In response to recent challenges to the long-prevailing notion that free women held unusually high economic status in colonial America, tested here is the corresponding notion that the nineteenth century afforded women fewer occupational opportunities, with a resulting loss in freedom & status. Analysis of 10,167 sex-identifiable business announcements & advertisements in a large sample of newspapers, 1800-1849, reveals the distribution of occupational pursuits & changes in this distribution over time. Results are also compared to those from an earlier study of the eighteenth century (Dexter, Elizabeth Anthony, *Colonial Women of Affairs*, New York: Houghton Mifflin, 1924). ¶ Reasons for the fact that females (Fs) working in the US private sector are less likely than males (Ms) to be union members are investigated. Data from a 1984 national telephone poll (N = 671 Fs & 778 Ms) indicate that Fs are equally as interested as Ms in joining unions, but face gender barriers. In particular, nonunion Fs in private-sector, white-collar jobs (representing 50+% of the F nonunion work force) expressed more

interest than did comparable Ms in joining unions. This finding appears to reflect more optimism among the Fs in this group about what unions can accomplish; it is not explained by gender differences in attitudes toward jobs or employers. The notion that family responsibilities or other concerns of F workers that differentiate them from Ms present special barriers to unionization is discounted. 4 Tables, 29 References. ¶ The notion that the labor market rations job opportunities suggests that while there is great individual motivation for job changing, many jobs are unavailable. For growth industries to expand smoothly in the economy, institutions redirect trends toward equilibrium in the labor market & ration positions. When the economy experiences an oversupply of labor, unrationed jobs permit the worker to move laterally & eventually secure a more attractive rationed position. It is suggested that the products market, not the labor market, is the source of retarded economic development. Applied to Norway's rural areas, this perspective suggests that a reversal of economic policies favoring product markets in these areas will neither increase employment, nor benefit other sectors of the economy. 35 References. ¶ It is argued that Roger Clark's rejection of the discrimination hypothesis (see SA 39:4/91X8921)–which maintains that an increase in female (F) labor force participation results in greater gender-linked occupational differentiation–is unwarranted due to basic methodological & conceptual flaws in his analysis. Clark is taken to task for using % F in the labor force to predict the ratio of men to Fs in high-status occupations, & for misinterpreting the effect of F share in the labor force on gender-linked occupational differentiation. In **Measure for Measure: Women's Relative Access to Prestigious Occupations Revisited,** Clark (Rhode Island Coll, Providence) defends his methodology, challenges Semyonov's claim that lagged regression models are inadequate, & dispels further the discrimination hypothesis. 9 References. ¶ Sexual harassment & discrimination are widespread in the workplace, academia, & medicine, & have serious economic, psychiatric, & stress-related health consequences. The vast majority of victims are women. Sexual discrimination in the workplace is manifested by differential hiring, work assignments, salaries, promotions, & other conditions of work based on sex, including exclusion from social & peer networks in which business occurs, information is shared, or decisions are made. Sexual harassment is a specific type of sexual discrimination that ranges from unwelcome sexual advances, requests & pressure for sexual favors, & other verbal or physical conduct of a sexual nature adversely affecting the work environment. Here, topics discussed include: the prevalence of physical & emotional symptoms & syndromes, appropriate interventions by health & mental health care providers, options available to victims, & the potential hazards associated with exercising these options. ¶ The Norwegian social science tradition of action research (AR), based on pioneering field studies in the early 1960s by Einar Thorsrud, is described & evaluated. Originally intended to study & improve work environment & organization by introducing democratic reforms & a more active worker role, it now focuses on participatory AR, in which the worker has a part in implementing changes in the workplace. AR directly resulted in the 1977 work environment law, & was influential in regulating the oil & shipping industries. Aiming for a certain ethical & philosophical perspective, & a change-oriented practical policy outcome, AR is less concerned with informing related social science issues. It also does not consider the effectiveness of techniques for change or the long-term implications of organizational change. In **Aksjonsforskning: En nyttig vitenskap?** (Action Research: A Useful Science?), Øyvind Pålshaugen suggests that Sørensen's analysis is a result of overcomplacency within the traditional social research paradigm. Detailing main elements of a particular AR strategy & corresponding rationales, it is shown that Sørensen's reading of the action research literature is shortsighted & inaccurate. 17 References. Findings document changes in the market position of Puerto Rican women since 1960; conditions that ultimately led to their reduced participation during a period of substantial increase in market activity of other women are considered. Results show widening race & ethnic differentials in employment states over time & unequal employment returns to education among women of color. Industrial restructuring, the influx of unskilled immigrants from Latin America, & changing economic cycles are possible mechanisms responsible for the declining labor market position of minority women; however, discrimination also is implicated in the unequal employment outcomes among equally qualified workers. 4 Tables, 3 Appendixes, 43 References. ¶ Census data from Statistics Canada for 1971 & 1981 are drawn on to investigate the relationship between female (F) labor force participation & the odds of suicide for both Fs & males (Ms), focusing on the effects of cultural conditions. Results provide support for both hypotheses tested: (1) in 1971, the effects of married F labor force participation increased suicide risk for both Ms & Fs due to the relative antipathy of society toward such participation; & (2) in 1981, the effects of married F labor force participation decreased the risk of suicide for both sexes as a consequence of net positive gains (psychic & material) in a context of widespread acceptance of such involvement by Fs in the paid economy. 2 Tables, 1 Appendix, 50 References. ¶ Stigmatization & stereotyping prevent certain people from finding employment, especially during difficult economic times. These hard-core unemployed often include returning women, immigrants, school leavers, & people age 40+. In an examination of the Job Opportunities Project in Helmond, Netherlands, in the 1980s, 352 of 530 difficult-to-place job-seekers found employment within the 3-year duration of the project. The success of the program was attributed to the development of a job mediation system, networking, & a wage subsidy scheme for employers. The results suggest that employment offices set up special project groups primarily to mediate for the hard-core unemployed. 4 Tables, 1 Figure, 15 References. Adapted from the source document. ¶ Explanations of women's intermittent employment often focus on the difficulty of combining family & labor market work. Here, survey data from Wash women who were high school juniors & seniors in 1965/66 & provided work histories up to 1979 (follow-up N = 5,849) reveal that the majority of employment interruptions were for reasons other than family responsibilities. Periods of nonemployment for family/child care reasons were longer than those for other reasons, but net of length were no more likely to result in downward income mobility on return to employment. For all periods of nonemployment, family characteristics, eg, being married & having preschool children, slowed the rate of return to employment; human resources, eg, higher education, increased the rate of return. Controlling for the reason for leaving, the amount of time out of the labor market increased the chance of both lower & higher wages on return to employment. 5 Tables, 62 References. ¶ Findings are reported from a longitudinal study of Australian school leavers (N = 78 young adults who had been interviewed since 1980), in which emotional reactions to unemployment were examined in relation to the reasons given for being unemployed. Young people who had left full-time jobs through dismissal were no worse off than those who h left for other reasons. However, those who gave external, vs intern causal attributions for their unemployment displayed higher self-estee & less hopelessness. On the other hand, the stability of causal attrit tions was not associated with hopelessness. Results are discussed in re tion to B. ¶ Explored are alternative accounts of the relationship between uni membership & perceived powerlessness found in the Marxist, mass soc ety, organizational, & social movements literatures. Distinctions amor them are illustrated using data from a 1980 household survey of text production workers in a NC mill town. Logistic & ordinary least squar regression analyses suggest that: (1) union membership influences pe ceived powerlessness by providing members a responsive organizati that contrasts with their lack of control in the workplace; & (2) perceive powerlessness, when combined with endorsement of collective strategi for change, encourages union membership. In the southern textile cas race is associated with specific ideological leanings regarding collecti strategies. ¶ In a survey of contemporary examples of US defense conversion--ie, the planned transformation of defense production to civilian purposes--an examination of two instances of site conversion, which is the attempt to convert specific defense plants to civilian manufacturing, is followed by consideration of an alternative approach: diversification that seeks to reduce the defense dependency of a region through various forms of economic development rather than through actual site conversion. The diversification examples presented have all included broad democratic participation & are indicative of the citizen participation that can take place in industrial planning. The future of site conversion & diversification is discussed, & an attempt is made to place them in the context of the need for a national industrial policy. 1 Appendix, 12 References. ¶ For many years, the military could be characterized as an all-male society. Only recently have women begun to invade the sanctuary where the cult of masculinity is celebrated. Many types of cultural resistance confound women's attempts to meet with the men on the battlefront. The Persian Gulf war involved about 32,500 women, ie, 6% of the US fighting force, compared with the 11% overall share of the US armed forces made up by women. During the war, women worked as radar operators on combat flights, jeep & truck drivers, health professionals in chemical decontamination & hospital units, & helicopter pilots in rescue missions. However, they remain barred from most combat roles, hindering their chances for promotion. Special attention is given to the coverage of the women by the US media, leading some to term Operation Desert Storm as the "Moms' War." 67 References. M. ¶ Classic sociological analyses offered by C. Wright Mills, John Galbraith, Seymour Melman, & E. P. Thompson are drawn on to theorize the institutional foundations of war making, eg, the state's civilian & military institutions, as well as geopolitical, technological, & political-economic factors. This theory is employed to analyze US war making in three periods: ascent to hegemony (1939-1945), era of hegemony (1946-1970), & military leadership despite economic decline (1971-present). The analysis highlights changes in the social resources required for war making as military technologies & state structures that influence defense budgeting change over time. Conclusions shed light on the origins & contradiction of the US emphasis on strategic nuclear forces; while this permitted the US to exercise hegemony, it also left the US vulnerable to defeat in conventional war in the Third World. Despite the contradictions intrinsic to its strategic posture, the US has been able to maintain military leadership despite its relative economic decline, & it is likely that US military leadership will persist in the future. 1 Table, 3 Figures. ¶ Arguing that during the 1980s, US foreign policy initiated a gradual & covert militarization of the drug war in Bolivia despite popular opposition, examined is the official policy of militarization of narcotics control & enforcement after the May 1990 US-Bolivian Anti-Narcotics Agreement. Descriptive historical material & analytical data, drawn largely from the Bolivian press & secondary sources, support the conclusion that the current policy is both wrong-headed & failing. Militarization of the Bolivian coca problem means not only increasing economic hardship, repression, & radicalization of the peasantry, but also further corruption of the military, historically part of the drug problem rather than its solution. Because of wide-scale political opposition, militarization may also destabilize Bolivia's hard-won return to democracy & ensure its continued economic & diplomatic dependence on the increasing outlays of narcotics-related assistance from the US. In the end, militarization of the drug war in Bolivia is intended to meet the needs of domestic US politics & not those of Bolivia or of the Andean region. Unfortunately, this Andean "drug war on the cheap," so reliant on low-intensity conflict strategy & counterinsurgency maneuvers, may ultimately promote the "Honduranization" of Bolivia. 1 Table. Wirtz, Theresa (U Maryland, College Park 20742), **The Role of Death in War**, *Peace Review*, 1992, 4, 3, fall, 10-13.

¶ The use of human mortality for strategic & political advantage in war is examined. Advances in technology, by simultaneously increasing the killing capacity of war systems & the capacity of systems to absorb death, have altered the role of death in political discourse & strategies of warfare. The goal of war has become the erosion of an opponent's sur-

plus death–reaching the point where the enemy can no longer absorb death & still wage war. At surplus death, continuing loss of life becomes the opponent's moral responsibility. However, the inability of smaller nations or groups to match technology with greater powers has prompted the recent emergence of terrorism & guerrilla warfare & is giving death a new meaning. Death by terrorism is coming to symbolize the inability of the state to protect the public & provide stability, thus undermining the state's legitimacy. D. ¶ Consensus, co-involvement, & worker participation are currently in vogue in the managerial lexicon of recent years. In contrast, the times when it was fashionable to speak about automated production leading to workerless factories seem rather remote. After the passive acquiescence of the economic growth of the 1960s & the social peace invoked during the 1970s, the 1980s saw an emphasis on valuing human resources as a key strategy of efficient & competitive businesses. In the US the absence of legislation & policy favorable to innovation in the field of labor relations has slowed the spread of changes & led to the marginalization of labor unions. In France, by contrast, the government advocates "negotiated modernization" as a way to allocate human resources, with decisions made through social dialogue with the participation of "reformist" unions. Many of the recent changes were induced by the highly competitive international economy & the need to become more efficient. 37 References. M. ¶ The new managerial style calling for nearly total involvement of staff, both physically & psychologically, in the company's functioning is examined. "Psychological" management maximizes the inherent potential within organizations to meet more than material & economic needs. The mutually beneficial relationship between workers & directors builds on the symbolic & social values of work. Increasing competition in business caused such a system to develop, although its economic effectiveness is questionable. Apparently leading to psychological & physical strains, the propagandizing call for employees to produce greater amounts with more efficiency may be counterproductive in the long run. 15 References. ¶ In the 1980s European businesses were confronted by the industrial might of Japan, largely built on harmonious labor relations & organizational genius. The challenges resulting from Japanese competition led to a change from the conflictual labor relations models of the 1960s & 1970s to an emphasis on consensus as a key component in running a successful business. The assimilation model of consensus stresses adhesion to common values, a sense of common belonging, loyalty, & solidarity. In contrast, the composition model of consensus is based on the negotiation of rules & procedures, explicitly recognizing differences between various social groups. It is shown that consensus may best be viewed as a by-product achieved through a special type of agreement based more on accepted rules than on shared values. Such a consensus is useful in foreseeing the future course of the firm & in stabilizing the conditions of interactions among social actors. 15 References. M. As our society becomes increasingly multilingual & culturally diverse, translation takes on more importance. Translation is examined in terms of its influence on organizational members' sensemaking & the consequent social & ta[illegible]tions of the institution. ¶ In organizations, the successful interpersonal communication management of sexual harassment strategically incorporates messages with conflicting multiple goals that empower the victim. However, achieving reconcilable goals relevant in the workplace may be constrained by low social & organizational power of women, the culturally insensitive organizational culture, & intentional ambiguities. Verbal replies to harassment framed by concepts from the theoretical orientations of assertiveness, intraorganizational influence, & message design logics are suggested. The literature from each provides a number of strategies that must be individually assessed for effectiveness. It is noted that although some situations may be handled successfully with appropriate communication, using messages to stop the offensive behavior may be difficult. Easily accessed support built on educational & sensitization programs within the organization will benefit resolution of cases of harassment. 1 Table, 79 References. ¶ An attempt is made to determine to what extent the model given in M. Burawoy's *Manufacturing Consent* (Chicago: U of Chicago Press, 1979) is applicable to worker consensus observable in Fiat Auto (Italy). Burawoy postulates three factors necessary in the political consensus of mass production under a monopolistic-capitalistic regime: (1) workers' agreement to maintain a certain pace of production; (2) the development of an internal labor market consistent with the goals of the stockholders; & (3) the development of an internal state within the company, with rules & procedures for dealing with conflicts. A disadvantage of this model is its applicability only to workers directly linked to production; moreover, the model does not account for differences in worker skill levels. Analysis of changes in personnel policy from the 1970s to the 1980s reveals a movement away from a worker-client labor model to a worker-citizen model. 21 References. M. Meeks

¶ A generic framework for understanding institutional sustainability in development is presented, drawing lessons from the agriculture & health sectors. The framework treats institutions as: (1) systems that function in relationship to their environments; (2) organized & managed entities whose organizational structures & procedures must match the tasks, products, people, resources, & contexts they deal with; & (3) settings intimately concerned with the exchange of resources where economic & political relationships intertwine to create varying patterns of power & incentive. Application of the analytic framework shows that the sustainability of development institutions depends on maintaining: responsive output flows (high quality & valued goods & services); cost-effective goods & services delivery mechanisms (organization & management); & resource flows (recurrent costs, capital investments, & human resources). 2 Tables, 77 References. A new model of group development shows that groups do not do their work by advancing gradually through stages; rather, they move forward in a pattern of punctuated equilibrium, making shifts at certain midpoints & changing the pace of their work. tion Theory and the Market for Corporate Control: A Dynamic Analysis of the Characteristics of Large Takeover Targets, 1980-1990, *Administrative Science Quarterly,* 1992, 37, 4, Dec, 605-633.

¶ Factors contributing to the vulnerability of corporations to takeover are examined through analysis of time series data covering all takeover bids for *Fortune* 500 firms, 1980-1990. *Greater organizational slack,* age, & having a finance chief executive officer were related to higher risk of corporate takeover. Family control & financial characteristics (eg, a higher market-to-book ratio) were associated *with lower risk. Bank con*trol & intercorporate network ties had no apparent effect on risk of takeover. Organizations that were most successful by the standards of organization theory appeared more likely to be vulnerable to corporate takeover. 3 Tables, 1 Figure, 63 References. (*An Italian-language version of an article orginally published as* "The Japanese Organization. Its Influence on Management and Industrial Relations in Western Europe," *International Quarterly for Asian Studies,* 1989, 20, 1-2, May, 73-94.) Referring to J. W. Meyer's/B. Rowans's concept (see SA 26:1/78J0474) of isomorphy between organizational & societal structures, the prospects of introducing Japanese management concepts into industrial relations in Western Europe, focusing on the examples of GB & Germany, are discussed. The characteristics of Japanese management are seen in a particular pattern of social relations that combines trustful "generalized exchange" with unequal power. Referring to recent empirical research, it is examined how far that pattern fits into the institutional frameworks of GB & Germany. This balance is concluded to be negative for both countries in spite of the formal adoption of certain Japanese management techniques. 39 References. Prior to its reorganization, the University Hospital of Tromso, Norway, was the subject of an experimental management by objectives (MBO) program in the late 1980s. It was discovered that such a program would not function because of conflicting versions of rationality. Operating through instrumental rationality, MBO implicitly codifies internal standards for efficiency & quality by quantitatively measuring work activities; but the hospital staff had splintered into special groups with differing interests, which did not contribute to the hospital's mission. With emphasis on team leadership & cooperation, the reorganization of the hospital in 1991 featured communicative rationality. This is the optimal position for an organization that is neither conventionally bureaucratic (as in the public sector) *nor revenue-dependent* (as with the private sector). 53 References. (ITA)

An attempt is made to specify the theoretical dimensions of internal labor market (ILM) research, through a discussion of the relevant economic & sociological literature. A formal definition of ILM is presented that refers to two interdependent features of the mechanism of internal allocation of labor: *selection of insiders* (& *competition among them*) for positions at the intermediate & superior levels of job hierarchy, & their protection from outsiders' competition. Thus ILMs are seen as a device to relax constraints on labor productivity & *to foster the quantitative &* qualitative adequacy of workers' performance. However, since these constraints are intrinsically heterogeneous (workers' performances depending both on their skills & on their commitment), different explanations of ILM rationale are possible. Two explanations, ensuing from the institutionalist emphasis on skills acquisition, highlight ILM as a solution to constraints on the transferability of skills, or on dissemination of technological & organizational knowledge; a third, which includes both the radical & the transaction costs approaches, considers ILM as an effective answer to the problem of control of employees' behavior. Each of these explanations is examined critically, in terms of how well they can account for both features of ILM noted above. 71 References. ¶ Technological & spatial limitations to human interaction in organizations are examined. It is argued that communication design decisions require consideration of two fundamentally different conceptualizations of communication structure. Communication gradients are most appropriate for examining embedded elements, eg, physical features, information fields, & dispersion of actors; but network analysis is most appropriate for examining utilitarian elements, eg, role sets, mobility, & communication channels. Only a diverse approach to communication structure & communication processes will allow managers to take informed decisions about organizational design. 1 Table, 6 Figures, 33 References. ¶ Organizational, economic, & societal characteristics that create the need to generate both commitment & flexibility in employment relations are discussed. Organizational commitment results from structures that facilitate participation, integration, individual mobility & careers, & legitimacy. Committed workers are functionally flexible. ¶ "Modernized" production refers to the response of firms to the growing differentiation & variability of markets leading toward products that are more personalized & of higher quality. These changes are made possible by flexible, automated production systems, coordination between planning & production, use of the just-in-time principle, cooperation between suppliers & the final producer, & relocalization of production. In the German automobile industry, a key role is played by workers engaged as system regulators, who monitor the quality control of automated systems the success of the enterprise depends on achieving a consensus among the system regulators. Special attention is given to the role of labor unions, which in addition to working to achieve consensus, occasionally add a note of discord in the formulation of major policies within private firms. Seven innovations were observed. The Schroeder model demonstrated recognition of the untidy nature of the innovation process & yielded higher interrater reliability than the Zaltman model, but suffered from low accuracy scores. The Zaltman model demonstrated higher accuracy but suffered from loose definition of stages & limited applicability to real world situations. 1 Table, 2 Figures, 19 References. ¶ Organizational consulting & research ideally should shape the adaptation of organizations to experiences of changing strategies, competencies, or aspirations. Here, rather than using realism-driven social or political approaches, this ethnographic report focuses on the intellectual links between research & consulting. The differences between the two lie in incentive systems, social norms, & bases for competition & survival. However, because consulting incorporates a logic of engineering & problem solving, the description of parallels between consulting & research can inform research. It is noted that neither promotes the accumulation of individual experiences whenever ambiguous histories of nonautonomous events occur. Other problems involve adding discrete units of knowledge to an existing base, & learning from nonevents. The conjunction of consulting & research builds on both the pooling of experience across organizations & alternative ideas for interpreting experience. J. Sadler

¶ The potential biasing effects of social desirability response sets on organizational behavior research findings are examined. Metaanalytic review of 33 such studies reveals that social desirability, as traditionally measured, is moderately but significantly correlated with several widely used constructs in organizational behavior research. Replication of these results was attempted by administration of a questionnaire to 178 working Master of Business Administration students at a large, urban, midwestern university. Results indicate that the effects of impression management did not significantly change the relationship between organizational behavior variables. Social desirability was found to have only a moderating effect. Implications for the use of self-report questionnaires are discussed. 4 Tables, 77 References. Adapted from the source document.

¶ Organizational culture is currently in vogue as a subject of organizational theory; however, the way in which organizational cultures should be investigated empirically is largely ignored. Problems develop when organizational culture is viewed as the totality of common values & norms of the organization's components in terms of an interpretive paradigm understood only through the everyday knowledge of its members. Usually, qualitative instruments, eg, interviews, are used, but the question arises of how to formulate criteria for formulating a theory without restricting measurement tools to the respondents' everyday knowledge alone. A possible solution would be to develop an interactive process where the necessary operationalizations are made not before, but rather, during analysis. 2 Figures, 61 References. ¶ A discussion of new forms of externalities taking place at the territorial (ie, local/regional level) with focus on the cooperation between capital & labor in the production of collective goods, eg, training, solidaristic

wage policies, & labor flexibility & upgrading. Social & institutional local cultures are of utmost importance. As neoindustrial systems tend to territorially agglomerate their structures, such goods become more & more important; they cannot simply be produced at the enterprise or national levels, but at local & regional levels. Thus, "industrial objectives" & "regional economies" are a crucial unit of analysis in social sciences. European examples are sketched & policy implications developed. 1 Table, 29 References. AA

In recent literature on both prosperous industrial districts & declining ld industrial areas, two beliefs are recurring: local economic success is result of (1) the action of local economic actors, & (2) intensive cooper-tion among these actors. The idea of a necessary association between ommunitarian cooperation & economic success is critically discussed, uggesting that what matters in the explanation of economic success is ot the agreement on shared values as such, but the nature of shared val-es. Moreover, historical examples are proposed (from medieval com-nercial cities to modern mass production areas) of local economic suc-ess in the presence of low consensus & cooperation. In order to sketch lifferent possible types of local societies, two variables are considered: he number of local economic actors & the more or less local character f their task environments. A tentative typology is proposed, & special ttention is devoted to the type characterized by different forms of "re-gionalization of production." 10 References. AA

¶ It is suggested that current conceptions of organizational activity as ritual conformity (or isomorphism) to institutional demands in the environment should also incorporate an understanding of organizational enactment, which entails a conception of the environment in terms of active processes of reality construction & creating & defining institutional demands. Data obtained via interviews, document analysis, & evaluations by the State Division of Mental Health in NC are used to explore the responses of mental health organizations to outpatient commitment (OPC) of the mentally ill. Despite the status of OPC as a legal policy actively encouraged by the state, responses were highly variable. ¶ The "Trend Report on the Rationalization of Industry" is a research project begun in 1988 in the Federal Republic of Germany & scheduled for completion in 1990. Special attention is given to the use of highly skilled workers in automobile & chemical production. The emergence of system regulators as a new type of control worker is a key aspect of highly automatized industry & its competitive market strategies. It must be kept in mind that completely automatized processes do not exist: human intervention is always possible on many different levels. Thus, workers must have a high level of theoretical knowledge about the processes for which they are responsible. Implications for improving worker training & educational standards are reviewed. Also discussed is the impact of the new integrated tasks on traditional ideas of the division of labor. M. Meeks

¶ Discussed are the origins, evolution, & current situation of industrial relations in Brazil. The corporative labor organization that emerged in the early 1940s is described, as well as the role of government regulation in labor relations. Modifications in the system under military & populist governments & under the current redemocratization project are traced. Provisions in the new constitution have put an end to the government control of unions, increasing the possibility of strikes & changing the corporative nature of labor relations. Current tendencies indicate continuation in the direction of less state regulation, greater autonomy for labor organizations, more direct negotiation with firms, & unions that are more visible in the workplace. 16 References. ¶ Expanding on the recent managerialist literature, it is contended that both the motives behind the current spate of merger & acquisitions activity & postacquisition organizational changes are driven by synergistic factors. Case studies from Austria & the UK support this argument in controlled circumstances, but indicate that synergy is less important in explaining these strategies than are other factors, eg, levels of product-market congruency between acquiring & acquired companies, national location, & pre-acquisition organizational structures. By identifying work organization, industrial relations, & management systems as distinct processes, the different levels of, & resistance to, change in acquired companies is discerned. It is concluded that it cannot be assumed a priori that postacquisition change is inevitable across all organizational functions. 1 Appendix, 19 References. Adapted from the source document. Increasing work unit diversity was associated with lower levels of psychological attachment among group members. Nonsymmetrical effects were found for sex & race, with whites & men showing larger negative effects for increased unit heterogeneity than nonwhites & women. It surfaces significantly, if briefly, in his outline of three polycratic organizational forms: collegiality, mass democracy, & direct democracy. Polycratic organizational forms, therefore, can viably be situated in relation to Weber's typology of legitimate domination. ¶ The impact of leadership style on organization commitment, performance, role ambiguity, & subordinate satisfaction was examined through questionnaire data collected from 369 nursing home employees

in 37 different work groups in a western US state. Analysis indicates that, for the majority of relationships, individual ratings of leader behaviors played a larger role than group ratings in explaining subordinate attitudes. The same pattern was true of performance. The relationships between leader reward & punishment behaviors & attitudinal variables are discussed. 4 Tables, 23 References. ¶ A literature review reveals a diffuse consensus that the system of labor relations on a national level varies significantly in the degree to which the bargaining process between management & the unions assumes a participatory or conflictual character. Some have gone so far as to propose that the outcome is essentially that of a zero-sum game, where gains by one party invariably lead to losses for the other. Alternatively, the bargaining process may be seen as a method for resolving problems & conflicts when a common basis of interests is perceived between the two parties. Until comparatively recently, British industrial bargaining processes were heavily conflictual in character; government attempts to mediate a smoother process were not common. Contradictions in the bargaining process in the metalwork industry of GB during & immediately after WWI are discussed, noting that a largely conflictual model was followed after 1920. 39 References. Anheier, Helmut K. & Romo, Frank P., Modelle strukturellen Scheiterns in Policy-Netzwerken (Models of Structural Failure in Policy Networks), *Journal für Sozialforschung*, 1992, 32, 1, 33-60. (GER)

After reviewing prominent examples of failures & disasters in social & political networks, attention is focused on related processes, eg, breakdown, disintegration, stalemate, isolationism, & cliques. A new definition of structural failure is developed & applied to case studies evaluated with the aid of network-analytical methods. New insights are obtained into existing failure models for both inter- & intraorganizational settings. Possible implications for a theory of structural failure are reviewed. The clearest expression of organizations with institutionalized abandonment (collapse, disintegration) & articulation (coups, uprisings, mass movements) policies is that of political parties. Examples from recent Argentine & Italian political history are cited. It is concluded that analyzing how failures occur does not necessarily answer the question of why they occur. 4 Tables, 9 Figures, 1 Appendix, 62 References. Adapted from the source document.

A study of the structure of the discipline of communication, based on frequency of joint memberships in the International Communication Association's divisions & interest groups (N = 2,116 members of an average of 16 interest groups, according to the 1991 directory), suggests that the structure is more complex than previously suggested by bibliometric research. At least 2 dimensions differentiate the divisions/interest groups: one that separates the mass media & the interpersonally oriented divisions, & a second that differentiates the humanistic from the scientific. One method found a third dimension: theoretical to applied. Analysis based on number of joint memberships found 3 clusters: humanistic, mediated, & interpersonal. Another cluster analysis that controlled for group size found only 2: humanistic & scientific. Block modeling of joint memberships identified 4: humanistic, mediated, interpersonal, & information technology. 3 Tables, 3 Figures, 40 References. Adapted from the source document.

Respondents mentioned a total of 420 social network members, of which 42 were groups, including kin undifferentiated friends or neighbors, or more formally organized groups, eg, church groups & senior centers. ¶ Telephone survey data obtained in 1988 from a random sample of 1,912 adult residents of New York City's 5 boroughs are drawn on to explore the relationship between social networks & neighborhoods. The consequences of connected or dispersed social-network support for people of different incomes & races in terms of their views of their neighborhoods as desirable places to live are highlighted. Analysis indicates that, contrary to some previous literature on social support, social networks that are neighborhood-oriented & localized benefit rich New Yorkers

e than poor ones. Wealthier & white New Yorkers like their neighhoods better, regardless of the nature of their social networks, & nablacks, regardless of other factors, like their neighborhoods less. It oncluded that localized networks lead to an increased, though limited, ard for one's neighborhood, but cannot erase the negative effects of erse social & economic neighborhood conditions. 9 Tables, 13 References. n analysis is presented of interorganizational networks as an accomiment to structural changes in contemporary societies. Although the ic of exchange is the most important in many networks, under some ditions, the networks can function as negotiation systems where ieving a joint product is considered valuable. Such negotiation sysis can help resolve the coordination problems typical of contemporary ieties; eg, the Max-Planck Instit for Social Research is responsible for lyzing developments in the German system of health care & science. foundation laid by research & the emergence of consensus on health e issues in the former West Germany are invaluable in the reunifica- with the East. The role of achieving compromises in network logic mphasized, since cooperation is still possible even when contradictory interests are at play. This, in essence, is the challenge of modernity. 43 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

To investigate the relationship between techniques, worker organizan, & types of jobs in the Dutch construction industry, questionnaire ta were obtained from 20 private firms. Attention is focused on how use of different materials & methods of building exerts an effect on content of individual jobs. Analysis shows that the upsurge in the use prefabricated components & standardized materials leads to a dease in workers' qualification level. Additionally, workers have less ntrol on the job site. Increased specialization brings about additional visions in work organization. Results indicate that entrepreneurs xperience more stress & more health problems than managers, & are ss satisfied when: facing ambiguity in their work, worrying about veighty decisions, & experiencing conflicting demands between work & ome. ¶ Transition processes for typical, newly established labor-managed companies are analyzed. During various developmental stages, such firms can experience ideological changes. A literature review shows that many studies underestimate or ignore how: (1) pre-startup determines the firm's future; (2) changes in the social order can instigate transition processes; & (3) contradictions can occur in organizational culture due to new organizational or personal identities. The formalist adherence to established principles limits the growth potential of labor-managed firms. A more sophisticated perception of cooperation is needed in the area of traditional & alternative business values. 38 References. Adapted from the source document. ¶ In June 1913, the Portuguese press wrote very flattering obituaries for the millionaire José Maria dos Santos. Although he was praised as a self-made man, he owed his fortune to a large inheritance, which he had the foresight to invest in the local wine & olive oil industries. Special attention is given to the wealth accumulated by the São Romão family in Minho province, which was later passed on to Maria Cândida, dos Santos's future wife. The influence & wealth that he possessed provided easy access to the corridors of power, to intimate relationships with the economic & scientific elite, & to his many nominations to national agricultural commissions. A periodization shows three main phases in his accumulation of wealth: territorial consolidation, improved organization & modernization, & movement toward monopoly. 2 Tables, 2 Appendixes. M. Structured interviews conducted with representatives of 85 small & 34 arger firms in GB, supplemented by census & other statistical data, are lrawn on to investigate the development of Asian businesses in GB, with articular reference to the city of Bradford, focusing on a comparison of hose owned by Muslims vs non-Muslims (Sikhs & Hindus). Asian busiesses in Bradford have grown rapidly since their emergence in the late 950s, & there were an estimated 61,000 such businesses in the entire ounty by 1990. Muslim-owned businesses are: more likely to concenrate on the ethnic market, smaller than the average small business in erms of turnover & employment, & concentrated in areas of low profitbility. Muslims are also more likely to enter into business because of unmployment than for entrepreneurial reasons, & are underrepresented ompared to their proportion of the Asian population. This is attributed o their relatively lower socioeconomic status, which is in part deterained by cultural factors, namely the low participation of Muslim wom n in the labor force. Hence, contrary to the prevailing view in the literaare, it is concluded that culture has an indirect rather than a direct impact on entrepreneurship, & socioeconomic status is a better predictor of ntry into business. In addition, it is too simplistic to describe ethnic enrepreneurial strategies as either ethnic enclave or middleman minority. Tables, 1 Figure, 44 References. Adapted from the source document. Comments, 355-366.

¶ It is argued that advances in quantity & quality in research on consumer behavior over the past twenty-five years have occurred because of competitive market conditions & research infrastructure support. However, consumer research output has had an unimpressive impact on marketing practitioners, policymakers, & peer disciplines. Acrimonious debate has arisen regarding: whether the area needs more theory development or more empirical research, the process of theory development, & the domain of consumer research. The diversity in methodologies, frameworks, & settings has created an identity problem. It is recommended that consumer research continue to elicit respect & acceptance by emulating just one of the four science models--basic, arts, crafts, or policy-& by meeting its standards of excellence. In **Acrimony in the Ivory Tower: Stagnation or Evolution**, Richard P. Bagozzi (U of Michigan, Ann Arbor) agrees with Sheth in general, but stresses the need to avoid overmanaging the future direction of consumer research. More emphasis needs to be placed on metatheory, construct validity, theorizing & theory testing in the middle range, & choice. In **Appraising Consumer Research: There's More to Vision than Meets the Eye**, Dipankar Chakravarti (U of Arizona, Tucson) also agrees with Sheth, but cites limited resources in the field. Acrimony in the debate over the future is primarily due to the struggle to maintain insular perspectives & to the processes that produce efficient publication of research. 1 Figure, 22 References. M. ¶ National data from the World Values Survey, 1981-1983, are used to extend previous research on voluntary association activity among Canadians & Americans, employing multivariate controls for the potential confounding effects of sociodemographic differences across the populations. Findings are used to assess Seymour Martin Lipset's thesis that cultural factors, rather than socioeconomic or demographic influences, largely explain Canadian-American differences in voluntary activity (eg, see *Continental Divide: The Values and Institutions of Canada and the United States*, New York: Routledge, 1990 [see abstract in IRPS No. 68 in SA 41:3]). Controlled comparisons show some group differences in the number of nominal memberships, with Americans ranking highest as Lipset predicts. Few differences exist, however, if active memberships are considered. Lipset's thesis receives some support in a supplemental analysis, which reveals that Americans are the most likely to say they would like to engage in more voluntary activities if they had more spare time. 4 Tables, 25 References. ¶ The growth in Quebec of community-service volunteer groups reflects a neoliberal disengagement from the state, related directly to the financial crisis in the public sector. Examined here are the theoretical & practical implications of the neoliberal concept following three lines of thought: (1) the conjectural factors of the 1980s crisis clarify the conditions for the emergence of a neorealism; (2) the study of the new partnership between the state & volunteer organizations facilitates the understanding of ideological metamorphosis; & (3) analysis of actors' strategies, eg, benevolence & spontaneous initiative, reveals the values of moralization, meritocracy, & humanism as part of a new world vision. 34 References. ¶ For most nonprofit organizations, the selection process for determining the best individual prospects for capital campaigns or annual fund drives are ad hoc & intuitive. Here, two statistical models developed from the alumni database (N = 190,000) at Northwestern U (Ill) are presented for both major gifts & annual fund prospects. One model predicts which individuals will give $100,000+ over three years, & the other, $1,000+. The analysis combines geodemographic data with the internal data typically found in alumni databases. A metric is presented to test the viability of the models when compared to single-criterion models. Findings show that past giving is the strongest single factor in predicting future giving. However, full models provide superior overall results. 2 Tables, 6 Figures, 5 References. Adapted from the source document. (Copyright 1993, Sociological Abstracts, Inc., all rights reserved.)

However, people working in nonprofits are just as concerned that their employers will "take advantage" of them &, in contrast to the 1977 survey, are no more psychologically committed to their organizations than are people in the other sectors. 5 Tables, 23 References. Analysis indicated that the groups did not differ on death anxiety, but experienced volunteers scored higher than trainees & controls in coping with death. On the self-efficacy scale, all hospice volunteer groups believed themselves more able to deal with death than controls. Andor, László (U Economics, Budapest Hungary), **Transition and Privatization in Hungary,** *Socialist Alternatives,* 1992, 1, 2, spring, 67-82

¶ The history of the political & economic reform process in Hungary, from the early 1960s to the present, is reviewed, focusing on political events that led to a policy of wholesale privatization. Current struggles over ownership rights are discussed with regard to four key political groups, the Socialist party, the Alliance of Free Democrats, the Entrepreneurs' party, & the Small-Holders' party. It is argued that Hungary's privatization project is justifiable only on the grounds that the International Monetary Fund would not continue to finance the country's reform efforts without Hungary's adoption of a policy of privatization. Bagachwa, M. S. D., **The Role of the Intermediate Industry Section in Tanzania,** *African Journal of Sociology,* 1990, 3, 2, May, 1-25.

¶ Development in less developed countries has generally been approached using a two-sector model, with traditional & modern sectors. Small-scale activities–handicrafts, cottage industry, repair services, etc are viewed as an intermediate sector contributing little to raising output & productive employment. However, in a comparison of technological differences between intermediate (1-49 employees)- & modern (50+ employees)-sector activities during the 1960s & 1970s in the Arusha region of Tanzania, it is shown that intermediate-sector industries are more labor-intensive & therefore have the potential to generate more employment per unit of investment. Policy for both employment creation & output expansion should promote intermediate-sector activities & provide them with better access to the formal credit market, more technical assistance, & infrastructure. 10 Tables, 1 Appendix, 38 References. ¶ Psychoanalytic strategies for effecting social change are explored, & a psychoanalytic perspective that stresses the subjectivity & disclosure of desires is developed. Drawing on Lacanian ideas, it is suggested that social change is best attained through the promotion of new forms of discourse, which entail new types of social relations. Weaknesses in revolutionary, utopian, & authoritarian frameworks for social change are discussed, & these frameworks found guilty of ignoring a fundamental component of social change: motivation at the individual level. The Lacanian account of motivation is explicated & applied to several social problems (teen pregnancy, drug abuse, prejudice) to illustrate its utility in effecting social change through psychoanalysis. 15 References. Coleman, James S. (Dept Sociology U Chicago, IL 60637), **The Rational Reconstruction of Society,** UM *American Sociological Review,* 1993, 58, 1, Feb, 1-15.

¶ This Presidential Address to the 1992 annual meeting of the American Sociological Assoc describes a transformation–which began in the eighteenth century with the French & Industrial Revolutions, & continues to this day–that is characterized by the decline of primordial institutions based on the family as the central element of social organization & the replacement of these institutions by purposively constructed organization. Sociology is a product of this transformation, & reflects the stages of it in the central foci of sociological theory & research. The decline of primordial social organization has been accompanied by a loss of informal social capital on which social control formerly depended. The design of purposive organization is necessary to compensate for this loss; this design is an emerging central focus for sociology. The example of "bounties on children" is offered to illustrate this point. 1 Table, 4 Figures, 36 References. Adapted from the source document. ¶ With a focus on Hungary, it is suggested that autonomous subsystems & their associated social institutions must exist for a market economy to thrive in the wake of totalitarian rule. The ideological basis of the previous regimes must be eliminated, including a shift away from heavy industry & subsidization, toward privatization & consumer goods. The current development of a marginalized population is due to high unemployment rates, discrimination against the poor, & reverse targeting in the form of tax incentives to big business. Factors shaping social policy are summarized, highlighting the changing role of the state, the rise of regionalism, & the absence of the Left. Finally, implications of the economically conservative ideology favoring less expensive solutions to poverty, unemployment, homelessness, & hunger are examined. 9 Tables, 24 References. J. Tertiary services, especially those closely tied to economics, emerge as a privileged sector & continuous rebuilding strategy or production. In this light, the category of space is emphasized as a new element providing a basis for identifying new processes & global patterns. 1 Table, 30 References. M. ¶ Assuming that the hallmarks of modernity are subjectivity & individuality, the origins of modernity can be found in the Western feudal systems after the twelfth century. Writings of different medieval theologians, from St. Augustine to St. Thomas Aquinas to William of Ockham, are cited in a reconstruction of the transformations of the feudal system & its thought. It is shown that, with the development of cities & increased circulation of merchandise & money, the agrarian collective identity was destroyed; in its place, the subject was constituted. In the feudal system, establishment of personal loyalties replaced blood ties, & the growth of social differentiation served to highlight individuality. Extrapolated from this examination of the origins of modernity are insights into the current debate about modernity & postmodernity. 72 References. Adapted from the source document.

¶ In less-developed countries, many local development projects, particularly those aimed at poverty alleviation or the prevention of further socioeconomic inequality, require the target group to somehow pool resources. It is argued here that various ideal types of pooling should be distinguished, each with its own rules with regard to voluntariness, participants, contributions, & rewards, & that the difference in rules is related to the need to prevent free riders & maintain equity. This structural theory is then used to illustrate & explain many of the pooling problems encountered by development projects. 1 Figure, 37 References. Adapted from the source document.

¶ Examined is whether GB is in economic decline or merely weathering the effects of a long economic cycle from which it will prosperously emerge. Historiographical works that attempt to account for GB's problematic development are discussed, & the way in which GB's decline has been perceived & defined politically is explored. Consideration is also given to the "backwardness thesis," which explains why growth rates differ by postulating that once societies attain the threshold required for self-sustaining development, the countries furthest behind will have the highest rates of growth, because they enjoy the advantages of the latecomer. These advantages include a powerful incentive to transform attitudes & institutions, an ability to borrow from the highest developed countries' organizational frameworks & technology, & the existence of a large surplus population, which can be tapped to enhance productivity. Several explanations of GB's economic decline are assessed. 21 References. W. Howard

¶ The definition, measurement, & evolution of the concept of development is examined. The term is used both descriptively & normatively, & ambiguously refers to goals or to means for reaching goals. Moreover, developmental practice has oscillated from a one-dimensional pursuit of economic growth to comprehensive social engineering to transform social structures. Development was long considered an unalloyed good. As attendant social, cultural, ecological, & human costs become more evident, however, it is increasingly viewed as a two-edged sword, simultaneously creating & destroying values. More importantly, development engenders value conflicts over the meaning & content of the good life, the basis of justice in society, & the criteria governing the stance of human societies toward nature. 44 References. ¶ It is maintained that problems of ethnic-national revival & conflict are reemerging with new force in the modern world, especially in Europe. In contradiction to theories of modernization, which maintain that ethnic identification belongs to traditional patterns alien to the modern world, three structural bases of ethnic-national identification & mobilization are discussed: common language, common religion, & economic interdependency. It is argued that there is no necessity for ethnic conflicts to arise when people with differences in these structural characteristics are living together. Other factors related to the political steering of ethnicity & nation are also identified: acts of foundation; religious, intellectual, & political leaders; & self-evolving spirals of distrust & violence. Only by incorporating these actors & processes into a dynamic theory of ethnicity & natural mobilization can the resurgence of ethnic conflicts in the modern world be understood. The process of European integration & the role of small nations therein are also considered, arguing that a European constitution has still to be developed that can account for: (1) a concept of a political unit based only on political will, but not on ethnic criteria, & (2) the high degree of asymmetry that exists between the members of the European Community in terms of social & economic size & power. 5 Tables, 26 References. Social problems have emerged from deficient health conditions, lack of food supplies, & ethnic & religious conflicts, along with economic problems related to low industrialization level, massive urban-rural migration, & rural poverty. progress toward achieving a unified economy was stalled. Topics include: social security systems; redefined differences within an expanded market; the status of industry; prospects for consumers; & to industrial policy. The importance of European integration in sociological research is stressed. Europe should no longer be seen as a collection of separate social systems; rather, the methods by which different nations interact will become the focus of study. ¶ Postindustrial societies often implement public works projects to break cycles of massive unemployment or to employ the people least able to compete in a tight job market. The US has the most experience in this area, accumulated since the New Deal. Despite the impressive achievements of La Guardia Airport & Central Park in New York City, many economists deny the long-term economic benefit of public works. It is expected that public works projects would not be helpful under the extreme economic conditions currently facing Croatia; rather, strategies are needed that will lead to the highest engagement of human resources under strict professional supervision. Attention must be given to the structure of the unemployed population, consisting largely of women, professionals, & urban residents. 21 References. Adapted from the source document

The S was tape-recorded at approximately two-week intervals during everyday activities from age 3:6 to 5:0. The S's choice of code was found to depend on who he was speaking with at a particular moment (eg, he spoke Cantonese to his parents, but English to his sister & their maid). It was noted that code-mixing occurred as a means of emphasizing an utterance. It is suggested that there are four stages involved in the progression from word comprehension to internalized control of the words. 14 References. Adapted from the source document.

¶ A discussion of ways that the strategy of economic growth with exclusionary politics in South Korea was undermined by the very success of its industrialization policy. It is argued that the 1987 political liberalization of South Korea resulted from popular pressures applied to the authoritarian regime. The social force behind this democratization is defined here as mass populism rather than class struggle. The different roles of social classes in the regime transition are identified, showing that the working class was weaker in comparison to the protagonist role of university students & to the progressive elements of the middle class. Although South Korea's ongoing democratization sometimes shows signs of retrogression, its experience demonstrates that participatory democracy can accompany economic development & industrialization. 48 References. ¶ From 1918-1988, government relations with the US auto industry were largely determined by the interplay of two forces–social constraints on the auto industry's political influence & economic conditions that opened the government to auto industry lobbying. From its birth to 1966, the auto industry dominated transportation & auto policy. In the 1960s, federal regulation of auto-related social concerns, eg, safety, emissions, & fuel economy, emerged. Government dependence on the large auto industry corporations & huge financial losses in the industry in 1979/80 caused the government to ease pressure on social concerns. The industry was able to increase its political influence & gain policy concessions. The importance of locating the dynamics of the policy process in a larger economic & ideological context is discussed. D. Generoli

A Commentary on the Debate over the Debt Crisis and Economic Problems) see SA 41:2/93Z7747), it is noted that Andreassen's analysis (based on Lars Gulbrandsen's arguments (reference not specified)) is equally faulty. Both use averages instead of citing empirical data to link the development of certain economic problems in marginal social groups with the debt crises in Norwegian households. Other methodological errors include omitting credit collection & financial industry statistics, using a different scope of the dependent variables, & using cross-classifications vs logistic regression. It is argued that the 1980s reforms contributed in part to the problems, which refutes Andreassen's analysis of the implications for the indebted household. 1 Table, 20 References. Data from the UN Development Program (UNDP) are drawn on to illustrate the unequal development of Third World capitalist societies & planned economies. It is shown that despite the clear overall economic superiority of world capitalism, transitional societies surpass them in terms of life expectancy, literacy rates & points for the global Human Development Index of the UNDP. It is suggested that analysis of Mexico's Wc can suggest strategies that democratizing Eastern European countries might use to make economic changes more smoothly. To this end, wages, living conditions, trade unions, & political rights in Mexico are explored. W. Howard

¶ After ten years of redemocratization & economic crisis in Portugal, the situation of labor vis-à-vis capital during the rule of the Social Democratic Party under Cavaco Silva starting in 1986 is examined. In disputes between workers & industry leaders, the government favored big business. Despite intervention by the Permanent Council for Social Concertation, labor continued to fight unsuccessfully for labor law reforms. The advocates of labor law reform yielded to the interests of industrial capitalists, thereby setting the precedent for a new industrial relations model. Thus, labor's stance has become politicized & institutionalized. Adapted from the source document.

¶ A challenge is raised to the contention that rapid mineral-led economic growth & drought in the rural economy have led to a severe worsening of the plight of the rural population in Botswana, with rural household income collapsing & income inequality worsening pronouncedly. Official statistical data on household incomes 1974-1986 show that income distribution remained stable & did not experience significant decline as a result of drought conditions. Government income policy & comprehensive drought relief support, along with the direct & indirect benefits of rapid employment growth, are seen as the explanatory factors in this macroeconomic policy success. 4 Tables, 2 Figures, 32 References. ¶ An investigation of how the primary stakeholders in European industrial politics manage both their traditional ambitions & new dependencies. Two types of interdependence are noted: (1) competitive & (2) symbiotic. Players in the game of industrial politics face problems of representativity (eg, how to maintain internal cohesion & mobilization capacity) & reciprocity (eg, coordinating external discipline & maneuverability with stakeholder interests). A bottom-up approach is suggested, focusing on the strategies & tactics of the players themselves to achieve an explanation of industry's political commitments on the meso- & macrolevels. Various contradictions are seen in the simultaneous application of regional & global cluster strategies. Perhaps stakeholders seek a trade-off in terms of diminishing returns from corresponding coalition- & alliance-formation processes. Theoretical orientations that explain consumption in terms of status maintenance or status enhancement are challenged, & Thorsten Veblen's theory of conspicuous consumption is criticized for stressing pecuniary strength over character. It is argued that consumption is best approached by treating "character" as the name for the entity that individuals consciously strive to create out of the raw materials of their personhood & out of their consumption behavior. It is concluded that consumption is best studied, not by analyzing behavior, but by outlining the character ideals extant for the particular historical period under consideration. 14 References. W. queried 741 youth of the same age in Ottawa, Ontario, & St. John's, Newfoundland; interviews with key policymakers at the provincial & local level were also carried out. Results show that youth in both countries displayed "individualistic" interpretations of the labor market, although general commitment to work was less marked in the GB sample, which also showed greater ambivalence toward work than did their Canadian counterparts. ¶ After reviewing how the agora, the market, public main streets, & other places of commerce have historically functioned as traditional sites for interpersonal interaction, it is argued that the development of strip malls, shopping malls, mail order alternatives, & the electronic options provided by the computer, telephone, & fax have radically altered the life & commerce of the street. In particular, shop-at-home TV has become a billion-dollar industry in the US. Explored here are the nuances & implications of this electronic transformation of the marketplace. 60 References. ¶ Using data from the Public Use Microdata Sample of the 1980 Census for undocumented Mexican immigrants & 8 other ethnic groups from Los Angeles (Calif) County, undocumented Mexicans are shown to have had much lower levels of human capital than people in other ethnic groups. Similarly, their position with respect to occupation, industry, & class was found to be more distinct from the total work force than that of any other ethnic group. The position of undocumented Mexicans was found to be similar to legal Mexican immigrants & other Hispanics born outside the US. Implications of a continued influx of undocumented Mexican immigrants for other ethnic groups are explored. 8 Tables, 18 References. Modified AA

¶ Although the norms established by the European Community (EC) have a tremendous effect on the consumer, little has been done in the area of consumer protection. Here, attention is focused on current regulation procedures. In the 1960s & 1970s, regulatory activities were overly ambitious & time-consuming. During the 1980s, dialogue increased between consumers & producers in the area of regulation, & production standards were imposed. The resulting regulations occupy the intermediate area between the legal & private spheres. Advantages & disadvantages that these new regulatory strategies will usher in for consumers are enumerated. 4 Figures, 68 References. Adapted from the source document.

¶ Changes in homemaking & consumption patterns in Sweden are examined, focusing on: the origins & validity of the consumer revolution, problems with consumption studies, the process by which consumer skills are learned, & Swedish consumption patterns throughout the twentieth century. It is argued that homemaking has become closely related with the process of identity formation. This is illustrated via a discussion of twentieth-century trends in Swedish interior design & through an analysis of the process by which the phenomenon of modern living came into being. It is concluded that consumption in postmodernity ought to be viewed as a form of cultural production in which the consumer is an active agent & creator of new cultural & symbolic forms. 7 Figures, 28 References. ¶ The impact of using Arab vs Asian expatriate workers on Kuwait's development is examined through application of the Dutch disease model & regression analysis of Kuwait's economic sectoral outputs. Results suggest that Asian workers made weak positive contributions to agricultural output & fishing while Arab workers made strong contributions to food production, textiles, paper products, petroleum refining, & private services. Overall, the Asian expatriate workforce made much less positive contributions to the country's expansion than Arab expatriate workers, indicating that Arabization coincides with Kuwait's economic objectives. 8 Tables. ¶ To investigate changes in Czech household economic behavior during the transition from communism to capitalism, questionnaire data were

obtained from representative samples of adults (N = 1,700) in 1991/92. Analysis of strategies & adaptability patterns (primary job, second job, entrepreneurship, working at home, assistance from friends, & reduced consumption) shows a shift away from defensive strategies toward more active adaptation modes. Performance & achievement strategies are emerging with short-term perspectives. Overall, a negative outlook is discernable for the foreseeable economic future in terms of expectations, professional self-confidence, skill assessment, strong/defensive informal outlooks, & household orientations. 8 Tables, 5 References. ¶ In France, the term "consumer" recently achieved the legitimacy of a political label, ie, an institutionalized conceptualization of the consumer's interests & rights. A historical review of the consumer's status since the beginning of the twentieth century is provided. An ethnographical-type analysis of the ordinary work in the Ministry of Consumer Affairs was conducted 1983-1985 to explore the social significance of the new label. Discussed are the ministry's agenda & its relations with consumer organizations. It is suggested that the administration operates mainly in the area of shaping & modifying consumer-related concepts, eg, rights, quality, & consumer information. Adapted from the source document. ¶ The significance of status processes for generating & reproducing hierarchy among producers in a market is explored, developing a conception of a market as a status order in which each producer's status position circumscribes the producer's actions by providing a unique cost & revenue profile for manufacturing a good of a given level of quality. An examination of pricing behavior among investment banks in the underwriting of corporate securities, utilizing industry data on the investment grade debt market, 1982-1987, provides empirical support for this status-based model of market competition. 3 Tables, 3 Figures, 1 Appendix, 56 References. ¶ The role of small-scale manufacturing in eighteenth-century England is investigated through examination of the nonfactory, small- & medium-scale industry of the English metal trades, particularly those of Birmingham & Sheffield. Insurance and probate records of the eighteenth century reveal the existence of a dynamic core of small & medium producers characterized by multiple production units, specialization, division of labor, & networking within a workshop economy. During the early nineteenth century, the economic position of the small to medium producers eroded, leaving a rift between small & large producers & fueling historical myths of artisan & factory production. 6 Tables. ¶ To explain why the wealthy are not only rich (they exercise purchasing power) but powerful as well (they command obedience) in liberal socie ties characterized by a competitive market capitalist economy, the politi cal structure arising from competitive exchanges in a capitalist economy are defined. It is demonstrated that, under quite general conditions, the holders of substantial wealth are powerful in the sense that they can fur ther their interests through the credible use of sanctions against others.

the common representation (in both liberal political philosophy & nic theory) of at holds that voluntary exchanges as devoid of asymal power relationships is shown to be false. By contrast, a microeic model is elaborated of the endogenous enforcement of claims from exchange & the consequent nonclearing nature of competiarket equilibria. Several potential global crises are identified: the deepening economic chasm between developed countries in the northern hemisphere & underdeveloped ones in the South; development's adverse environmental effects; the world population explosion; & the rapidly expanding world arms market. ¶ The decline of US power & the collapse of Marxism-Leninism as ideology are examined, focusing on the significance of the development of the Pacific region, the economic decline of the US, & the future direction of the capitalist world economy. It is argued that the development of a grand US-Japan alliance in the Pacific region, in tandem with a smaller but no less important European economic alliance, constitutes the fourth great expansion of the capitalist world economy. This expansion not only will increase the numbers of people fleeing Third World countries for refuge in First World ones, but also will deepen the division between the underdeveloped southern hemisphere & the northern one, with its economic power & large welfare apparatuses. Of the restructurings of the world system currently under way, the most unpredictable & potentially destabilizing is the transformation of antisystemic movements & the search by them for new ideologies.
